

ocr a level chemistry specification

OCR A Level Chemistry Specification

OCR A Level Chemistry Specification provides a comprehensive framework for students studying chemistry at the advanced level in the UK. It is designed to develop a deep understanding of chemical principles, fostering both theoretical knowledge and practical skills. The specification emphasizes a broad range of topics, from foundational concepts to advanced applications, ensuring students are well-prepared for higher education and careers in science, medicine, engineering, and related fields. This article explores the key components of the OCR A Level Chemistry specification, detailing the core topics, assessment criteria, and how the syllabus is structured to promote scientific literacy and analytical skills.

Overview of the OCR A Level Chemistry Specification

Core Principles and Aims

- Develop a thorough understanding of chemical concepts and their applications in real-world contexts.
- Enhance practical skills through a range of experimental techniques and investigations.
- Foster analytical and problem-solving abilities to interpret data and make scientific judgments.
- Encourage awareness of the societal, environmental, and historical aspects of chemistry.

Structure of the Specification

The OCR A Level Chemistry course is divided into several modules, each focusing on specific themes and concepts. These modules integrate theoretical content with practical skills, ensuring a balanced approach to learning.

Modules and Content Breakdown

H432/01: Foundation Topics

This module covers fundamental chemical principles that underpin the rest of the course.

- **Atomic Structure and the Periodic Table**
- **Bonding and Structure**
- **Redox and Oxidation States**
- **Inorganic Chemistry**
- **The Periodic Table**

H432/02: Physical Chemistry

Focuses on the principles governing chemical reactions and physical properties.

- Amount of Substance (moles, Avogadro's constant)
- Energetics (enthalpy, entropy, Gibbs free energy)
- Rates of Reaction and Equilibrium
- Acids and Bases
- Oxidation and Reduction

H432/03: Organic Chemistry

Explores carbon-based chemistry, including mechanisms, synthesis, and analysis.

- Hydrocarbons (alkanes, alkenes, aromatic compounds)
- Functional Groups (alcohols, aldehydes, ketones, carboxylic acids, esters)
- Mechanisms of Organic Reactions
- Isomerism and Stereochemistry
- Spectroscopic and Analytical Techniques

H432/04: Practical Skills and Investigations

This module emphasizes practical techniques, data analysis, and experimental design.

- Practical techniques such as titrations, filtration, chromatography, and calorimetry
- Designing and planning experiments
- Data collection, processing, and evaluation
- Safety and ethical considerations in practical work

Assessment Structure

Examinations

The OCR A Level Chemistry assessment comprises three written exams, each testing different aspects of the syllabus:

1. **Paper 1: Foundations in Chemistry** – Assesses core concepts including atomic structure, bonding, and basic inorganic chemistry.
2. **Paper 2: The Periodic Table and Modern Chemistry** – Focuses on inorganic chemistry, periodicity, and physical chemistry topics.
3. **Paper 3: Advanced Organic and Analytical Chemistry** – Covers organic synthesis, spectroscopic techniques, and practical applications.

Practical Endorsement

Alongside written exams, students undertake a practical endorsement, which involves:

- Performing a range of practical tasks
- Recording and analyzing experimental data
- Demonstrating safety and competence in laboratory techniques

Key Skills and Learning Outcomes

Scientific Knowledge and Understanding

- Recall and apply chemical concepts and theories accurately.
- Explain chemical phenomena using appropriate terminology and models.

Practical and Investigative Skills

- Design and carry out experiments effectively.
- Use laboratory equipment safely and accurately.
- Analyze data critically and draw valid conclusions.

Application and Analysis

- Apply knowledge to unfamiliar contexts and problem-solving scenarios.
- Interpret experimental data using mathematical and graphical techniques.

Teaching and Learning Approaches

OCR emphasizes a combination of theoretical lessons, practical work, and independent research. Active learning strategies include:

- Interactive demonstrations and simulations
- Laboratory investigations to develop practical skills
- Use of digital resources and online platforms for revision and research
- Group discussions and problem-solving exercises

Preparation Tips for Students

- Master key concepts and terminologies early to build a solid foundation.
- Practice past exam questions regularly to improve application skills.
- Engage actively in practical sessions to develop confidence and competence.
- Utilize revision guides, online tutorials, and study groups for reinforcement.
- Stay updated with scientific news and real-world applications of chemistry.

Conclusion

The OCR A Level Chemistry Specification is designed to produce well-rounded, competent chemists equipped with both theoretical knowledge and practical skills. Its structured approach ensures students acquire a thorough understanding of key concepts, develop analytical thinking, and appreciate the relevance of chemistry in everyday life and future careers. Success in this qualification depends on diligent study, active engagement in practical work, and continuous practice in applying concepts to various contexts. By following the detailed curriculum and assessment criteria, students can aim for excellence and lay a strong foundation for further scientific pursuits.

