Using grounded research, it will include work undertaken on a schools National Theatre production of Macbeth, as well as classroom-based, action research, using a variety of digital performances of Shakespeare plays. Both find means of extending student knowledge in unexpected ways through encountering

interpretations of Shakespeare that the students had not considered. In reflecting on the practice of watching Shakespeare in an educational context- both at the theatre and in the classroom- this Element hopes to offer suggestions for how teachers might re-think the ways in which they present Shakespeare performed to their students particularly as a powerful way of building personal and critical responses to the plays.

pearson edexcel level 3: Equality and Differentiation in Marketised Higher Education Marion Bowl, Colin McCaig, Jonathan Hughes, 2018-05-24 This edited collection demonstrates how discourses and practices associated with marketisation, differentiation and equality are manifested in UK higher education today. Uniting leading scholars in higher education and equality in England, the contributors and editors expose the contradictions arising from the tension between aims for increased equality and an increasingly marketised higher education. As the authors seek to reveal both the intended and unintended consequences of the intensified marketisation of the sector, they critically examine the implications of these changes. In doing so, they reveal the ways in which institutional policy and discourse are involved in masking the contradictions between an educational marketplace and education as a vehicle for advancing equality and social justice. This pioneering volume will be of interest and value to students and scholars of higher education in England, education policy and the marketisation of higher education, as well as policy makers and practitioners.

pearson edexcel level 3: The Place of Ethics in Science Education Amanda McCrory, Michael J.

Reiss, 2023-08-24 Science education, particularly school science education, has long had an uneasy relationship with ethics, being unsure whether to embrace ethics or leave it to others. In this book, the authors argue that while the methods of science and of ethics are very different, ethics plays a key role in how science is undertaken and used. And so, ethics has a central place in science education, whether we are talking of school science education, for students of all ages, or the informal science education that takes place in through internet, books, magazines, TV and radio, or in places such as hospitals and zoos. Written for science educators based in schools and elsewhere, the authors make no assumptions that the reader has any knowledge of ethics beyond the background understandings of morality that virtually all of us have. Empowered with the knowledge shared in this book, readers will feel confident about the place that ethics has in science education. The authors provide a rich array of examples as to how science education, both in school and out of school, and for all ages, can be enhanced through including teaching about ethics.

pearson edexcel level 3: Creative Teaching for Creative Learning in Higher Music Education
Elizabeth Haddon, Pamela Burnard, 2016-05-20 This edited volume explores how selected researchers, students and academics name and frame creative teaching and learning as constructed through the rationalities, practices, relationships, events, objects and systems that are brought to educational sites and developed by learning communities. The concept of creative learning questions the starting-points and opens up the outcomes of curriculum, and this frames creative teaching not only as a process of learning but as an agent of change. Within the book, the various creativities that are valued by different stakeholders teaching and studying in the higher music sector are delineated, and processes and understandings of creative teaching are articulated, both generally in higher music education and specifically through their application within the design of individual modules. This focus makes the text relevant to scholars, researchers and practitioners across many fields of music, including those working in musicology, composition, performance, music education, and music psychology. The book contributes new perspectives on our understanding of the role of creative teaching and learning and processes in creative teaching across the domain of music learning in higher music education sectors.
