

required practicals aqa chemistry

Required practicals AQA chemistry are fundamental components of the GCSE Chemistry curriculum, designed to develop students' practical skills and deepen their understanding of key scientific concepts. These practicals are essential for exam success, as they not only assess practical competence but also reinforce theoretical knowledge. In this article, we will explore the various required practicals outlined by AQA, their purpose, the techniques involved, and tips for effective preparation.

Overview of AQA Chemistry Required Practicals

The AQA GCSE Chemistry specification mandates that students are familiar with a set of core practicals. These practicals are intended to develop skills such as planning experiments, collecting accurate data, analyzing results, and evaluating methods. The practicals are grouped into different categories, covering areas such as chemical reactions, quantitative analysis, and practical techniques.

List of Required Practicals

The key required practicals according to AQA are as follows:

- Practical 1: Making salts from acids and soluble base, insoluble bases, or metals
- Practical 2: Preparing a soluble salt from an acid and an insoluble base
- Practical 3: Investigating the effect of changing the temperature on the rate of chemical reaction
- Practical 4: Investigating the effect of changing the concentration on the rate of reaction
- Practical 5: Investigating the effect of changing the surface area of a solid reactant on the rate of reaction
- Practical 6: Investigating the effect of catalysts on the rate of reaction
- Practical 7: Investigating the pH change during a reaction (e.g., acid-alkali titration)
- Practical 8: Measuring the energy change during a chemical reaction (e.g., combustion of alcohols)
- Practical 9: Investigating the composition of formulations (e.g., checking the purity of a sample)

Each practical aims to develop specific skills and understanding, which are crucial for both exams

and practical competence.

Detailed Explanation of Key Practicals

Practical 1: Making Salts

This practical involves reacting acids with soluble bases, insoluble bases, or metals to produce salts. It introduces techniques such as:

- Measuring and mixing acids and bases accurately
- Filtering to separate solids from solutions
- Crystallization to obtain pure salt crystals

Purpose: To understand acid-base reactions and learn techniques for preparing salts.

Tips for Success:

- Use appropriate safety precautions, such as gloves and goggles.
- Ensure accurate measurement of reactants.
- Be patient during filtration and crystallization processes.

Practical 2: Preparing a Soluble Salt from an Acid and Insoluble Base

This builds on Practical 1 but focuses on producing a specific salt, such as copper sulfate. The process involves:

- Reacting an acid with an excess of insoluble base (e.g., metal oxide or carbonate)
- Filtering to remove unreacted solids
- Evaporating the filtrate to crystallize the salt

Purpose: To understand stoichiometry and techniques for obtaining pure salts.

Tips for Success:

- Use excess insoluble base to ensure complete reaction.
- Carefully control heating to prevent boiling over or decomposition.
- Handle acids and bases with care.

Practical 3: Effect of Temperature on Reaction Rate

In this investigation, students measure how changing temperature affects the speed of a reaction, such as the reaction between sodium thiosulfate and hydrochloric acid.

Key Techniques:

- Using a water bath or controlled heating
- Timing the reaction's progress
- Using a black cross or turbidity to measure reaction completion

Purpose: To understand collision theory and the effect of temperature on kinetic energy.

Tips:

- Maintain precise temperature control.
- Repeat measurements for accuracy.
- Record data systematically.

Practical 4: Effect of Concentration on Reaction Rate

Students investigate how varying the concentration of reactants influences the rate of reaction.

Method:

- Prepare solutions with different concentrations
- Measure the time taken for a visible change (e.g., precipitate formation)
- Plot graphs to analyze the relationship

Purpose: To explore how particle frequency affects reaction speed.

Tips:

- Use accurate volumetric measurements.
- Keep other variables constant.
- Repeat for reliability.

Practical 5: Effect of Surface Area on Reaction Rate

This practical involves changing the surface area of a solid reactant (e.g., marble chips) and observing the impact on reaction rate.

Method:

- Use different sizes/shapes of the solid
- Measure the rate via gas evolution or other indicators
- Control other variables such as temperature and concentration

Purpose: To understand how surface area influences collision likelihood.

