a direct hit 5 3: *Symmetry 2* I. Hargittai, 2016-02-25 Symmetry 2 aims to present an overview of the contemporary status of symmetry studies, particularly in the arts and sciences, emphasizing both its role and importance. Symmetry is not only one of the fundamental concepts in science, but is also possibly the best unifying concept between various branches of science, the arts and other human activities. Whereas symmetry has been considered important for centuries primarily for its aesthetic appeal, this century has witnessed a dramatic enhancement of its status as a cornerstone in the sciences. In addition to traditionally symmetry-oriented fields such as crystallography and spectroscopy, the concept has made headway in fields as varied as reaction chemistry, nuclear physics, and the study of the origin of the universe. The book was initiated in response to the success of the first volume, which not only received good reviews, but received the award for The Best Single Issue of a Journal by the Association of American Publishers for 1986. The second volume extends the application of symmetry to new fields, such as medical sciences and economics, as well as investigating further certain topics introduced in Symmetry. The book is extensively illustrated and with over 64 contributions from 16 countries presents an international overview of the nature and diversity of symmetry studies today.

It is designed as a companion reference to the seven-volume history of The Army Air Forces in World War 11, edited by Wesley Frank Craven and James Lea Cate. The research was a cooperative endeavor carried out in the United States Air Force historical archives by the

Research Branch of the Albert F. Simpson Historical Research Center. Such an effort has demanded certain changes in established historical methodology, as well as some arbitrary rules for presentation of the results. After International and US events, entries are arranged geographically. They begin with events at Army Air Forces Headquarters in Washington then proceed eastward around the world, using the location of the headquarters of the numbered air forces as the basis for placement. For this reason, entries concerning the Ninth Air Force while operating in the Middle East follow Twelfth Air Force. When that headquarters moves to England in October 1943, the entries are shifted to follow Eighth Air Force. The entries end with those numbered air forces which remained in the Zone of the Interior, as well as units originally activated in the ZI, then designated for later movement overseas, such as Ninth and Tenth Air Forces. The ZI entries do not include Eighth and Twentieth Air Forces, which were established in the ZI with the original intent of placing them in those geographical locations with which they became historically identified. For these two units, original actions are shown either under AAF or in their intended geographic area of location. All times and dates used are those of the area under discussion. The entry 1/2 Jun indicates that an event occurred during the night between the two given dates, while 1-2 Jun indicates an action over a period of time. In dealing with people, again arbitrary decisions were implemented. For military men below the general officer or equivalent level, full grade and name were used. For general officers and those of equal grade in other US and foreign services, the complete rank (both that at the time first mentioned and the highest rank held prior to the end of the war) and name will be found in the index. Only an abbreviated rank (e.g., Gen or Adm) and last name are used in the text. The exception is where two general officers had the same last name; in such cases, the first name is also included. Similarly for civilian leaders, only the last name is used; full name and title are given in the index. Location of all towns, islands, etc., is also made in the index. In all cases, attempts were made to cite place names in use by the native population at the time of or immediately before the war. No names imposed by a conqueror are used. For example Pylos Bay, not Navarino Bay, is used. Further, as appropriate, native geographic terms are used: Shima for island in Japanese island groups, See for lake in Germany. However, two exceptions were made. In cases in which the place became infamous because of the actions of the conquering power, that name is preferred—for example Auschwitz would be used rather than the Polish name of Oswiecim. Also, in larger international cities, such as Roma, Koln and Wien, the anglicized name is used. Where a village or hamlet was difficult to locate or where there were several such places with the same name in a general area, the coordinates are given in the index. In some cases, with no extant navigational aids of the attacking force, the best possible guess was made based upon all available evidence. In other instances, such as the bridge at Hay-ti-attacked so often by Tenth Air Force-- a logical guess could not be made. In these cases, a question mark is placed in brackets after the index entry. Accent marks, such as umlauts, were omitted.

