Scientific Analysis and Accuracy

The Feasibility of the Cannon Launch

Verne's depiction of a giant cannon capable of propelling a projectile to the Moon is imaginative but grounded in the scientific understanding of ballistics and physics. The novel accurately considers:

- The need for immense force and precise calculations.
- The importance of angle and velocity to reach the Moon.
- The effects of acceleration on the human body.

However, some aspects, like the projectile's survivability and atmospheric effects, are idealized or simplified.

Space Conditions and Environment

Verne correctly predicts:

- The vacuum of space and the absence of air resistance.
- The need for protection against radiation and extreme temperatures.
- The possibility of landing on the lunar surface and exploring it.

Yet, he underestimates the complexities of re-entry, life support, and long-term habitation, which are now central concerns in modern space missions.

Limitations and Scientific Gaps

While Verne's work is remarkably forward-thinking, certain elements are speculative:

- The lack of detailed propulsion systems; his cannon approach is a conceptual device rather than a practical design.
- The absence of a detailed understanding of lunar geography or environmental hazards.
- The assumption that humans could survive the high acceleration and deceleration of launch and landing.

Despite these gaps, Verne's work contributed significantly to imagining space travel and influenced future scientific endeavors.

Cultural Impact and Legacy

Inspiring Future Generations

Jules Verne's *Earth to the Moon* ignited imaginations worldwide, inspiring scientists, engineers, and authors. Its influence can be seen in:

- The development of actual rocketry and space agencies.

jules verne earth to the moon: From the Earth to the Moon and 'Round the Moon (地球の裏面) Jules Verne, 2011-03-15 *From the Earth to the Moon* (French: *De la Terre à la Lune*, 1865) is a humorous science fantasy novel by Jules Verne and is one of the earliest entries in that genre. It tells the story of the president of a post-American Civil War gun club in Baltimore, his rival, a Philadelphia maker of armor, and a Frenchman, who builds an enormous sky-facing Columbiad space gun and launch themselves in a projectile/spaceship from it to a Moon landing. The story is also notable in that Verne attempted to do some rough calculations as to the requirements for the cannon and, considering the comparative lack of any data on the subject at the time, some of his figures are surprisingly close to reality. However, his scenario turned out to be impractical for safe manned space travel since a much longer muzzle would have been required to reach escape velocity while limiting acceleration to survivable limits for the passengers. It tells the story of the Baltimore Gun Club, a post-American Civil War society of weapons enthusiasts, and their attempts to build an enormous Columbiad space gun and launch three people--the Gun Club's president, his Philadelphian armor-making rival, and a French poet--in a projectile with the goal of a Moon landing. Five years later, Verne wrote a sequel called Around the Moon. The story is also notable in that Verne attempted to do some rough calculations as to the requirements for the cannon and in that, considering the comparative lack of empirical data on the subject at the time, some of his figures are remarkably accurate. However, his scenario turned out to be impractical for safe manned space travel since a much longer barrel would have been required to reach escape velocity while limiting acceleration to survivable limits for the passengers. The character of Michel Ardan, the French member of the party in the novel, was inspired by the real-life photographer Félix Nadar. The story opens some time after the end of the American Civil War. The Baltimore Gun Club, a society dedicated to the design of weapons of all kinds (especially cannons), comes together when Impey Barbicane, its president, calls them to support his latest idea. He's done some calculations, and believes that they could construct a cannon capable of shooting a projectile to the Moon. After receiving the support of his companions, another meeting is held to decide the place from which the projectile will be fired, the dimensions and materials of both the cannon and the projectile, and which kind of powder they are to use. An old enemy of Barbicane, a Captain Nicholl of Philadelphia, designer of plate armor, declares that the entire enterprise is absurd and makes a series of bets with Barbicane, each of them of increasing amount, over the impossibility of such feat. The first obstacle, the money to construct the giant cannon (and against which Nicholl has bet 1,000 dollars), is raised from a number of countries in America and Europe. Notably, the U.S. gives four million dollars, while England does not give a farthing, but in the end, nearly five and a half million dollars are

raised, which ensures the financial feasibility of the project. Stone's Hill in Tampa Town, Florida is chosen as the site for the cannon's construction. The Gun Club travels there and starts the construction of the Columbiad cannon, which requires the excavation of a 900-foot-deep (270 m) and 60-foot-wide (18 m) circular hole, which is made in the nick of time, but a surprise awaits Barbicane: Michel Ardan, a French adventurer, plans to travel aboard the projectile. During a meeting between Ardan, the Gun Club, and the inhabitants of Florida, Nicholl appears and challenges Barbicane to a duel. The duel is stopped when Ardan--having been warned by J. T. Maston, secretary of the Gun Club--meets the rivals in the forest where they have agreed to duel. Meanwhile, Barbicane finds the solution to the problem of surviving the incredible acceleration that the explosion would cause. Ardan suggests that Barbicane and Nicholl travel with him in the projectile, and the proposition is accepted. In the end, the projectile is successfully launched, but the destinies of the three astronauts are left inconclusive.
