alien abductions, miraculous relics, and haunted castles have attracted believers and skeptics across the globe for centuries. Paranormal investigator Joe Nickell tackles the world's most seemingly inexplicable myths in *Adventures in Paranormal Investigation*. With four decades of experience in the field, Nickell employs skepticism and scientific analysis to pull truth from the mires of false evidence and trickery that surround both old and new legends and mysteries. Unlike authors who engage in hype and sensationalism in order to foster or debunk myths, Nickell approaches each case with a rational and scientific approach intended to find the truth. Occam's Razor—all things being equal, the simplest solution is the best one—is a principal instrument in his investigative toolbox, as well as the belief that it is the claimant's responsibility to provide the extraordinary proof required in such extraordinary cases. *Adventures in Paranormal Investigation* features Nickell's on-site explorations in unusual phenomena. Among the forty unique cases, Nickell examines mysteries ranging from snake charmers who purport to hold influence over the reptiles, to the Holocaust victims who reportedly haunt a gas chamber in Dachau, to Lake Simcoe's resident lake monster Igopogo in Canada. In addition to the case studies, Nickell analyzes how the propensity to fantasize can affect human perceptions of and belief in paranormal activity and how his personal experience with the paranormal was altered when intuition led to the discovery of a daughter he didn't know existed. More than just another myth-busting text, *Adventures in Paranormal Investigation* brings together reason and scientific analyses to explain both the phenomena and the role of human perception therein, establishing Nickell as the foremost paranormal investigator of our time.

the star of india: The Stars of Ballymenone, New Edition Henry Glassie, 2016-09-12 In the time of the Troubles, when bombs blew through the night and soldiers prowled down the roads, Henry Glassie came to the Irish borderland to learn how country people endure through history. He settled into the farming community of Ballymenone, beside Lough Erne in the County Fermanagh, and listened to the old people. For a decade he heard and recorded the stories and songs in which they outlined their culture, recounted their history, and pictured their world. In their view, their world was one of love, defeat, and uncertainty, demanding the virtues of endurance: faith, bravery, and wit. Glassie's task in this book is to set the scene, to sketch the backdrop and clear the stage, so that Hugh Nolan and Michael Boyle, Peter Flanagan, Ellen Cutler, and their neighbors can tell their own tale, which explains their conditions and converts them into a tragedy of conflict and a comedy of the absurd. It gathers the saints and warriors, and celebrates the stars whose wit enabled endurance in days of violence and deprivation. With patience and respect, Glassie describes life in a time and a place exactly like no other, and yet Ballymenone is like a thousand other places where people work on the land during the day and tell their own tales at night, forgotten, while the men of power fill the newspapers and history books by sending poor boys out to be killed. The Stars of Ballymenone is an integrated analysis of the complete repertory of verbal art from a rural community where storytelling and singing of quality remained a part of daily life.

the star of india: Monsters, Mushroom Clouds, and the Cold War M. Keith Booker, 2001-05-30 The 1950s are widely regarded as the golden age of American science fiction. This book surveys a wide range of major science fiction novels and films from the long 1950s--the period from 1946 to 1964--when the tensions of the Cold War were at their peak. The American science fiction novels and films of this period clearly reflect Cold War anxieties and tensions through their focus on such themes as alien invasion and nuclear holocaust. In this sense, they resemble the observations of social and cultural critics during the same period. Meanwhile, American science fiction of the long 1950s also engages its historical and political contexts through an interrogation of phenomena, such as alienation and routinization, that can be seen as consequences of the development of American capitalism during this period. This economic trend is part of the rise of the global phenomenon that Marxist theorists have called late capitalism. Thus, American science fiction during this period reflects the rise of late capitalism and participates in the beginnings of postmodernism, described by Frederic Jameson as the cultural logic of late capitalism.
