map of america midwest: *A History of America in 100 Maps* Susan Schulten, 2018-09-21
Throughout its history, America has been defined through maps. Whether made for military strategy or urban reform, to encourage settlement or to investigate disease, maps invest information with meaning by translating it into visual form. They capture what people knew, what they thought they knew, what they hoped for, and what they feared. As such they offer unrivaled windows onto the past. In this book Susan Schulten uses maps to explore five centuries of American history, from the voyages of European discovery to the digital age. With stunning visual clarity, *A History of America in 100 Maps* showcases the power of cartography to illuminate and complicate our understanding of the past. Gathered primarily from the British Library's incomparable archives and compiled into nine chronological chapters, these one hundred full-color maps range from the iconic to the unfamiliar. Each is discussed in terms of its specific features as well as its larger historical significance in a way that conveys a fresh perspective on the past. Some of these maps were made by established cartographers, while others were made by unknown individuals such as Cherokee tribal leaders, soldiers on the front, and the first generation of girls to be formally educated. Some were tools of statecraft and diplomacy, and others were instruments of social reform or even advertising and entertainment. But when considered together, they demonstrate the many ways that maps both reflect and influence historical change. Audacious in scope and charming in execution, this collection of one hundred full-color maps offers an imaginative and visually engaging tour of American history that will show readers a new way of navigating their own worlds.

Calvin Alexander Jr., 2020-12-01 This book discusses the karst and pseudokarst of the Upper Midwest, USA, consisting of the states of Minnesota, Wisconsin, Iowa, and Illinois—the first regional synthesis in 40 years. Starting with an overview of the regional geology of what is largely glaciated fluviokarst and paleokarst developed on Paleozoic carbonates, but including other lithologies such as the St. Peter Sandstone and the Ft. Dodge Gypsum, the caves, springs, sinkholes, and karst hydrogeology of each state are described. Special attention is devoted to the region's longest caves: Coldwater Cave, Mystery Cave, and the Minnesota Cave Preserve caves. Application of tools such as data loggers and LiDAR, with new conceptual models such as hypogenic speleogenesis, has been transformative here. Special topics include lead and zinc mining in the Driftless Area, vertebrate and invertebrate cave fauna near the Laurentide ice limit, the impact and policies of nutrient and herbicide intensive modern agriculture on karst, and paleoclimate studies. The discovery, exploration, institutional history of caving organizations, and show caves of the Upper Midwest, from the year 1700 onwards, are brought up to date. The top 10 historical paradigms of cave and karst science in the Midwest are reviewed. Perspectives on paleontology, archeology, and Native American rock art are included.

Check it out." —James Fallows, *The Atlantic* A Commonweal Notable Book of 2020 Finalist, Midwest Independent Book Award Winner, Independent Publisher Awards Bronze Medal What does the future hold for the Midwest? A vast stretch of fertile farmland bordering one of the largest concentrations of fresh water in the world, the Midwestern US seems ideally situated for the coming challenges of climate change. But it also sits at the epicenter of a massive economic collapse that many of its citizens are still struggling to overcome. The question of what the Midwest is (and what it will become) is nothing new. As Phil Christman writes in this idiosyncratic new book, ambiguity might be the region's defining characteristic. Taking a cue from Jefferson's grid, the famous rectangular survey of the Old Northwest Territory that turned everything from Ohio to Wisconsin into square-mile lots, Christman breaks his exploration of Midwestern identity, past and present, into thirty-six brief, interconnected essays. The result is a sometimes sardonic, often uproarious, and consistently thought-provoking look at a misunderstood place and the people who call it home.

Townsend, 2016-06-28 A stunning survey of the indigenous art, architecture, and spiritual beliefs of the Americas, from the Precolumbian era to the 20th century This landmark publication catalogues the Art Institute of Chicago's outstanding collection of Indian art of the Americas, one of the foremost of its kind in the United States. Richard Townsend and Elizabeth Pope weave an overarching narrative that ranges from the Midwestern United States to the Yucatán Peninsula to the heart of South America. While exploring artists' myriad economic, historical, linguistic, and social backgrounds, the authors demonstrate that they shared both a deep, underlying cosmological view and the desire to secure their communities' prosperity by affirming connections to the sacred forces of the natural world. The critical essays focus on topics that bridge traditions across North, Central, and South America, including materials, methods of manufacture, the diversity of stylistic features, and the iconography and functions of various objects. Gorgeously illustrated in color with more than 500 vibrant images, this handsome catalogue serves as the definitive survey of an unparalleled collection.

map of america midwest: *The History of Cartography, Volume 6* Mark Monmonier, 2015-05-18 For more than thirty years, the History of Cartography Project has charted the course for scholarship on cartography, bringing together research from a variety of disciplines on the creation, dissemination, and use of maps. Volume 6, *Cartography in the Twentieth Century*, continues this tradition with a groundbreaking survey of the century just ended and a new full-color, encyclopedic format. map of america midwest: Fighting Invisibility Monica Mong Trieu, 2023-03-17 In *Fighting Invisibility*, Monica Mong Trieu argues that we must consider the role of physical and symbolic space to fully understand the nuances of Asian American racialization. By doing this, we face questions such as, historically, who has represented Asian America? Who gets to represent Asian America? This book shifts the primary focus to Midwest Asian America to disrupt—and expand beyond—the existing privileged narratives in United States and Asian American history. Drawing from in-depth interviews, census data, and cultural productions from Asian Americans in Ohio, Wisconsin, Nebraska, Minnesota, Illinois, Iowa, Indiana, and Michigan, this interdisciplinary research examines how post-1950s Midwest Asian Americans navigate identity and belonging, racism, educational settings, resources within co-ethnic communities, and pan-ethnic cultural community. Their experiences and life narratives are heavily framed by three pervasive themes of spatially defined isolation, invisibility, and racialized visibility. *Fighting Invisibility* makes an important contribution to racialization literature, while also highlighting the necessity to further expand the scope of Asian American history-telling and knowledge production.
