st peter s barton upon humber: St Peter's Barton-upon-Humber, Lincolnshire Warwick Rodwell, Tony Waldron, 2007 The excavations at St Peter's church, Barton-upon-Humber, between 1978 and 1984 have yielded the largest collection of human remains in the UK, dating from the late tenth century to the mid-nineteenth. The twin aims of the project were to understand the

architectural history and setting of this complex, multi-period building (Volume 1), and to recover a substantial sample of the population for palaeopathological study (Volume 2). An extensive programme of historical and topographical research also took place in order to set the archaeological evidence firmly in context. The parish registers, which extend back to the mid-sixteenth century, were transcribed, and these provide an important demographic overview of the population. The cemetery evidence revealed that the population is entirely secular, representing a cross-section of all levels of society living in the town and its hinterland. In total, 2,750 inhumations were examined, but there were also thousands of disarticulated bones - approximately three tons in weight - which could only be given the briefest examination. Those who were buried at St Peter's were subject not only to the normal visitations of disease and trauma but suffered an outbreak of the plague in 1593, when about a fifth of the population was lost. Taking the long view over the entire period, however, it is striking how many of the marks of health and vigour, popularly supposed to have changed substantially between the middle ages and the Victorian era, have remained relatively constant. Together, the two volumes provide fascinating insights into that mainstay of settlement - the small English market town.

st peter s barton upon humber: *The Foundations of Medieval English Ecclesiastical History* Philippa M. Hoskin, Christopher Nugent Lawrence Brooke, Richard Barrie Dobson, 2005 Contributions on fundamental aspects of medieval ecclesiastical history, demonstrating the importance of primary documents. The work of historians in providing new editions of primary documents, and other aids to research, has tended to go largely unsung, yet is crucial to scholarship, as providing the very foundations on which further enquiry can be based. The essays in this volume, conversely, celebrate the achievements in this field by a whole generation of medievalists, of whom the honoree, David Smith, is one of the most distinguished. They demonstrate the importance of such editions to a proper understanding and elucidation of a number of problems in medieval ecclesiastical history, ranging from thirteenth-century forgery to diocesan administration, from the church courts to the cloisters, and from the English parish clergy to the papacy. st peter s barton upon humber: Anglo-Norman Castles Robert Liddiard, 2003 Wide-ranging studies offer an in-depth analysis of castle-building 11th - 12th centuries and place castles within their broader social and political context. The castles of the eleventh and twelfth centuries remain among the most visible symbols of the Anglo-Norman world. This collection brings together for the first time some of the most significant articles in castle studies, with contributions from experts in history, archaeology and historic buildings. Castles remain a controversial topic of academic debate and here equal weight is given to seminal articles that have defined the study of the subject while at the same time emphasising newer approaches to the fortresses of the Anglo-Norman aristocracy. The studies in this volume range from discussions of the residential and military role of the castle to architectural symbolism and royal attitudes to baronial fortification. The result is a survey that offers an in-depth analysis of castle-building during the eleventh and twelfth centuries but which also places Anglo-Norman castles within their broader social, architectural and political context. st peter s barton upon humber: Archaeologists and the Dead Howard Williams, Melanie Giles, 2016-06-24 This volume addresses the relationship between archaeologists and the dead, through the many dimensions of their relationships: in the field (through practical and legal issues); in the

lab (through their analysis and interpretation); and in their written, visual and exhibitionary practice - disseminated to a variety of academic and public audiences. Written from a variety of perspectives, its authors address the experience, effect, ethical considerations, and cultural politics of working with mortuary archaeology. Whilst some papers reflect institutional or organisational approaches, others are more personal in their view: creating exciting and frank insights into contemporary issues which have hitherto often remained 'unspoken' amongst the discipline. Reframing funerary archaeologists as 'death-workers' of a kind, the contributors reflect on their own experience to provide both guidance and inspiration to future practitioners, arguing strongly that we have a central role to play in engaging the public with themes of mortality and commemoration, through the lens of the past. Spurred by the recent debates in the UK, papers from Scandinavia, Austria, Italy, the US, and the mid-Atlantic, frame these issues within a much wider international context which highlights the importance of cultural and historical context in which this work takes place.

Sarah Semple, Howard Williams, 2007-10-10 Volume 14 of the Anglo-Saxon Studies in Archaeology and History series is dedicated to the archaeology of early medieval death, burial and commemoration. Incorporating studies focusing upon Anglo-Saxon England as well as research encompassing western Britain, Continental Europe and Scandinavia, this volume originated as the proceedings of a two-day conference held at the University of Exeter in February 2004. It comprises of an Introduction that outlines the key debates and new approaches in early medieval mortuary archaeology followed by eighteen innovative research papers offering new interpretations of the material culture, monuments and landscape context of early medieval mortuary practices. Papers contribute to a variety of ongoing debates including the study of ethnicity, religion, ideology and social memory from burial evidence. The volume also contains two cemetery reports of early Anglo-Saxon cemeteries from Cambridgeshire.

Karkov, Catherine E. Karkov, 1999 The legendary Greek figure Orpheus was said to have possessed magical powers capable of moving all living and inanimate things through the sound of his lyre and voice. Over time, the Orphic theme has come to indicate the power of music to unsettle, subvert, and ultimately bring down oppressive realities in order to liberate the soul and expand human life without limits. The liberating effect of music has been a particularly important theme in twentieth-century African American literature. The nine original essays in *Black Orpheus* examines the Orphic theme in the fiction of such African American writers as Jean Toomer, Langston Hughes, Claude McKay, James Baldwin, Nathaniel Mackey, Sherley Anne Williams, Ann Petry, Ntozake Shange, Alice Walker, Gayl Jones, and Toni Morrison. The authors discussed in this volume depict music as a mystical, shamanistic, and spiritual power that can miraculously transform the realities of the soul and of the world. Here, the musician uses his or her music as a weapon to shield and protect his or her spirituality. Written by scholars of English, music, women's studies, American studies, cultural theory, and black and Africana studies, the essays in this interdisciplinary collection ultimately explore the thematic, linguistic structural presence of music in twentieth-century African American fiction.