Tips:

- Use consistent measurements for comparison.
- Record the amount of gas evolved over time.

Practical 6: Effect of Catalysts on Reaction Rate

Students investigate how catalysts, such as manganese dioxide, affect reaction speed.

Method:

- Compare reaction times with and without the catalyst
- Use reactions like hydrogen peroxide decomposition

Purpose: To understand catalytic action and activation energy.

Tips:

- Ensure uniform conditions across trials.
- Observe and record reaction times accurately.

Practical Techniques and Safety considerations

Practical work in chemistry requires careful technique and adherence to safety protocols:

- Always wear safety goggles, gloves, and lab coats.
- Handle acids, bases, and other chemicals with care.
- Work in a well-ventilated area or under a fume cupboard.
- Dispose of chemicals responsibly, following school guidelines.
- Use appropriate glassware and equipment, and ensure it is clean.
- Be precise in measurements to obtain reliable data.

Preparing Effectively for Required Practicals

To excel in practical assessments, students should:

1. Understand the purpose and method of each practical.
2. Practice common techniques, such as titrations, filtration, and heating.
3. Learn how to record data accurately and systematically.
4. Develop skills in analyzing and evaluating results.
5. Familiarize themselves with safety procedures and equipment handling.

Additionally, reviewing practical work through practice questions, watching demonstration videos, and participating in supervised laboratory sessions can boost confidence and competence.

Conclusion

The required practicals for AQA GCSE Chemistry form a crucial part of the scientific education, bridging theoretical knowledge with hands-on experience. Mastery of these practicals not only prepares students for exams but also lays a solid foundation for further scientific study. By understanding the purpose, techniques, and safety considerations of each practical, students can develop the skills necessary to carry out experiments confidently and accurately. Remember, consistent practice, attention to detail, and a thorough understanding of the underlying chemistry principles are key to success in both practical assessments and in developing a genuine appreciation for the scientific method.

Frequently Asked Questions

What are the main required practicals for AQA Chemistry GCSE?

The main required practicals include investigating simple rates of reaction, identifying ions using tests, preparing salts, measuring pH changes, and investigating the effect of temperature on reaction rates.

Why are the required practicals important for AQA Chemistry students?

They help students develop essential practical skills, understand core concepts, and prepare for assessments where practical knowledge is assessed directly or through application questions.

How should students prepare for the required practicals in AQA Chemistry?

Students should understand the purpose, method, safety precautions, and expected results of each practical, and practice performing the experiments carefully to ensure accurate and reliable data collection.

Are the required practicals the same for all AQA Chemistry GCSE science papers?

Yes, the required practicals are consistent across the combined and separate sciences, ensuring a standardized practical knowledge base for all students.

Can students be assessed on their practical skills during the AQA Chemistry GCSE exams?

Yes, practical skills are assessed through questions based on the required practicals, including interpreting data, explaining procedures, and troubleshooting experimental setups.

Additional Resources

Required Practicals AQA Chemistry: A Comprehensive Guide

Understanding the required practicals in AQA Chemistry is essential for students aiming to excel in their exams. These practicals not only form a core part of the syllabus but also develop vital scientific skills such as planning, analysis, and evaluation. This guide delves into each required practical, providing detailed explanations, methodologies, common pitfalls, and tips for success.

Introduction to Required Practicals in AQA Chemistry

The AQA Chemistry specification mandates a series of practical activities designed to reinforce theoretical knowledge through hands-on experience. These practicals are integral to understanding fundamental concepts, and mastery of them often forms the basis of exam questions. Unlike traditional coursework, these are "required" practicals, meaning students should be familiar with their methods, purposes, and potential variations.

Key Objectives of the Practical:

- Develop practical scientific skills such as accurate measurement, planning, and safety awareness.
- Understand the principles behind chemical reactions and processes.
- Interpret experimental data effectively.
- Recognize sources of error and suggest improvements.

