carpathian mountains in europe map: *Eastern Europe!* Tomek E. Jankowski, 2014-05-20
Eastern Europe! is a brief and concise (but informative) introduction to Eastern Europe and its myriad customs and history. When the legendary Romulus killed his brother Remus and founded the city of Rome in 753 BCE, Plovdiv -- today the second-largest city in Bulgaria -- was already thousands of years old. Indeed, London, Paris, Berlin, Vienna, Madrid, Brussels, Amsterdam are all mere infants compared to Plovdiv. This is just one of the paradoxes that haunts and defines the New Europe, that part of Europe that was freed from Soviet bondage in 1989 which is at once both much older than the modern Atlantic-facing power centers of Western Europe while also being in some ways much younger than them. Even those knowledgeable about Western Europe often see Eastern Europe as terra incognita, with a sign on the border declaring Here be monsters. This book is a gateway to understanding both what unites and separates Eastern Europeans from their Western brethren, and how this vital region has been shaped by, but has also left its mark on, Western Europe, Central Asia, the Middle East and North Africa. Ideal for students, businesspeople, and those who simply want to know more about where Grandma or Grandpa came from, *Eastern Europe!* is a user-friendly guide to a region that is all too often mischaracterized as remote, insular, and superstitious. Illustrations throughout include: 40 photos, 40 maps and 40 figures (tables, charts, etc.) From the Trade Paperback edition.

carpathian mountains in europe map: *The Carpathians* Patrice M. Dabrowski, 2021-10-15 In *The Carpathians*, Patrice M. Dabrowski narrates how three highland ranges of the mountain system found in present-day Poland, Slovakia, and Ukraine were discovered for a broader regional public. This is a story of how the Tatras, Eastern Carpathians, and Bieszczady Mountains went from being terra incognita to becoming the popular tourist destinations they are today. It is a story of the encounter of Polish and Ukrainian lowlanders with the wild, sublime highlands and with the indigenous highlanders—Górale, Hutsuls, Boikos, and Lemkos—and how these peoples were incorporated into a national narrative as the territories were transformed into a native/national landscape. The set of microhistories in this book occur from about 1860 to 1980, a time in which nations and states concerned themselves with the frontier at the edge. Discoverers not only became enthralled with what were perceived as their own highlands but also availed themselves of the mountains as places to work out answers to the burning questions of the day. Each discovery led to a surge in mountain tourism and interest in the mountains and their indigenous highlanders. Although these mountains, essentially a continuation of the Alps, are Central and Eastern Europe's most prominent physical feature, politically they are peripheral. *The Carpathians* is the first book to deal with the northern slopes in such a way, showing how these discoveries had a direct impact on the various nation-building, state-building, and modernization projects. Dabrowski's history incorporates a unique blend of environmental history, borderlands studies, and the history of tourism and leisure.

carpathian mountains in europe map: *Europe's Living Landscapes* Bas Pedroli, Anne van Doorn, Geert de Blust, 2014-12-22 This book is the result of three symposia of the Dutch Society for

Landscape Ecology. The first symposium in 2005 was about the National Ecological Network in the Netherlands . The reason was that the implementation of the NEN, decided upon in 1990, was halfway. The second symposium, in 2006, was about urban ecology and the third one, to be held in 2007, will be about civil infrastructure. This book does not cover the conferences completely and new contributions are added. The three themes are important contexts in which landscape ecologists do their research and apply their knowledge and skills. Of course, there are many more subjects to hold conferences about, for example climate change, urbanisation, agriculture, landscape ecology itself etc. The focus of the conferences is on the Netherlands, with its urbanisation, intensive land use and water management as characteristic features. Although many WLO members do their work abroad or in an international context, these conferences offer a window on what happens in the Dutch context. The experiences may be of value for other contexts and that is why we present the results in English. The selected themes and the focus on the Dutch context are serious demarcations of what landscape ecology in the Netherlands is all about. The book does not represent all research and applications of landscape ecology.

carpathian mountains in europe map: Prehistoric Wetland Sites of Southern Europe Ariane Ballmer, Albert Hafner, Willy Tinner, 2024-11-15 This is an open access book. Unique in its scope, this book provides for the first time a Southern European perspective on prehistoric wetland settlements and their natural environment. These are dwellings originally built in humid locations, i.e. on shores and in shallow water areas of lakes, bogs, marshes, rivers, estuaries and lagoons. The relevant archaeological remains are in most cases waterlogged and offer outstanding preservation conditions for organic materials and are moreover in close proximity to uninterrupted natural archives (e.g. lake or mire sediments), which allows for a broad range of transdisciplinary research approaches. The sites discussed in this book date from the Neolithic and the Bronze Age (c. 5500-1000 BC), and are located in nine countries of Southern Europe, i.e. Spain, France, Italy, Slovenia, Croatia, North Macedonia, Albania, Greece and Bulgaria. Four dimensions of prehistoric wetland settlements are explored in the book – the archaeological, the dendroarchaeological, the palaeoecological and the bioarchaeological: Part I is dedicated to archaeology, i.e. the excavation of settlement remains, their transdisciplinary exploration as well as their interpretation; Part II deals with dendroarchaeology and its contribution to the understanding of occupation sequences and regional chronologies; and Part III concerns uninterrupted off-site palaeoecological records of past ecosystem change, including human-environment interactions, as well as bioarchaeological on-site approaches to subsistence strategies and land use practices. Prehistoric Wetland sites of Southern Europe showcases how different disciplines and areas of expertise from the humanities and the natural sciences meet on an equal footing to elaborate coherent pictures of the past. Besides a cross-section of research statuses of different archaeological sites, currently ongoing research as well as novel, hitherto unpublished case studies and findings are made accessible to the international research community. Drawing on a wide range of expert contributions from both archaeology and the natural sciences, this book targets scholars, professionals, and students from the fields of prehistoric archaeology and palaeo-sciences, and is furthermore of interest to cultural-heritage stakeholders.

carpathian mountains in europe map: East Central Europe in the Middle Ages, 1000-1500 Jean W. Sedlar, 2013-03-01 Although the Middle Ages saw brilliant achievements in the diverse nations of East Central Europe, this period has been almost totally neglected in Western historical scholarship. East Central Europe in the Middle Ages provides a much-needed overview of the history of the region from the time when the present nationalities established their state structures and adopted Christianity up to the Ottoman conquest. Jean Sedlar's excellent synthesis clarifies what was going on in Europe between the Elbe and the Ukraine during the Middle Ages, making available for the first time in a single volume information necessary to a fuller understanding of the early history of present-day Poland, the Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Albania, and the former Yugoslavia. Sedlar writes clearly and fluently, drawing upon publications in numerous languages to craft a masterful study that is accessible and valuable to the general reader and the expert alike. The book is organized thematically; within this framework Sedlar has sought to integrate nationalities and to draw comparisons. Topics covered include early migrations, state formation, monarchies, classes (nobles, landholders, peasants, herders, serfs, and slaves), towns, religion, war, governments, laws and justice, commerce and money, foreign affairs, ethnicity and nationalism, languages and literature, and education and literacy. After the Middle Ages these nations were subsumed by the Ottoman, Habsburg, Russian, and Prussian-German empires. This loss of independence means that their history prior to foreign conquest has acquired exceptional importance in today's national consciousness, and the medieval period remains a major point of reference and a source of national pride and ethnic identity. This book is a substantial and timely contribution to our knowledge of the history of East Central Europe.
