map of the carpathian mountains: *Maps of the Ancient Sea Kings* Charles H. Hapgood, 1966 Hapgood utilizes ancient maps as concrete evidence of an advanced worldwide civilization existing many thousands of years before ancient Egypt. Hapgood concluded that these ancient mapmakers were in some ways much more advanced in mapmaking than any people prior to the 18th century. Hapgood believes that they mapped all the continents. This would mean that the Americas were mapped thousands of years before Columbus. Antarctica would have been mapped when its coasts were free of ice. Hapgood supposes that there is evidence that these people must have lived when the Ice Age had not yet ended in the Northern Hemisphere and when Alaska was still connected with Siberia by the Pleistocene, Ice Age 'land bridge'.

map of the carpathian mountains: The Origin of Mountains Cliff Ollier, Colin Pain, 2004-08-02 The Origins of Mountains approaches mountains from facts about mountain landscapes rather than theory. The book illustrates that almost everywhere, mountains arose by vertical uplift of a former plain, and by a mixture of cracking and warping by earth movements, and erosion by rivers and glaciers, the present mountainous landscapes were created. It also gives evidence that this uplift only occurred in the last few million years, a time scale which does not fit the plate tectonics theory. Another fascinating part of the evidence, shows that mountain uplift correlates very well with climatic change. Mountain building could have been responsible for the onset of the ice age. It certainly resulted in the creation of new environments. Fossil plants and animals are used in places to work out the time of mountain uplift, which in turn helps to explain biogeographical distributions.

map of the carpathian mountains: Xenophobic Mountains Alexandra Cotofana, 2022-09-19 This book, based on ethnographic research in Romania, traces the ontological red lines that form a world in which xenophobic landscapes are possible. The last couple hundred years in Romania's history have been marked by change of political regimes, but this manuscript pays equal attention to an important continuity in Romania's ontological world: its understanding of the landscape, and the relationship between Romanian people and their land. From political discourses to children's books, to literature, and explanations found for everyday events, the book follows the ways in which the landscape of Romania has been understood as a sentient being imbued with willpower and ability to act on the world. The sentience specific to Romania's landscape is characterized by xenophobia—a fear and distrust of ethno-religious others—that has been historically interpreted by Romanians as manifesting through acts of violence enacted by the landscape towards various groups of humans understood as dangerous to the country's unity. The novelty of this book lies in the fact that it is an in-depth analysis of an ontological world in which sentient landscapes are de-romanticized and presented in their uncomfortable complexity. The concept of sentient xenophobic mountains can add a great deal to the current literature on the ontological turn and ontological multiplicities, by questioning binaries like colonized/colonizer, indigenous/colonial, sentient landscape/industrial superpower. Romania's history makes it a good case study for this exercise, as the country has been at the margins of empires, both desired because of its natural resources and rejected because of the perceived inferiority of its people, both racialized and racist, both neoliberal and imagining absolute sovereignty.

map of the carpathian mountains: The Carpathians Patrice M. Dabrowski, 2021-10-15 In The Carpathians, Patrice M. Dabrowski narrates how three highland ranges of the mountain system found in present-day Poland, Slovakia, and Ukraine were discovered for a broader regional public. This is a story of how the Tatras, Eastern Carpathians, and Bieszczady Mountains went from being terra incognita to becoming the popular tourist destinations they are today. It is a story of the encounter of Polish and Ukrainian lowlanders with the wild, sublime highlands and with the indigenous highlanders—Górale, Hutsuls, Boikos, and Lemkos—and how these peoples were incorporated into a national narrative as the territories were transformed into a native/national

landscape. The set of microhistories in this book occur from about 1860 to 1980, a time in which nations and states concerned themselves with the frontier at the edge. Discoverers not only became enthralled with what were perceived as their own highlands but also availed themselves of the mountains as places to work out answers to the burning questions of the day. Each discovery led to a surge in mountain tourism and interest in the mountains and their indigenous highlanders. Although these mountains, essentially a continuation of the Alps, are Central and Eastern Europe's most prominent physical feature, politically they are peripheral. The Carpathians is the first book to deal with the northern slopes in such a way, showing how these discoveries had a direct impact on the various nation-building, state-building, and modernization projects. Dabrowski's history incorporates a unique blend of environmental history, borderlands studies, and the history of tourism and leisure.

Fossils of the Carpathian Region describes and illustrates the region's fossils, recounts their history, and tells the stories of key people involved in paleontological research in the area. In addition to covering all the important fossils of this region, special attention is given to rare finds and complete skeletons. The region's fossils range from tiny foraminifera to the Transylvanian dinosaurs and mammals of the Carpathian Basin. The book also gives nonspecialists the opportunity to gain a basic understanding of paleontology. Sidebars present brief biographies of important figures and explain how to collect, prepare, and interpret fossils. An excellently written scientific book. . . . The good illustrations are an incentive to start reading and dive into the wide area covered by two experts in their respective fields. . . . Against a geopolitical background (well-illustrated with 14 maps), it covers the last decade of the Roman empire as a superpower of the ancient world, the catastrophic crisis of the seventh century and the means whereby its embattled Byzantine successor hung on in Constantinople and Asia Minor until the Abbasid Caliphate's decline opened up new perspectives for Christian power in the Near East. Not confined to any narrow definition of Byzantine history, the empire's neighbours, allies and enemies in Europe and Asia also receive extensive treatment.