List of Required Practicals in AQA Chemistry

The practicals are grouped into themes covering core areas of chemistry. The main required practicals include:

1. Preparation and Identification of Salts
2. Measuring the Rate of Reaction
3. Investigating Methods to Change the Rate of Reaction
4. Calorimetry: Specific Heat Capacity of Water
5. Electrolysis of Solutions
6. Testing for Ions (Qualitative Analysis)
7. Investigating the Effect of Concentration on the Rate of Reaction

8. Investigating the Effect of Surface Area on the Rate of Reaction
9. Testing for Gases Produced in Reactions
10. Reactions of Metals with Acids
11. Chromatography of Dyes

Each practical has a specific purpose, method, and expected outcomes, which students should understand thoroughly.

1. Preparation and Identification of Salts

Purpose and Importance

This practical illustrates how to prepare common salts via neutralization reactions and how to confirm their identity through tests.

Methodology

- Select an acid and a base (e.g., hydrochloric acid and sodium hydroxide).
- Carefully add the base to the acid until neutralization occurs, indicated by a pH indicator (e.g., phenolphthalein or methyl orange).
- Filter the resulting solution to remove impurities.
- Evaporate the solution carefully to obtain salt crystals.

Key Skills and Tips

- Precise measurement of acid and base volumes.
- Use of titration to determine the exact amount needed for neutralization.
- Proper filtering techniques to obtain pure salts.
- Safety precautions: wearing eye protection and handling acids/bases with care.

Common Errors and How to Avoid Them

- Over-neutralization leading to excess base or acid—use titration to prevent this.
- Loss of product during filtration—use appropriate filtering equipment.
- Incomplete evaporation—avoid boiling dry, which can decompose salts.

2. Measuring the Rate of Reaction

Purpose

To understand how to measure the speed of a chemical reaction, typically involving the production or consumption of a substance.

Method Examples

- Reaction between Magnesium and Hydrochloric Acid:
- Record the time taken for a set amount of magnesium to react.
- Collect hydrogen gas over water or via displacement.
- Decomposition of Hydrogen Peroxide Using Catalase:
- Measure the volume of oxygen produced over time.

Data Collection and Interpretation

- Use gas collection apparatus (e.g., gas syringes or burettes).
- Record reaction times or gas volumes at regular intervals.
- Plot graphs of reaction progress to analyze rate changes.

Skills Developed

- Accurate timing and measurement.
- Graph plotting and interpretation.
- Understanding factors influencing reaction rates.

Common Pitfalls

- Loss of gases or leaks in apparatus.
- Inconsistent starting conditions.
- Not repeating experiments to ensure reliability.

3. Investigating Methods to Change the Rate of Reaction

Purpose

To explore how variables such as temperature, concentration, surface area, or catalysts affect reaction rate.

Typical Experiments

- Effect of Temperature:
 - Carry out the reaction at different temperatures using water baths.
 - Measure the time taken for a fixed amount of gas to be produced.
- Effect of Concentration:
 - Vary the concentration of reactants and measure reaction times.
- Effect of Surface Area:
 - Use powdered vs. lump materials to see how surface area influences rate.

Data Analysis and Conclusions

- Plot reaction rate versus variable.
- Recognize patterns: higher temperature or concentration generally increases rate.
- Understand the role of catalysts in lowering activation energy.

Important Considerations

- Keep all other variables constant.
- Use appropriate safety measures, especially at higher temperatures.
- Repeat trials for accuracy.

4. Calorimetry: Specific Heat Capacity of Water

Purpose

To determine the specific heat capacity of water using a simple calorimeter.

Methodology

- Measure a known mass of water.
- Add a known amount of energy (e.g., via electrical heater).
- Record temperature change.
- Calculate specific heat capacity using the formula:

$$Q = mc\Delta T$$

where:

- Q = energy supplied (J)
- m = mass of water (kg)
- c = specific heat capacity (J/kg°C)

- ΔT = temperature change ($^{\circ}\text{C}$)

Procedure Tips

- Use insulated containers to minimize heat loss.
- Measure temperature with a precise thermometer.
- Record multiple readings for accuracy.

Analysis

- Calculate the specific heat capacity.
- Compare results with the known value (approximately $4186 \text{ J/kg}^{\circ}\text{C}$ for water).

