Science Digest, Science News, Scientific America, and Discover may have all been selling well to armchair scientists, but Omni masterfully blended cutting edge science news and science fiction, flashy graphic design, a touch of sex, and the images of a generation of artists completely free and unburdened by the disciplines of the masters. Created by the legendary Bob Guccione, better known for founding Penthouse than perhaps any of the other facets of his inspired career in business, art, and literature, Guccione handpicked the artists and illustrators that contributed to the Omni legacy—they in turn created works ignited by passion and intellect, two of Guccione's principal ideals. science fiction and fact magazine: *Bigfoot Stalks the Coast of Maine* Thomas A. Easton, 2000-10-01

science fiction and fact magazine: Off the Main Sequence Tom Easton, 2006-10-01 Tom Easton has served as the monthly book review columnist for Analog Science Fiction for almost three decades, having contributed during that span many hundreds of columns and over a million words of penetrating criticism on the best literature that science fiction has to offer. His reviews have been

celebrated for their wit, humor, readability, knowledge, and incisiveness. His love of literature, particularly fantastic literature, is everywhere evident in his essays. Easton has ever been willing to cover small presses, obscure authors, and unusual publications, being the only major critic in the field to do so on a regular basis. He seems to delight in finding the rare gem among the backwaters of the publishing field. A reviewer's job, he says, is not to judge books for the ages, but to tell readers enough about a book to give them some idea of whether they would enjoy it. And this he does admirably, whether he's discussing the works of the great writers in the field, or touching upon the least amongst them. This companion volume to *Periodic Stars* (Borgo/Wildside) collects another 250 of Easton's best reviews from the last fifteen years of *The Reference Library*. No one does it better, and no other guide provides such lengthy or discerning commentary on the best SF works of recent times. Complete with Introduction and detailed Index.

science fiction and fact magazine: *Lost Carcosa*, Winter 2018, Vol. 1, No. 1 Shawn M. Tomlinson, 2018-11-10 No one starts a magazine more than two decades into the 21st century. No one! It's only an addled brain that would even toy with the idea. Print publications are on their way out. The few survivors are frightened, huddled, waiting silently for the long night to come. Well, not here at Phenomenal Stories! We never expected to have any readers, so how could we be disappointed? And we're not! OK, OK, there may be one or two readers who, ironically, are reading Phenomenal Stories on their Kindles. Other than that, though, it's safe to say that after the first four issues we are very nearly 100%% reader-free! So why are we doing this? I put it to you as a question: Why wouldn't we be doing this? OK, plenty of reasons, but we're doing it anyway. Come on along!

science fiction and fact magazine: *Lemuria* Justin McHenry, 2024-01-09 Is Lemuria a real place or the fever dream of crackpots, mystics, conspiracy theorists, and Bigfoot hunters? Below the waters where the Pacific and Indian Oceans lies a lost continent. One of hopes and dreams that housed a race of beings that arrived from foreign planets and from which sprang humanity, religion, civilization, and our modern world. It was called Lemuria and it was all fake. What began as a theoretical land bridge to explain the mystery of lemurs on Madagascar quickly got hijacked to become the evolutionary home of humankind, the cradle of spirituality, and then the source of cosmological wonders. Abandoned by science as hokum, Lemuria morphed into a land filled with ancient, advanced civilizations, hollowed-out mountains full of gold and crystals, moon-beings descending in baskets, underground evil creatures, and a breast-feeding Bigfoot. The history of Lemuria is populated with a dizzying array of people from early Darwinists to conspiracy spouting Congressmen, globetrotting madams, Rosicrucians, Hollow-Earthers, sci-fi writers, UFO contactees, sleeping prophets, New Age channelers, a "Mother God", and a tequila swigging conspiracy theorist. Historian Justin McHenry provides a thoughtful exploration of how pseudo-science hijacked the gentle Victorian-era concept of Lemuria and, in following decades, twisted it into an all-encompassing home for alternative ideas about race, spirituality, science, politics, and the paranormal.

Starmen and their intraspace ships link a thousand races on ten thousand worlds, so you'd think a starman would be treated with a little respect, but some things will never change. Ray -- Captain Ray Harris, master starpilot, loves to travel but hates to land anywhere.
