books by george eliot: The Life of George Eliot (Vol. 1-3) George Eliot, 2020-07-02 George Eliot's Life, as Related in Her Letters and Journals is a specific kind of autobiography of English author Mary Ann Evans, better known as George Eliot. This book is based on her correspondence and journals, edited by her husband John Walter Cross. His goal in assembling this work was to make known the woman, as well as the author, through the presentation of her daily life and to show the development of her intellect and character. Eliot was married to Cross only for six months before she died, leaving him with the task to present her life to the public. By arranging all the letters and journals so as to form one connected whole, keeping the order of their dates, the editor and the husband managed to combine a narrative of day-to-day life of this prominent literary figure.

books by george eliot: George Eliot's Life as Related in Her Letters and Journals George Eliot, John Walter Cross, 1890 Best known for his brief marriage to George Eliot, John Walter Cross (1840-1924) compiled this three-volume 'autobiography' of 1885 from his late wife's journals and letters. Eliot was never married to her long-term partner G. H. Lewes, and she courted further scandal when she married Cross, twenty years her junior, in the spring of 1880. While these volumes offer a valuable insight into Eliot's private reflections, what is perhaps most telling is the material left out or rewritten in Cross' efforts to lend his wife's unconventional life some respectability, which he does at the expense of what one reviewer described as Eliot's 'salt and spice'. George Eliot's Life will be of particular interest to scholars of nineteenth-century biography and literature. Volume 3 focuses on Eliot's final years, including her later literary success, travels in Spain, the death of G. H. Lewes, and her marriage to Cross.

books by george eliot: Middlemarch George Eliot, 2015-12-27 Middlemarch, A Study of Provincial Life is a novel by English author George Eliot, first published in eight volumes during 1871-2. The novel is set in the fictitious Midlands town of Middlemarch during 1829-32, and it comprises several distinct (though intersecting) stories and a large cast of elaborately depicted characters. Significant themes include the status of women, the nature of marriage, idealism, self-interest, religion, hypocrisy, political reform, and education. In addition, the work incorporates contemporary medical science and examines the deeply reactionary mind-set found within a settled community facing the prospect of unwelcome change. Middlemarch it is now widely regarded as her best work and one of the greatest novels ever written in English.

P = moon's horizontal parallax = earth's angular semidiameter as seen from the moon. f = moon's angular semidiameter. Now P (in circular measure), r : $r' = r$ (in circular measure); $\therefore r : r' :: P : P'$, or (radius of earth) : (radius of moon) :: (moon's parallax) : (moon's semidiameter). Examples. 1. Taking the moon's horizontal parallax as $57'$, and its angular diameter as $32'$, find its radius in miles, assuming the earth's radius to be 4000 miles. Here moon's semidiameter = $16'$; $\therefore 4000 :: 57' : 16'$; $\therefore r = 400 \frac{16}{57} = 1123$ miles. 2. The sun's horizontal parallax being $88''$, and his angular diameter $32'$ find his diameter in miles. ' Am. $872,727$ miles. 3. The synodic period of Venus being 584 days, find the angle gained in each minute of time on the earth round the sun as centre. Am. 1.54 per minute. 4. Find the angular velocity with which Venus crosses the sun's disc, assuming the distances of Venus and the earth from the sun are as 7 to 10, as given by Bode's Law. Since (fig. 50) $S V : V A :: 7 : 3$. But S has a relative angular velocity round the sun of 1.54 per minute (see Example 3); therefore, the relative angular velocity of $A V$ round A is greater than this in the ratio of 7 : 3, which gives an approximate result of 3.6 per minute, the true rate being about 4 per minute. Annual ParaUax. 95. We have already seen that no displacement of the observer due to a change of position on the earth's surface could apparently affect the direction of a fixed star. However, as the earth in its annual motion describes an orbit of about 92 million miles radius round the sun, the different positions in space from which an observer views the fixed stars from time to time throughout the year must be separated ...