Common Errors

- Heat loss to surroundings.
- Inaccurate temperature readings.
- Incomplete transfer of energy.

5. Electrolysis of Solutions

Purpose

To understand how electrical energy can decompose compounds, and to identify products at electrodes.

Procedure

- Set up an electrolysis cell with inert electrodes (e.g., graphite or platinum).
- Use aqueous solutions such as sodium chloride or copper sulfate.
- Connect to a power supply and pass a controlled current.
- Collect gases evolved at electrodes for identification.

Key Observations

- Gas at the cathode (e.g., hydrogen in many cases).
- Gas at the anode (e.g., chlorine or oxygen).

Safety and Handling

- Always wear protective equipment.
- Be aware of the corrosive nature of some solutions.
- Ensure proper disposal of chemicals.

Applications

- Extraction of metals.
- Production of chemicals like chlorine.

6. Testing for Ions (Qualitative Analysis)

Purpose

To identify the presence of specific ions in solution based on characteristic reactions.

Common Tests

- Chloride ions (Cl^-): Add silver nitrate; a white precipitate forms.
- Sulfate ions (SO_4^{2-}): Add barium chloride; a white precipitate forms.
- Carbonate ions (CO_3^{2-}): Add dilute acid; bubbles of CO_2 are evolved.
- Iron(II) and Iron(III): Add sodium hydroxide; green or brown precipitates form.

Procedure Tips

- **Use control samples.**
- **Conduct tests systematically.**
- **Record observations meticulously.**

Limitations

- **Some ions may produce similar precipitates.**
- **Confirmatory tests may be required.**

7. Investigating the Effect of Concentration on the Rate of Reaction

Method

- Use reactions such as sodium thiosulfate and hydrochloric acid.
- Vary the concentration of one reactant while keeping others constant.
- Measure the time for a visible change (e.g., disappearance of a cross through a solution).

Analysis

- Plot concentration versus reaction time.
- Determine how increasing concentration speeds up the reaction.

Skills Gained

- Understanding collision theory.
- Data analysis and trend recognition.

8. Investigating the Effect of Surface Area on the Rate of Reaction

Method

- **Compare reactions involving lumps vs. powdered solids.**
- **Measure the time taken for a reaction to complete.**

Key Points

- **Increased surface area exposes more particles for collisions.**
- **Use consistent amounts of reactants for fair comparison.**

Outcome

- **Faster reactions with powdered solids due to greater surface exposure.**

9. Testing for Gases Produced in Reactions

Common Gases and Tests

- **Hydrogen: Test with a lit splint—pop sound indicates hydrogen.**
- **Oxygen:**

[Required Practicals Aqa Chemistry](#)

Teaching: September 2015 First Exam: June 2016 Ensure your students get to grips with the core practicals and develop the skills needed to succeed with an in-depth assessment-driven approach that builds and reinforces understanding; clear summaries of practical work with sample questions and answers help to improve exam technique in order to achieve higher grades. Written by experienced author Nora Henry, this Student Guide for practical Chemistry: - Help students easily identify what they need to know with a concise summary of required practical work examined in the A-level specifications. - Consolidate understanding of practical work, methodology, mathematical and other skills out of the laboratory with exam tips and knowledge check questions, with answers in the back of the book. - Provide plenty of opportunities for students to improve exam technique with sample answers, examiners tips and exam-style questions. - Offer support beyond the Student books with coverage of methodologies and generic practical skills not focused on in the textbooks.

required practicals aqa chemistry: AQA GCSE (9-1) Chemistry Student Book Richard Grime, Nora Henry, 2016-08-01 Exam Board: AQA Level: GCSE Subject: Chemistry First Teaching: September 2016 First Exam: June 2018 AQA approved. Expand and challenge your students' knowledge and understanding of Chemistry with this textbook that guides students through each topic, the 8 required practical activities and assessment requirements of the new 2016 AQA GCSE Chemistry specification. - Provides support for all 8 required practicals, along with extra tasks for broader learning - Tests understanding and consolidate learning with Test Yourself questions, Show you Can challenges, Chapter review questions and synoptic practice questions - Supports Foundation and Higher tier students, with Higher tier-only content clearly marked - Builds Literacy skills for the new specification with key words highlighted and practice extended answer writing and spelling/vocabulary tests FREE GCSE SCIENCE TEACHER GUIDES These will be provided for free via our website. To request your free copies please email science@hodder.co.uk

