Understanding the Official DVSA Theory Test

What is the DVSA Theory Test?

The Driver and Vehicle Standards Agency (DVSA) administers the theory test in Great Britain. It is a mandatory step for learner drivers before they can take their practical driving test. The purpose of the test is to evaluate your understanding of road signs, traffic laws, and safe driving practices.

The **official DVSA theory test** comprises two main parts:

- Multiple-choice questions
- Hazard perception test

Passing both sections is essential to move forward to the practical driving exam.

Format of the Test

- Multiple-choice questions: Typically 50 questions covering various topics such as road signs, legal requirements, and driving safety.
- Hazard perception test: Consists of 14 video clips showing everyday driving scenarios where you must identify developing hazards as quickly as possible.

You are allocated a maximum of 57 minutes for the multiple-choice section and 20 minutes for the hazard perception part.

Scoring and Passing Criteria

official dvsa theory test: Driver Training for Automated Vehicles Siobhán E. Merriman, Katherine L. Plant, Kirsten M. A. Revell, Neville A. Stanton, 2024-04-30 Since the introduction of Automated Vehicles (AVs) on roads, there have been a number of high-profile collisions, which have highlighted significant driver challenges. These include challenges associated with drivers' trust in the automation, their knowledge and awareness of the AV's capabilities and limitations and their reduced situation awareness of the road environment and the vehicle. Solutions are needed to overcome these challenges, so that the expected benefits of AVs can be realised. *Driver Training for Automated Vehicles: A Systems Approach* identifies the training requirements for drivers of AVs and takes a systematic approach to design, develop, implement and evaluate a comprehensive training package to address these requirements. This book explores how training can overcome the driver challenges associated with AVs by improving drivers' mental models, trust in automation, decisions and behaviour when activating a Level 4 AV. It presents a systematic approach to the training lifecycle, by first presenting the current state of research into AVs, identifying the challenges and training requirements for drivers of AVs, and then developing and evaluating a training programme to achieve these requirements. This fascinating title highlights the need for drivers to undergo training for AVs, and takes us a step closer to this need. It walks readers through a systematic, four-step process and provides practical guidance to develop and evaluate an effective training programme. The reader will develop a thorough understanding of the current driver challenges with AVs and the methods and systems to mitigate them through current knowledge and research. This book is an ideal read for practitioners, designers and academics with a professional or research interest in AVs. Its appeal extends to those in the fields of automotive design, Systems Engineering, Human Factors and education and training.
