map of germany poland: Germany as a Culture of Remembrance Alon Confino, 2017-03-01 An acknowledged authority on German history and memory, Alon Confino presents in this volume an original critique of the relations between nationhood, memory, and history, applied to the specific case of Germany. In ten essays (three never before published and one published only in German), Confino offers a distinct view of German nationhood in particular and of nationhood in general as a product of collective negotiation and exchange between the many memories that exist in the nation. The first group of essays centers on the period from 1871 to 1990 and explores how Germans used conceptions of the local, or *Heimat*, to identify what it meant to be German in a century of ideological upheavals. The second group of essays comprehensively critiques and analyzes the ways

laypersons and scholars use the notion of memory as a tool to understand the past. Arguing that the case of Germany contains particular characteristics with broader implications for the way historians practice their trade, *Germany as a Culture of Remembrance* examines the limits and possibilities of writing history.

map of germany poland: *The Japanese Buddhist World Map* D. Max Moerman, 2021-12-31

From the fourteenth through the nineteenth centuries Japanese monks created hundreds of maps to construct and locate their place in a Buddhist world. This expansively illustrated volume is the first to explore the largely unknown archive of Japanese Buddhist world maps and analyze their production, reproduction, and reception. In examining these fascinating sources of visual and material culture, author D. Max Moerman argues for an alternative history of Japanese Buddhism—one that compels us to recognize the role of the Buddhist geographic imaginary in a culture that encompassed multiple cartographic and cosmological world views. The contents and contexts of Japanese Buddhist world maps reveal the ambivalent and shifting position of Japan in the Buddhist world, its encounter and negotiation with foreign ideas and technologies, and the possibilities for a global history of Buddhism and science. Moerman's visual and intellectual history traces the multiple trajectories of Japanese Buddhist world maps, beginning with the earliest extant Japanese map of the world: a painting by a fourteenth-century Japanese monk charting the cosmology and geography of India and Central Asia based on an account written by a seventh-century Chinese pilgrim-monk. He goes on to discuss the cartographic inclusion and marginal position of Japan, the culture of the copy and the power of replication in Japanese Buddhism, and the transcultural processes of engagement and response to new visions of the world produced by Iberian Christians, Chinese Buddhists, and the Japanese maritime trade. Later chapters explore the transformations in the media and messages of Buddhist cartography in the age of print culture and in intellectual debates during the eighteenth and nineteenth centuries over cosmology and epistemology and the polemics of Buddhist science. The Japanese Buddhist World Map offers a wholly innovative picture of Japanese Buddhism that acknowledges the possibility of multiple and heterogeneous modernities and alternative visions of Japan and the world.

The year 2016 also saw the publication of the largest empirical research study on Holocaust education outcomes – the UCL Centre for Holocaust Education's What Do Students Know and Understand About the Holocaust? This book presents a systematic reflection on the outcomes of this quarter-century of Holocaust education in England and the Centre's wider work to reflect on the forms and the limitations of children's knowledge about the Holocaust and of English Holocaust education resources. These papers are then contextualised in two ways: through papers that situate English Holocaust education historiographically and in England's wider Holocaust culture; and through papers from America, Switzerland, and Germany that place the UCL Centre for Holocaust Education's findings in a wider and comparative perspective. Overall, the book presents unique empirical insights into teaching and learning processes and outcomes in Holocaust

education and enables these to be theorised and explored systematically. The chapters in this book were originally published as a special issue of Holocaust Studies: A Journal of Culture and History.
