disneyland anaheim california map: Petrocinema Marina Dahlquist, Patrick Vonderau, 2021-01-28 Petrocinema presents a collection of essays concerning the close relationship between the oil industry and modern media-especially film. Since the early 1920s, oil extracting companies such as Standard Oil, Royal Dutch/Shell, ConocoPhillips, or Statoil have been producing and circulating moving images for various purposes including research and training, safety, process observation, or promotion. Such industrial and sponsored films include documentaries, educationals, and commercials that formed part of a larger cultural project to transform the image of oil exploitation, creating media interfaces that would allow corporations to coordinate their goals with broader cultural and societal concerns. Falling outside of the domain of conventional cinema, such films firmly belong to an emerging canon of sponsored and educational film and media that has developed over the past decade. Contributing to this burgeoning field of sponsored and educational film scholarship, chapters in this book bear on the intersecting cultural histories of oil extraction and media history by looking closely at moving image imaginaries of the oil industry, from the earliest origins or "spills" in the 20th century to today's post industrial "petromelancholia."

disneyland anaheim california map: *A History of America in 100 Maps* Susan Schulten, 2018-09-21 Throughout its history, America has been defined through maps. Whether made for military strategy or urban reform, to encourage settlement or to investigate disease, maps invest information with meaning by translating it into visual form. They capture what people knew, what they thought they knew, what they hoped for, and what they feared. As such they offer unrivaled windows onto the past. In this book Susan Schulten uses maps to explore five centuries of American history, from the voyages of European discovery to the digital age. With stunning visual clarity, *A History of America in 100 Maps* showcases the power of cartography to illuminate and complicate our understanding of the past. Gathered primarily from the British Library's incomparable archives and compiled into nine chronological chapters, these one hundred full-color maps range from the iconic to the unfamiliar. Each is discussed in terms of its specific features as well as its larger historical significance in a way that conveys a fresh perspective on the past. Some of these maps were made by established cartographers, while others were made by unknown individuals such as Cherokee tribal leaders, soldiers on the front, and the first generation of girls to be formally educated. Some were tools of statecraft and diplomacy, and others were instruments of social reform or even advertising and entertainment. But when considered together, they demonstrate the many ways that maps both reflect and influence historical change. Audacious in scope and charming in execution, this collection of one hundred full-color maps offers an imaginative and visually engaging tour of American history that will show readers a new way of navigating their own worlds.