required practicals aqa chemistry: AQA GCSE Chemistry Required Practicals Exam Practice Workbook Primrose Kitten, 2019-02-04 This exam practice workbook offers targeted practice for the 8 AQA GCSE Chemistry Required Practicals. A variety of exam-style questions, expert hints on tackling the practicals questions, and tips on applying the skills to different contexts offer the best preparation for the 15% practicals requirement of GCSE Chemistry.

required practicals aqa chemistry: A-Level Chemistry for AQA: Year 1 & 2 Student Book, 2020-10-05 This fantastic CGP Student Book comprehensively covers both years of AQA A-Level Chemistry. It's bursting with in-depth, accessible notes explaining every course topic, plus all of the Required Practicals. Everything's supported by clear diagrams, photographs, tips and worked examples. Throughout the book there are lots of practice questions and exam-style questions (with answers at the back). There's detailed guidance on Maths Skills and Practical Skills, as well as indispensable advice for success in the final exams. If you'd prefer Year 1 (9781782943211) & Year 2 (9781782943266) in separate books, CGP has them too! And for more detailed coverage of the mathematical elements of A-Level Chemistry, try our Essential Maths Skills book (978182944720)!

required practicals aqa chemistry: Practice makes permanent: 350+ questions for AQA GCSE Chemistry Owen Mansfield, Sam Holyman, 2020-08-10 Practise and prepare for AQA GCSE Chemistry with hundreds of topic-based questions and one complete set of exam practice papers designed to strengthen knowledge and prepare students for the exams. This extensive practice book raises students' performance by providing 'shed loads of practice', following the 'SLOP' learning approach that's recommended by teachers. - Consolidate knowledge and understanding with practice questions for every topic and type of question, including multiple-choice, multi-step calculations and extended response questions. - Develop the mathematical, literacy and practical skills required for the exams; each question indicates in the margin which skills are being tested. - Confidently approach the exam having completed one set of exam-style practice papers that replicate the types, wording and structure of the questions students will face. - Identify topics and skills for revision, using the page references in the margin to refer back to the specification and accompanying Hodder Education Student Books for remediation. - Easily check answers with fully

worked solutions and mark schemes provided in the book.

required practicals aqa chemistry: GCSE AQA Chemistry Required Practicals Emma Clayton (Textbook editor), Paul Jordin, George Wright,

required practicals aqa chemistry: Practice makes permanent: 600+ questions for AQA A-level Chemistry Nora Henry, Alyn G. McFarland, 2020-10-05 Practise and prepare for AQA A-level Chemistry with hundreds of topic-based questions and one complete set of exam practice papers designed to strengthen knowledge and prepare students for the exams. This extensive practice book raises students' performance by providing 'shed loads of practice', following the 'SLOP' learning approach that's recommended by teachers. - Consolidate knowledge and understanding with practice questions for every topic and type of question, including multiple-choice, multi-step calculations and extended response questions. - Develop the mathematical, literacy and practical skills required for the exams; each question indicates in the margin which skills are being tested. - Confidently approach the exam having completed one set of exam-style practice papers that replicate the types, wording and structure of the questions students will face. - Identify topics and skills for revision, using the page references in the margin to refer back to the specification and accompanying Hodder Education Student Books for remediation. - Easily check answers with fully worked solutions and mark schemes provided in the book.

