193 shows the cosmopolitan interconnectedness of the Roman Empire, yet scholarship has long framed the Severan dynasty in a narrative of descent stressing their North African and in particular their Syrian origins. The contributions of this volume question this conventional approach and instead examine more closely actual Severan policy in the Near East to detect potential local connections that determined this policy as well as how local communities and elites reacted to it. The volume thus explores new beginnings and old connections in the Roman Near East.

eastern roman empire map: Italy and the East Roman World in the Medieval

Mediterranean Thomas J. MacMaster, Nicholas S.M. Matheou, 2021-08-24 Italy and the East Roman World in the Medieval Mediterranean addresses the understudied topic of the Italian peninsula's relationship to the continuation of the Roman Empire in the East, across the early and central Middle Ages. The East Roman world, commonly known by the ahistorical term Byzantium, is generally imagined as an Eastern Mediterranean empire, with Italy part of the medieval West. Across 18 individually authored chapters, an introduction and conclusion, this volume makes a different case: for an East Roman world of which Italy forms a crucial part, and an Italian peninsula which is inextricably connected to—and, indeed, includes—regions ruled from Constantinople. Celebrating a scholar whose work has led this field over several decades, Thomas S. Brown, the chapters focus on the general themes of empire, cities and elites, and explore these from the angles of sources and historiography, archaeology, social, political and economic history, and more besides. With contributions from established and early career scholars, elucidating particular issues of scholarship as well as general historical developments, the volume provides both immediate contributions and opens space for a new generation of readers and scholars to a growing field.

eastern roman empire map: East Rome, Sasanian Persia and the End of Antiquity James Howard-Johnston, 2024-10-28 The last, longest and most damaging of the wars fought between East Rome and Sasanian Persia (603-628) brought the classical phase of west Eurasian history to a dramatic close. Despite its evident significance, not least as the distant setting for Muhammad's prophetic mission, this last great war of antiquity attracted comparatively little scholarly attention until the last decades of the twentieth century. James Howard-Johnston's contributions to the subject, most of which were published in out-of-the-way places (one, that on al-Tabari, is printed for the first time), are brought together in convenient form in this volume. They strive to root history in close observation of landscape and monuments as well as careful analysis of texts. They explore the evolving balance of power between the two empires, look at events through Roman, Armenian and Arab eyes, and home in on the climax of the final conflict in the 620s.

eastern roman empire map: *Globalization and Orthodox Christianity* Victor Roudometof, 2013-10-15 With approximately 200 to 300 million adherents worldwide, Orthodox Christianity is among the largest branches of Christianity, yet it remains relatively understudied. This book examines the rich and complex entanglements between Orthodox Christianity and globalization, offering a substantive contribution to the relationship between religion and globalization, as well as the relationship between Orthodox Christianity and the sociology of religion – and more broadly, the interdisciplinary field of Religious Studies. While deeply engaged with history, this book does not simply narrate the history of Orthodox Christianity as a world religion, nor does it address theological issues or cover all the individual trajectories of each subgroup or subdivision of the faith. Orthodox Christianity is the object of the analysis, but author Victor Roudometof speaks to a broader audience interested in culture, religion, and globalization. Roudometof argues in favor of using globalization instead of modernization as the main theoretical vehicle for analyzing religion, displacing secularization in order to argue for multiple hybridizations of religion as a suitable strategy for analyzing religious phenomena. It offers Orthodox Christianity as a test case that illustrates the presence of historically specific but theoretically distinct glocalizations, applicable to all faiths.

Students, teachers, researchers and interested general readers will find the book an invaluable guide. The author explores his field through numerous fascinating case studies, including a magical plot against a medieval pope, a fourteenth-century insurrection, and the importance of a kiss exchanged between two tenth-century noblemen. Throughout the book, readers are shown not only what medieval history is, but the cultural and political contexts in which medieval history has been written. And, above all, *What is Medieval History?* demonstrates why the pursuit of medieval history continues to be important to the present and future world.

eastern roman empire map: *Dynamics of Identity in the World of the Early Christians* Philip A. Harland, 2009-11-19 This study sheds new light on identity formation and maintenance in the world of the early Christians by drawing on neglected archaeological and epigraphic evidence concerning associations and immigrant groups and by incorporating insights from the social sciences. The study's unique contribution relates, in part, to its interdisciplinary character, standing at the intersection of Christian Origins, Jewish Studies, Classical Studies, and the Social Sciences. It also breaks new ground in its thoroughly comparative framework, giving the Greek and Roman evidence its due, not as mere background but as an integral factor in understanding dynamics of identity among early Christians. This makes the work particularly well suited as a text for courses that aim to understand early Christian groups and literature, including the New Testament, in relation to their Greek, Roman, and Judean contexts. Inscriptions pertaining to associations provide a new angle of vision on the ways in which members in Christian congregations and Jewish synagogues experienced belonging and expressed their identities within the Greco-Roman world. The many other groups of immigrants throughout the cities of the empire provide a particularly appropriate framework for understanding both synagogues of Judeans and groups of Jesus-followers as minority cultural groups in these same contexts. Moreover, there were both shared means of expressing identity (including fictive familial metaphors) and peculiarities in the case of both Jews and Christians as minority cultural groups, who (like other foreigners) were sometimes characterized as dangerous, alien anti-associations. By paying close attention to dynamics of identity and belonging within associations

and cultural minority groups, we can gain new insights into Pauline, Johannine, and other early Christian communities.
