Bryan, 2025-04-12 The remarkable discovery of the molecule nitric oxide or NO back in the early 1980s revolutionized vascular biology and the understanding of chronic disease. This discovery was deemed so important, a Nobel Prize in Medicine or Physiology was awarded in 1998 to three U.S. scientists responsible for its discovery. Despite the recognition of the importance of nitric oxide, medical science has been largely unsuccessful at developing safe and effective nitric oxide-based therapies. This is primarily due to the fact that Nitric Oxide is a gas that, when produced, is gone in less than one second. One man and his discoveries have cracked the code on developing a solid dose form of nitric oxide gas as an oral delivery and also a dual-chamber delivery for topical applications of nitric oxide gas. This personal journey will highlight the hurdles, the failures, disappointment and the persistence and confidence to continually move forward based on the belief that these discoveries would change the world. This book will inspire, motivate and encourage others to follow their dreams and not give up even when it seems the cards are stacked against you. never never give in: Time Biases Meghan Sullivan, 2018-06-20 Should you care less about your

distant future? What about events in your life that have already happened? How should the passage of time affect your planning and assessment of your life? Most of us think it is irrational to ignore the future but completely harmless to dismiss the past. But this book argues that rationality requires temporal neutrality: if you are rational you don't engage in any kind of temporal discounting. The book draws on puzzles about real-life planning to build the case for temporal neutrality. How much should you save for retirement? Does it make sense to cryogenically freeze your brain after death? How much should you ask to be compensated for a past injury? Will climate change make your life meaningless? Meghan Sullivan considers what it is for you to be a person extended over time, how

time affects our ability to care about ourselves, and all of the ways that our emotions might bias our rational planning. Drawing substantially from work in social psychology, economics and the history of philosophy, the book offers a systematic new theory of rational planning.

Richly illustrated with both brief and extensively detailed analytic case reports, *Injured Men* describes the manifestations of such phenomena as physical and sexual abuse, unresolved grief, genocidal persecution, intergenerational transmission of trauma, and of course, combat.