required practicals aqa chemistry: AQA AS/A Level Year 1 Chemistry Student Guide: Inorganic and organic chemistry 1 Alyn G. McFarland, Nora Henry, 2015-11-06 Exam Board: AQA Level: AS/A-level Subject: Chemistry First Teaching: September 2015 First Exam: June 2016 Written by experienced examiners Alyn McFarland and Nora Henry, this Student Guide for Chemistry: - Helps you identify what you need to know with a concise summary of the topics examined in the AS and A-level specifications - Consolidates understanding with tips and knowledge check questions - Provides opportunities to improve exam technique with sample answers to exam-style questions - Develops independent learning and research skills - Provides the content for generating individual revision notes

required practicals aqa chemistry: AQA A Level Chemistry Student Book 2 Alyn G. McFarland, Nora Henry, 2015-08-21 Exam Board: AQA Level: AS/A-level Subject: Chemistry First Teaching: September 2015 First Exam: June 2017 AQA Approved Help students to apply and develop their knowledge, progressing from basic concepts to more complicated Chemistry, with worked examples, practical activities and mathematical support throughout. - Provides support for all 12 required practicals with activities that introduce practical work and other experimental investigations in Chemistry - Offers detailed examples to help students get to grips with difficult concepts such as Physical Chemistry calculations - Mathematical skills are integrated throughout the book and all summarised in one chapter for easy reference - Allows you to easily measure progression with Differentiated End of Topic questions and Test Yourself Questions - Develops understanding with free online access to 'Test yourself' answers and an extended glossary.

required practicals aqa chemistry: AQA A-level Year 2 Chemistry Student Guide: Physical chemistry 2 Alyn G. McFarland, Nora Henry, 2016-04-04 Exam Board: AQA Level: A-level Subject: Chemistry First Teaching: September 2016 First Exam: June 2017 Written by experienced examiners Alyn McFarland and Nora Henry, this Student Guide for Chemistry: - Helps students identify what they need to know with a concise summary of the topics examined in the AS and A-level specifications - Consolidates understanding with tips and knowledge check questions - Provides opportunities to improve exam technique with sample answers to exam-style questions - Develops independent learning and research skills - Provides the content for generating individual revision notes

required practicals aqa chemistry: AQA A-level Year 2 Chemistry Student Guide: Inorganic and organic chemistry 2 Alyn G. McFarland, Nora Henry, 2016-11-28 Exam Board: AQA Level: A-level Subject: Chemistry First Teaching: September 2016 First Exam: June 2017 Written by experienced examiners Alyn McFarland and Nora Henry, this Student Guide for Chemistry:

-Identifies the key content you need to know with a concise summary of topics examined in the A-level specifications - Enables you to measure your understanding with exam tips and knowledge check questions, with answers at the end of the guide -Helps you to improve your exam technique with sample answers to exam-style questions -Develops your independent learning skills with content you can use for further study and research

required practicals aqa chemistry: Practical Theorising in Teacher Education Katharine Burn, Trevor Mutton, Ian Thompson, 2022-07-28 This insightful collection offers a timely contribution to the body of research on practical theorising in teacher education. Acknowledging the importance of experience and reflective practice in teaching, this book simultaneously embraces the essential need for teachers at all career stages to engage effectively and critically with evidence from research. Drawing together a range of perspectives from university-based and school-based teacher educators, this book examines the challenges and critiques advanced when practical theorising was first proposed, as well as recent tensions created by the performative culture that now pervades education. It illustrates the constant renegotiation and renewal necessary to sustain such an approach to beginners' learning, investigating a range of tools developed by teacher educators to help beginning teachers navigate these demands. Demonstrating the value of practical theorising and therefore promoting powerful professional learning for practitioners, this book is essential for teachers at all career stages, including trainee teachers and student teachers.

required practicals aqa chemistry: AQA GCSE Chemistry Lab Book Mark Levesley, Iain Brand, Ms Sue Robilliard, Dr Nigel Saunders, 2017-08-10 This Lab Book includes: all the instructions students need to perform the required practicals, consistent with AQA's best-selling resources writing frames for students to record their results and reflect on their work apparatus and techniques (AT) skills self-assessment, so that students can track their progress covering AT practical requirements a full set of answers at the back. The book covers the full range of practicals needed to cover AQA's practical requirements for both the Trilogy and Synergy courses.