a direct hit 5 3: *A War Transformed* Frederick Silburn-Slater, 2023-09-28 The Great War meets the horrors of forgotten folklore in this occult skirmish wargame. 1916: A World Transformed. As the Great War raged, the Moon fell from its orbit. Seas shifted, uncovering new lands and revealing what tide and time had concealed. Long known as a potent occult power, the Moon's descent also heralded the terrifying resurgence of magic. Long-forgotten gods and spirits began to stir in hidden groves and caverns and old traditions found new strength. Soon, stone circles echoed once more with the chanting of ancient rituals and menhirs were again bedecked with wildflowers and presented with offerings of honey and blood. 1918: A War Transformed. Rival nations battle on new fronts, seeking dominance with weapons of spell, song, and sacrifice. Thrust to the surface, Doggerland, the ancient bridge between Britain and Europe, becomes a crucial battleground in the conflict. In this alien landscape, raiding parties pick through the ribs of wrecks and the ruins of lost villages, war machines festooned with totems and fetishes roll over the brittle bones of long-dead giants, and cavalry charge across plains made verdant by the vegetation returning to this new land with unnatural speed. A War Transformed is a skirmish wargame set in a world where World War I was utterly changed by forces far beyond human comprehension. Players command small forces of infantry, cavalry, artillery, and other... stranger... troops on the Doggerland Front. Fast-paced gameplay and a tense initiative bidding system are combined with authentic folk traditions and occult philosophies of the era - it is a game of rifle and relic, of bayonet and belief, of machine gun and magic.

a direct hit 5 3: Polynomials and the mod 2 Steenrod Algebra Grant Walker (Mathematician), Reginald M. W. Wood, 2018 This is the first book to link the mod 2 Steenrod algebra, a classical object of study in algebraic topology, with modular representations of matrix groups over the field F of two elements. The link is provided through a detailed study of Peterson's 'hit problem' concerning the action of the Steenrod algebra on polynomials, which remains unsolved except in special cases. The topics range from decompositions of integers as sums of 'powers of 2 minus 1', to Hopf algebras and the Steinberg representation of $GL(n, F)$. Volume 1 develops the structure of the Steenrod algebra from an algebraic viewpoint and can be used as a graduate-level textbook. Volume 2 broadens the discussion to include modular representations of matrix groups.

a direct hit 5 3: Probability and Queueing Theory S. Palaniammal, 2011-06-30 Designed as a textbook for the B.E./B.Tech. students of Computer Science and Engineering and Information Technology, this book provides the fundamental concepts and applications of probability and queueing theory. Beginning with a discussion on probability theory, the text analyses in detail the random variables, standard distributions, Markovian and non-Markovian queueing models with finite and infinite capacity, and queue networks. The topics are dealt with in a well-organized sequence with proper explanations along with simple mathematical formulations. KEY FEATURES: Gives concise and clear presentation of the concepts. Provides a large number of illustrative examples, in particular for queueing models and queueing networks, with step-by-step solutions to help students comprehend the concepts with ease. Includes questions asked in university examinations with their solutions for the last several years to help students in preparing for examinations. Provides hints and answers to unsolved problems. Incorporates chapter-end exercises to drill the students in self-study.

a direct hit 5 3: Dunkirk Hans-Adolf Jacobsen, 2019-03-19 A history of the battle from Germany's perspective: "An interesting account of a campaign that was decisive, but not as decisive as it could have been." —Miniature Wargames The German Army invaded France on May 10, 1940, and in just over ten days their rapid advance, led by three panzer corps, had left three French field armies, Belgian forces, and the British Expeditionary Force with their backs to the sea, trapped along the northern coast of France. General Gort realized that evacuation was the only option, and so began a chaotic withdrawal toward the port of Dunkirk. While the Luftwaffe continued to attack pockets of Allied forces, the German ground forces were ordered to halt their advance on May 22.

These orders were changed four days later—but these crucial four days of inaction allowed the Allies time to retreat into Dunkirk and prepare a defensive perimeter. The fighting during the last days of May was desperate, with the remnants of the French First Army surrounded at Lille, holding off seven German divisions until finally forced to surrender, and the Belgian Army forced to capitulate to the east of Dunkirk. Though the cost was devastatingly high, Dunkirk was held long enough for over 300,000 Allied troops to be evacuated back to England, with the remainder of the rearguard of French troops surrendering on June 4. The British narrative of the retreat and evacuation that prompted what was perhaps Winston Churchill's most famous wartime speech has long been well-known. Only now is Hans-Adolf Jacobsen's detailed account of the battle from the German perspective available in English.
