**man with an iron heart:** The Man with the Iron Heart Harry Turtledove, 2008-07-22 What if V-E Day didn't end World War II in Europe? What if, instead, the Allies had to face a potent, even fanatical, postwar Nazi resistance? Such a movement, based in the fabled Alpine Redoubt, was in fact a real threat, ultimately neutralized by Germany's flagging resources and squabbling officials. But had SS Obergruppenführer Reinhard Heydrich, the notorious Man with the Iron Heart, not been assassinated in 1942, fate might have taken a different turn. We might likely have seen a German guerrilla war launched against the conquerors, presaging by more than half a century the protracted conflict with an unrelenting enemy that now engulfs the United States and its allies in Iraq. How

might today's clash of troops versus terrorists have played out in 1945? In this imagined world, Nazi forces resort to unconventional warfare, using the quick and dirty tactics of terrorism—booby traps, time bombs, mortar and rocket strikes in the night, assassinations, even kamikaze-style suicide attacks—to overturn what seemed to be a decisive Allied victory. In November 1945, a truck bomb blows up the Nuremberg Palace of Justice, where high-ranking Nazi officials are about to stand trial for war crimes. None of the accused are there when the bomb goes off, but their judges, all of them present and accounted for, are annihilated. Worse acts of terrorism follow all over Europe. Suddenly the Allies—especially the United States—must battle an invisible enemy and sacrifice countless lives in a long, seemingly pointless, unwinnable conflict. On the home front, patriotism corrodes, political fortunes are made and lost in the face of an antiwar backlash, and a once-proud country wonders how the righteous fight for freedom overseas has collapsed into a hopeless quagmire. At once a novel of thrilling military suspense, intriguing alternate history, and profound insight into contemporary affairs, *The Man with the Iron Heart* is a tour de force by a storyteller of exceptional imaginative power.

**man with an iron heart: Scripting Genocide** Nicholas K. Johnson, 2025-06-30 Scripting Genocide traces the history of how and why the Wannsee Conference has repeatedly attracted the attention of American, British, and German artists, writers, and filmmakers since 1960. Almost all of their televisual depictions of the conference itself are sparse, minimalist, dialogue-driven productions. Their subtle, almost scholarly projection of the conference stands in stark contrast to the large-scale and often critically acclaimed attention devoted to other aspects of the Holocaust in both big-budget theatrical films and European art cinema. *Scripting Genocide* investigates how the dramatic, fictionalized depictions of the Wannsee Conference offered filmmakers, and especially screenwriters, opportunities to be public historians. This book also contains the final interviews with screenwriters Paul Mommertz and Loring Mandel. Following the methods of the New Film History, which is grounded in archival production material, oral history interviews, and screenplay analysis, this book asks why and how filmmakers have grappled with portraying Wannsee in dramatic form since the 1960s. Each of these docudramas contributed to a diffuse body of work the author conceptualizes as antifascist television. In the end, all of these productions argue that words prefigure deeds.

**man with an iron heart: Image and Concept** Olga Freidenberg, 2006-03-07 First published in 1997. Image and Concept: Mythopoetic Roots of Literature here - finally - available in English, is devoted to the origins of Greek tragedy. In it, Freidenberg develops the notion that it was the very transition from thinking based on mythological images to the kind of thinking that makes use of formal-logical concepts that resulted in the appearance of literature. With the transition from mythological thinking to conceptual thought, the content of mythological images became the texture of the new concepts. The inherited mythological forms now were reinterpreted conceptually: causalized, ethicized, generalized, abstracted. This reinterpretation, in turn, brought about poetic figurality. Folkloric material began to be differentiated from the mythological images of the past into various disciplines such as religion, philosophy, ethics, literature, and art. Yet, differentiated and reinterpreted as it was, the folkloric material remained formally preserved in poetic image, structure, and plot.
