map of caernarfon wales: The Enclosure Maps of England and Wales 1595-1918 Roger J. P. Kain, John Chapman, Richard R. Oliver, 2004-07 This book offers the first comprehensive study of the enclosure mapping of England and Wales. Enclosure maps are fundamental sources of evidence in many types of historical inquiries. Although modern historians tend to view these large-scale maps essentially as sources of data on past economies and societies, this book argues that enclosure maps had a much more active role at the time they were compiled. Seen from this perspective of their contemporary society, enclosure maps are not simply antiquarian curiosities, cultural artefacts, or useful sources for historians but instruments of land reorganisation and control which both reflected and consolidated the power of those who commissioned them. The book is accompanied by a fully searchable, descriptive and analytical web catalogue of all parliamentary and non-parliamentary enclosure maps extant in public archives and libraries and offers an essential research tool for economic, social and local historians and for geographers, lawyers and planners.

map of caernarfon wales: *The Medieval and Early Modern Garden in Britain* Patricia Skinner, Theresa Tyers, 2018-04-09 What was a garden in medieval and early modern British culture and how was it imagined? How did it change as Europe opened up to the wider world from the 16th century onwards? In a series of fresh approaches to these questions, the contributors offer chapters that identify and discuss newly-discovered pre-modern garden spaces in archaeology and archival sources, recognize a gendered language of the garden in fictional descriptions (fictional here being taken to mean any written text, regardless of its purpose), and offer new analysis of the uses to which gardens - real and imagined - might be put. Chapters investigate the definitions, forms and functions of physical gardens; explore how the material space of the garden was gendered as a secluded space for women, and as a place of recreation; examine the centrality of garden imagery in medieval Christian culture; and trace the development of garden motifs in the literary and artistic imagination to convey the sense of enclosure, transformation and release. The book uniquely underlines the current environmental turn in the humanities, and increasingly recognizes the value of exploring human interaction with the landscapes of the past as a route to health and well-being in the present.
