the beautiful south blue is the colour: *Camille Flammarion's The Planet Mars* Camille Flammarion, 2014-10-30 Camille Flammarion (1842-1925) began his career at 16 as a human computer under the great mathematician U. J. J. Le Verrier at the Paris Observatory. He soon tired of the drudgery; he was drawn to more romantic vistas, and at 19 wrote a book on an idea that he was to make his own—the habitability of other worlds. There followed a career as France's greatest

popularizer of astronomy, with over 60 titles to his credit. An admirer granted him a chateau at Juvisy-sur-l'Orge, and he set up a first-rate observatory dedicated to the study of the planet Mars. Finally, in 1892, he published his masterpiece, *La Planete Mars et ses conditions d'habitabilite*, a comprehensive summary of three centuries' worth of literature on Mars, much of it based on his own personal research into rare memoirs and archives. As a history of that era, it has never been surpassed, and remains one of a handful of indispensable books on the red planet. Sir Patrick Moore (1923-2012) needs no introduction; his record of popularizing astronomy in Britain in the 20th century equaled Flammarion's in France in the 19th century. Moore pounded out hundreds of books as well as served as presenter of the BBC's TV program "Sky at Night" program for 55 years (a world record). Though Moore always insisted that the Moon was his chef-d'oeuvre, Mars came a close second, and in 1980 he produced a typescript of Flammarion's classic. Unfortunately, even he found the project too daunting for his publishers and passed the torch of keeping the project alive to a friend, the amateur astronomer and author William Sheehan, in 1993. Widely regarded as a leading historian of the planet Mars, Sheehan has not only meticulously compared and corrected Moore's manuscript against Flammarion's original so as to produce an authoritative text, he has added an important introduction showing the book's significance in the history of Mars studies. Here results a book that remains an invaluable resource and is also a literary tour-de-force, in which the inimitable style of Flammarion has been rendered in the equally unique style of Moore.

Of almost 1500 people in the eleven ships of the First Fleet 778 were convicts, many in poor health from long imprisonment. It is to the credit of White and his assistants that on the voyage of more than eight months there were only thirty-four deaths. Outbreaks of scurvy and dysentery and lack of accommodation for the sick were his first problems in the new colony. Within a year the incidence of sickness was greatly decreased, a hospital was built, and White, a keen amateur naturalist, found time to accompany Governor Arthur Phillip on two journeys of exploration. On joining the First Fleet White had begun to keep a journal, in which he made many notes of birds examined in the colony. In November 1788 he sent this to a London friend, Thomas Wilson; edited probably by Wilson it was published in 1790 as [here] *Journal of a Voyage to New South Wales*. Accompanying the text were sixty-five engravings illustrating the natural history and products of the colony, drawn in England from specimens sent by White, with descriptions by English specialists.
