volga river on map: Shredding the Map Edith Clowes, 2024-09-10 Shredding the Map investigates Russian place consciousness in the decade between the start of World War I and the end of the Russian civil war. Attachment to place is a vital aspect of human identity, and connection to homeland, whether imagined or real, can be especially powerful. Drawing from a large digital database of period literature, Shredding the Map investigates the metamorphic changes in how Russians related to places-whether abstractions like country or concrete spaces of borders, fronts, and edgelands-during these years. volga river on map: Map Functions Ewa Krzywicka-Blum, 2016-11-22 This book departs from typical cartography textbooks, which tend to focus on the characteristics of the methods and means of expression. Instead, it offers an explanation of the individual perspective on the map as a specific product of civilization, one that constitutes a component of social communication. The layout highlights the essential property of cartographic notation, namely: the way of forming the map's content elements, adjusted to its purpose. This property is ensured thanks to the dimension of reference units in relation to the observation scale of the objects, and by topological consistency between the reference units system and real layout of the objects. An exploration of the characteristics of various ways of depicting a map's content elements, organized in the reference units dimension, is preceded by a general section accentuating the position of cartography among other sciences, as well as the definition and general properties of a map. The book's closing chapter includes a separate textbook overview of the applications of taxonomic methods in cartography.

volga river on map: *The Changing World Religion Map* Stanley D. Brunn, 2015-02-03 This extensive work explores the changing world of religions, faiths and practices. It discusses a broad range of issues and phenomena that are related to religion, including nature, ethics, secularization, gender and identity. Broadening the context, it studies the interrelation between religion and other fields, including education, business, economics and law. The book presents a vast array of examples to illustrate the changes that have taken place and have led to a new world map of religions. Beginning with an introduction of the concept of the "changing world religion map", the book first focuses on nature, ethics and the environment. It examines humankind's eternal search for the sacred, and discusses the emergence of "green" religion as a theme that cuts across many faiths. Next, the book turns to the theme of the pilgrimage, illustrated by many examples from all parts of the world. In its discussion of the interrelation between religion and education, it looks at the role of missionary movements. It explains the relationship between religion, business, economics and law by means of a discussion of legal and moral frameworks, and the financial and business issues of religious organizations. The next part of the book explores the many "new faces" that are part of the religious landscape and culture of the Global North (Europe, Russia, Australia and New Zealand, the U.S. and Canada) and the Global South (Latin America, Africa and Asia). It does so by looking at specific population movements, diasporas, and the impact of globalization. The volume next turns to secularization as both a phenomenon occurring in the Global religious North, and as an emerging and distinguishing feature in the metropolitan, cosmopolitan and gateway cities and regions in the Global South. The final part of the book explores the changing world of religion in regards to gender and identity issues, the political/religious nexus, and the new worlds associated with the virtual technologies and visual media.

volga river on map: Building Stalinism Cynthia A. Ruder, 2018-01-30 Today the 80-mile-long Moscow Canal is a source of leisure for Muscovites, a conduit for tourists and provides the city with more than 60% of its potable water. Yet the past looms heavy over these quotidian activities: the canal was built by Gulag inmates at the height of Stalinism and thousands died in the process. In this wide-ranging book, Cynthia Ruder argues that the construction of the canal physically manifests Stalinist ideology and that the vertical, horizontal, underwater, ideological, artistic and metaphorical spaces created by it resonate with the desire of the state to dominate all space within and outside the Soviet Union. Ruder draws on theoretical constructs from cultural geography and spatial studies to interpret and contextualise a variety of structural and cultural products dedicated to, and in praise of, this signature Stalinist construction project. Approached through an extensive range of archival sources, personal interviews and contemporary documentary materials these include a diverse body of artefacts - from waterways, structures, paintings, sculptures, literary and documentary works, and the Gulag itself. *Building Stalinism* concludes by analysing current efforts to reclaim the legacy of the canal as a memorial space that ensures that those who suffered and died building it are remembered. This is essential reading for all scholars working on the all-pervasive nature of Stalinism and its complex afterlife in Russia today.
