andy warhol the tate: Wally Olins on Brand Wally Olins, 2004-04-17 Wise, witty, readable, and very, very useful. A tour de force from the world's leading authority on branding. —Anthony Hopwood, Said Business School, Oxford Brands are a cultural phenomenon of our time. Yet, whether praised or derided, they have suffered from a critical debate characterized by routine thinking, glib assumptions, or mere prejudice. Wally Olins draws on a lifetime of marketing experience to explain why it is time to throw the old mission statements away, what happens when a brand goes global, when we shouldn't automatically assume that the customer comes first, and how it might be good

news that branding is set to spread even further. Above all, Olins provides a positive rejoinder to the new orthodoxies of the No Logo critics of branding by showing how they confuse their views about brands with their views about capitalism. As he argues, brands are no longer just about corporations, products, and services. In fact, all the significant institutions in our lives—the towns, cities, regions, or countries in which we live, our sports teams and museums, our consumer groups and charities—are given strength, identity, a defining role, and a satisfying cohesion via branding, one of the most significant social—as well as business—developments of modern times. Always wise, questioning, and iconoclastic, Wally Olins takes us to the literal heart of the matter: our crucial neglect of the way in which consumer decisions about brands are as emotional as all the other important decisions in our lives. For everyone in marketing, advertising, design, and business, and for anyone who wants to understand how the world works in the early twenty-first century, this is one of those rare books that breaks the mold.

Did you know that Alexander the Great was a sloppy drunk, William Shakespeare was a stoner, and George Washington drank a spoonful of opium every night to staunch the pain from his fake teeth? Or how about the fact that China's first emperor, Qin Shi Huangdi, ingested liquid mercury in an (ironic) attempt to live forever, or that Alexander Shulgin, inventor of no less than 230 new psychedelic drugs, was an employee of the DEA? In *Human History on Drugs*, historian Sam Kelly introduces us to the history we weren't taught in school, offering up irreverent and hysterical commentary as he sheds light on some truly shocking aspects of the historical characters we only thought we knew. With chapters spanning from Ancient Greece (The Oracle of Delphi Was Huffing Fumes) and the Victorian Era (Vincent van Gogh Ate Yellow Paint) to Hollywood's Golden Age (Judy Garland Was Drugged by Grown-Ups) and modern times (Carl Sagan Got Astronomically High), Kelly's research spans all manner of eras, places, and, of course, drugs. History is rife with drug use and drug users, and *Human History on Drugs* takes us through those highs (pun intended) and lows on a wittily entertaining ride that uncovers their seriously unexpected impact on our past.

andy warhol the tate: From Flanders Fields to the Moviegoer Michael A. Milton, 2019-10-24 How do educators, clergy, attorneys, and the concerned public come to terms with meaningful, workable ethics in an age that eschews any attempt to define truth and error? Michael A. Milton has addressed that question in the new monograph, *From Flanders Field to the Moviegoer: Philosophical Foundations for a Transcendent Ethical Framework*. Milton draws on English literature, sociology, history, public policy, and theology to mark milestones in the cultural journey from the philosophical crisis after World War I, the end of modernity and the introduction of the “theater of the absurd” in post-modernity. Rather than merely a survey, this monograph proposes a “way forward” in teaching metaphysical ethics. Originally given as a paper before American and British defense leaders in Washington, DC, Milton's original paper is now expanded for use in undergraduate, graduate, and postgraduate classrooms, as well as libraries and professional military education.

andy warhol the tate: The Life & the Work Charles G. Salas, 2007 It is often assumed that reading about the lives of artists enhances our understanding of their work--and that their work reveals something about them--but the relationship between biography and art is rarely straightforward. In *The Life and the Work*, art historians Thomas Crow, Charles Harrison, Rosalind Krauss, Debora Silverman, Paul Smith, and Robert Williams address this fundamental if convoluted relationship. Looking to such figures as Andy Warhol, Bob Dylan, Vincent van Gogh, Paul Cézanne, Leonardo da Vinci, and the artists associated with the name Art & Language, the volume's authors have written a set of provocative essays that explore how an artist's life and art are intertwined.

andy warhol the tate: Liberal Education: Analog Dreams in a Digital Age Karim Dharamsi, David Clemis, 2023-09-12 The essays in this collection contemplate the various intersections and barriers between artificial intelligence along with the values and practices of liberal education. For the proponents of liberal education as a core component of undergraduate education, the study of literature, history, philosophy, and the social sciences, like their objects and their forms of practice, are perceived to be about what is essentially human. In spheres previously thought to be exclusively human domains, modern, digitally-constructed artificial intelligence has profound implications for liberal studies, how they may be practiced, and why they are important. This collection explores the implications of AI and the world it is shaping as a potential threat and augmentation of liberal education. These essays also demonstrate how liberal studies illuminate the meaning and significance of AI and how they have shaped its development and character. The contributors to this volume write from the perspectives of philosophy, classical studies, political theory, fine art, curriculum development, and computing and information science. Several essays consider how the conventional concerns and agendas of liberal education have acquired a new urgency in the digital age. They reflect upon how the deployment of artificial intelligence confronts and problematizes what it means to be human, and how liberal education is needed to preserve and ensure what makes us humans thrive. Other essays consider how AI must be understood as an extension of our humanity and how the ethos must inform the further development and deployment of new technologies of liberal education. These challenging essays pose hard questions and the unflinching exploration of matters at the cutting edge of science, culture, and how they merge together with education.
