map of somerset and devon england: *The Complete History of the Black Death* Ole Jørgen Benedictow, 2021 Completely revised and updated for this new edition, Benedictow's acclaimed

study remains the definitive account of the Black Death and its impact on history. The first edition of *The Black Death* collected and analysed the many local studies on the disease published in a variety of languages and examined a range of scholarly papers. The medical and epidemiological characteristics of the disease, its geographical origin, its spread across Asia Minor, the Middle East, North Africa and Europe, and the mortality in the countries and regions for which there are satisfactory studies, are clearly presented and thoroughly discussed. The pattern, pace and seasonality of spread revealed through close scrutiny of these studies exactly reflect current medical work and standard studies on the epidemiology of bubonic plague. Benedictow's findings made it clear that the true mortality rate was far higher than had been previously thought. In the light of those findings, the discussion in the last part of the book showing the Black Death as a turning point in history takes on a new significance. OLE J. BENEDICTOW is Professor of History at the University of Oslo.

Up until this century these histories have addressed more parochial issues, such as the life of the manor, rather than explaining the features and changes in the landscape in a factual manner. Much of what is visible today in Britain's landscape is the result of a chain of social and natural processes, and can be interpreted through fieldwork as well as from old maps and documents. Michael Aston uses a wide range of source material to study the complex and dynamic history of the countryside, illustrating his points with aerial photographs, maps, plans and charts. He shows how to understand the surviving remains as well as offering his own explanations for how our landscape has evolved.
