i want to see: What I Want You to See Catherine Linka, 2020-02-04 A college freshman is swept into shaky moral territory within the cut-throat world of visual arts in this razor-sharp novel. Winning a scholarship to California's most prestigious art school seems like a fairy tale ending to Sabine Reye's awful senior year. After losing both her mother and her home, Sabine longs for a place where she belongs. But the cutthroat world of visual arts is nothing like what Sabine had imagined. Colin Krell, the renowned faculty member whom she had hoped would mentor her, seems to take merciless delight in tearing down her best work—and warns her that she'll lose the merit-based award if she doesn't improve. Desperate and humiliated, Sabine doesn't know where to turn. Then she meets Adam, a grad student who understands better than anyone the pressures of art school. He even helps Sabine get insight on Krell by showing her the modern master's work in progress, a portrait that's sold for a million dollars sight unseen. Sabine is enthralled by the portrait; within those swirling, colorful layers of paint is the key to winning her inscrutable teacher's approval. Krell did advise her to improve her craft by copying a painting she connects with...but what would he think of Sabine secretly painting her own version of his masterpiece? And what should she do when she accidentally becomes party to a crime so well-plotted that no one knows about it but her? Complex and utterly original, *What I Want You to See* is a gripping tale of deception, attraction, and moral ambiguity.

i want to see: How Second Languages are Learned Roger Hawkins, 2018-11-22 A comprehensive introduction to how people learn second languages (L2s), this textbook approaches the topic through five problems the L2 learner has to solve: 'breaking into' the L2; associating forms with meanings; learning sentence structure; learning phrasal and sentential meaning; and learning the use of the L2 in context. These problems are linked throughout to the L2 acquisition of lexis, morphology, syntax, semantics, phonetics/phonology and language-use in a reader-friendly way, using key studies to build a comprehensive picture of how L2s are learned. 'In a nutshell' summaries of chapter sections provide helpful signposts to the developing argument, whilst end-of-chapter activities encourage the reader to reflect on the ideas presented, analyse data and think creatively about the problems encountered. The roles of innate knowledge, input, and the age at which learning starts are also considered. This essential textbook will enable students to think objectively about language, and will be an asset to any introductory course on second language acquisition.
