map of sandwich kent uk: *The Watermills and Landscape of the River Great Ouse, Cambridgeshire* Bridget Flanagan, Keith Grimwade, 2025-08-15 Uncovers the historical significance of water milling along the River Great Ouse using innovative methods, revealing its national prominence and lasting landscape impact. The River Great Ouse in Cambridgeshire has a long history of watermilling, stretching back to at least the 10th century and possibly to the Roman period. The authors use remote sensing (LiDAR), cartographic analysis, fieldwork, documents (especially contemporary litigation) and literary sources to reveal new findings about this fascinating landscape. The Great Ouse's watermills were recorded as the most valuable in England in the Domesday Survey. All their sites are located, several having been long lost, and a comprehensive explanation for their national pre-eminence is given. The expansion of activity in the Middle Ages is investigated through a detailed study of the disputes arising from the competing uses of the river and its floodplain for watermilling, navigation and farming. Channel features that, hitherto, have either been ignored or attributed to natural processes are shown to be the result of milling activity. The continuing impact of watermilling on the landscape until its decline in the second half of the 19th century is analysed. The authors' findings have broader implications for the understanding of the development of watermilling in lowland river landscapes; the evolution of parish boundaries; and

the development of multi-channel river forms. They conclude by advocating a mapping methodology that designates landscape features resulting from watermilling as heritage assets, to guide planning decisions.
