art of the 60 s: New Art in the 60s and 70s Anne Rorimer, 2004 By the end of the 1960s a

revolution had taken place in the perception and practice of art in Europe and North America. This book, the first detailed account of developments centered around the conceptual art movement, highlights the main issues underlying visually disparate works dating from the second half of the 1960s to the end of the 1970s. These works questioned the accepted categories of painting and sculpture by embracing a wealth of alternative media and procedures. Traditional two- and three-dimensional representations were supplanted by a variety of linguistic and photographic means, as well as installations that brought into play the importance of presentation and site. Through close examination of individual works and artists, Anne Rorimer demonstrates the pervading desire to redefine the characteristics of what was once accepted as truly visual in order to dispel earlier assumptions and offer other criteria for seeing. Artists whose work is discussed in depth include Robert Rauschenberg, Gerhard Richter, Joseph Kosuth, Lawrence Weiner, Eleanor Antin, John Baldessari, Gilbert & George, Sol LeWitt, Adrian Piper, Bruce Nauman, Vito Acconci, Marcel Broodthaers, Robert Smithson, Daniel Buren, and Michael Asher. Forerunners of the period such as Jasper Johns, Robert Rauschenberg, Andy Warhol, Frank Stella, Piero Manzoni, Joseph Beuys, Allan Kaprow, and Fluxus are also included. 303 illustrations.

art of the 60 s: Electronic String Art Stephen Erfle, 2024-02-20 String art is a well-known and popular activity that uses string, a board, and nails to produce artistic images (although there are variations that use different modalities). This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds. The downside of this highly tactile activity is that it is quite time-consuming and rigid. By contrast, electronic string art offers much more flexibility to set up or change nail locations and counting rules, and the images created from those changes change instantaneously. *Electronic String Art: Rhythmic Mathematics* invites readers to use the author's digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise, accessible explanations of the underlying mathematical principles regarding how the images were created and how they change. Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry, number theory, and modular arithmetic from approximately 200 short-interdependent sections. Features Readers are able to drill-down on images in order to understand why they work using short (1 to 2 page) stand-alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand-alone in the sense that they need not be read sequentially but can be referred to based on images that the reader

finds interesting An open-ended, inherently flexible teaching resource for elementary, middle, and high school-level mathematics The most mathematically challenging sections (or portions of a section) are designated MA and may not be accessible to elementary and middle school readers Will be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics Includes exercises, solutions, and many online digital resources These QR codes take you to these digital resources. One takes you directly to the web version of the string art model (used as a starting point for teaching the parameters of the model in Section 25.5). Editors Paul Wood and Leon Wainwright have included 370 texts, some of which appear in English for the first time. The anthologized texts are presented in eight chronological parts, which are then subdivided into key themes appropriate to each historical era. The majority of the texts are representations of changing ideas about the cultures of the world by European artists and intellectuals, but increasingly, as the modern period develops, and especially as colonialism is challenged, a variety of dissenting voices begin to claim their space, and a counter narrative to western hegemony develops. Over half the book is devoted to 20th and 21st century materials, though the book's unique selling point is the way it relates the modern globalization of art to much longer cultural histories. As well as the anthologized material, Art in Theory: The West in the World contains: A general introduction discussing the scope of the collection Introductory essays to each of the eight parts, outlining the main themes in their historical contexts Individual introductions to each text, explaining how they relate to the wider theoretical and political currents of their time Intended for a wide audience, the book is essential reading for students on courses in art and art history. It will also be useful to specialists in the field of art history and readers with a general interest in the culture and politics of

the modern world.

This comprehensive Commentary on the Statute of the International Court of Justice, now in its second edition, analyses in detail not only the Statute of the Court itself but also the related provisions of the United Nations Charter as well as the relevant provisions of the Court's Rules of Procedure. Five years after the first edition was published, the second edition of the Commentary embraces current events before the International Court of Justice as well as before other courts and tribunals relevant for the interpretation and application of its Statute. The Commentary provides a comprehensive overview and analysis of all legal questions and issues the Court has had to address in the past and will have to address in the future. It illuminates the central issues of procedure and substance that the Court and counsel appearing before it face in their day-to-day work. In addition to commentary covering all of the articles of the Statute of the ICJ, plus the relevant articles of the Charter of the United Nations, the book includes three scene-setting chapters: Historical Introduction, General Principles of Procedural Law, and Discontinuation and Withdrawal. The second edition of the Commentary adds two important and instructive chapters on Counter-Claims and Evidentiary Issues. The combination of expert editors and commentators, and their assessment of new developments in the important work of the ICJ, make this a landmark publication in the field of international law.