required practicals aqa chemistry: New Grade 9-1 GCSE Chemistry: AQA Required Practicals 10-Minute Tests (includes Answers) CGP Books, 2020

required practicals aqa chemistry: AQA A Level Chemistry Lab Book, 2018-04-23 The AQA A level Lab Books support students in completing the A level Practical requirements. This lab book includes: All the instructions students need to perform the required practicals, consistent with AQA's requirements and CPAC skills Writing frames for students to record their results and reflect on their work Questions that allow students to consolidate learning and develop reflective skills in their practical work Apparatus and Techniques (AT) skills self-assessment, so that students can track their progress covering AT practical requirements a full set of answers at the back. This lab book is designed to help students to: Structure their A level lab work to ensure that they cover the required Practical assessment criteria Track their progress in the development of A level practical skills Create a record of all of the practical work they will have completed, in preparation for revision.

required practicals aqa chemistry: AQA GCSE Chemistry (9-1) Required Practicals Lab Book Collins Gcse, Emily Quinn, Collins GCSE Staff, 2018-03-05 Exam board: AQA Level & Subject: GCSE Chemistry First teaching: September 2016 First exam: June 2018 To support students in their completion of the required practicals on their GCSE Science (9-1) course, the Collins AQA lab book is the only resource that they need. This lab book will: * provide students with all the information they need to perform their required practicals; including the method, apparatus needed, common mistakes and safety tips * be the one place to record the outcomes of practicals, providing an easy reference for revision * challenge students with extra questions designed to improve analysis, evaluation and maths skills * prepare students for their examinations, with exam-style questions directly linked to the required practicals and apparatus use.

required practicals aqa chemistry: AQA A Level Chemistry (Year 1 and Year 2) Alyn G. McFarland, Nora Henry, Teresa Quigg, 2019-07-22 Develop and learn to apply your knowledge, progressing from basic concepts to more complicated Chemistry, with worked examples, practical

activities and mathematical support in this updated, all-in-one textbook for Years 1 and 2. Written for the AQA A-level Chemistry specification, this revised textbook will: - Provide support for all 12 required practicals with activities that introduce practical work and other experimental investigations in Chemistry. - Offer detailed examples to help you get to grips with difficult concepts such as physical chemistry calculations. - Helps to improve mathematical skills with support throughout, examples of method and a dedicated 'Maths for chemistry' chapter. - Allow you to easily measure progression with differentiated end-of-topic questions and 'Test yourself' questions. - Develop understanding with free online access to 'Test yourself' answers, 'Practice' question answers and extended glossaries*.

required practicals aqa chemistry: *AQA GCSE (9-1) Chemistry Student Lab Book* David Johnston, 2019 Exam board: AQA Level: GCSE Subject: Chemistry First teaching: September 2016 First exams: Summer 2018 Provide full coverage of the required practicals and build students' working scientifically skills with questions that enable them to apply their knowledge to new contexts. - Extend knowledge and build working scientifically skills with 'Further Application' sections that provide additional questions to allow students to practice applying their knowledge. - Help guide students through the practical, the analysis of results, and generating a reasoned conclusion with scaffolded questions. - Get.

required practicals aqa chemistry: *AQA GCSE Chemistry Lab Book, 2nd Edition* Mark Levesley, Pearson Education, Limited, 2018-09-21 Series Editor: Stella Paes Part of the 2nd edition (2018/2019) AQA GCSE (9-1) Science Lab Book series, providing separate books for each of the Single Sciences (Biology, Chemistry and Physics) and one Combined Science book. Aligned precisely with the AQA GCSE (9-1) Science specifications, the write-in Lab books cover the full range of practicals needed to cover AQA's practical requirements for both the Trilogy and Synergy courses. Each 2nd edition Lab Book guides students through the scientific process and includes: all the instructions students need to perform the Required Practical with confidence and fully grasp the scientific methodology writing frames structured around the assessment objectives to allow students to record, analyse and evaluate their results exam-style questions focused on common problem areas for students a Practical Skills checklist, so that students can track the practical skills and content they have learnt in preparation for their exam and free online technician notes. All the worksheets and methods have been reviewed and checked by CLEAPSS so you can be certain the practicals work and are safe in the classroom.