Frequently Asked Questions

What are the key topics covered in the OCR A Level Chemistry specification?

The OCR A Level Chemistry specification covers topics such as atomic structure, bonding, periodicity, energy changes, kinetics, chemical equilibria, acids and bases, organic chemistry, and analytical techniques.

How is the OCR A Level Chemistry assessment structured?

The assessment consists of three written papers: Paper 1 (Foundation Chemistry), Paper 2 (Higher Chemistry), and Paper 3 (Practical Skills and Data Handling). Each tests different aspects, including multiple-choice, structured questions, and practical data analysis.

What are the main practical skills required in the OCR A Level Chemistry specification?

Students must demonstrate skills such as accurate titrations, preparation of standard solutions, chromatography, and analysis of experimental data, as outlined in the practical endorsement component.

How does the OCR specification emphasize organic chemistry concepts?

Organic chemistry is a major component, focusing on mechanisms, functional groups, synthesis pathways, and spectroscopy techniques, with practical and theoretical assessments integrated into the syllabus.

Are there any specific mathematical skills emphasized in the OCR A Level Chemistry specification?

Yes, students need to be proficient in calculations involving molar calculations, equilibria, pH, and energetics, including algebraic manipulation and interpretation of data.

What are some effective revision strategies for OCR A Level Chemistry students?

Effective strategies include practicing past papers, mastering key concepts and equations, conducting practical experiments, creating mind maps, and regularly reviewing theoretical and practical content.

How does the OCR A Level Chemistry specification prepare students for university chemistry courses?

It provides a strong foundation in chemical principles, experimental techniques, and mathematical skills, ensuring students are well-prepared for higher education in chemistry or related sciences.

What resources are recommended for studying the OCR A Level Chemistry specification?

Recommended resources include OCR-approved textbooks, online platforms like Kerboodle, past exam papers, practical guides, and revision videos from reputable educators.

How are practical skills assessed in the OCR A Level Chemistry course?

Practical skills are assessed through a practical endorsement alongside written exams, requiring students to plan, perform, analyze, and evaluate experiments as part of their coursework.

Additional Resources

OCR A Level Chemistry Specification: An In-Depth Overview

Understanding the OCR A Level Chemistry specification is essential for students aiming to excel in their examinations and develop a comprehensive grasp of fundamental chemical concepts. This detailed review provides an in-depth analysis of the specification, highlighting key topics, structural framework, assessment objectives, and the skills students are expected to acquire. Whether you're a student preparing for the exam or an educator designing a teaching plan, this guide offers valuable

insights into the scope and depth of OCR's A Level Chemistry curriculum.

Introduction to the OCR A Level Chemistry Specification

The OCR A Level Chemistry specification is a structured framework designed to develop students' understanding of core chemical principles, experimental techniques, and real-world applications. It emphasizes both theoretical knowledge and practical skills, preparing students for higher education and careers in scientific fields.

Key features include:

- A clear progression from foundational concepts to more advanced topics.
- Integration of practical and theoretical chemistry.
- Focus on analytical skills, scientific reasoning, and problem-solving.
- A balance between inorganic, organic, and physical chemistry.

Specification Structure and Content Overview

The OCR A Level Chemistry syllabus is divided into several main modules, each focusing on different aspects of chemistry. These modules are designed to build upon each other, ensuring a cohesive learning experience.

1. Foundation in Chemistry

- Atomic structure and the periodic table
- Bonding and structure
- Redox reactions
- Quantitative chemistry
- Organic chemistry fundamentals

2. Elements, Compounds, and Mixtures

- Group 1 and 2 elements
- Halogens and noble gases
- Transition metals
- Properties and reactions

3. Physical Chemistry

- Atomic structure and isotopes
- Bonding and energetics
- Kinetics and equilibrium
- Thermodynamics
- Acid-base equilibria

4. Organic Chemistry

- Alkanes, alkenes, and halogenoalkanes
- Alcohols, aldehydes, ketones, carboxylic acids
- Amines, polymers, and nitrogen chemistry

5. Inorganic Chemistry

- Periodicity and properties of elements
- Transition metals and coordination chemistry
- The chemistry of the main group elements

6. Practical Skills and Investigations

- Experimental techniques
- Data analysis
- Practical assessments and carried-out investigations

Key Topics in Detail

Atomic Structure and the Periodic Table

Understanding atomic structure is fundamental. The specification covers:

- Electron configuration and its relation to element properties
- Isotopes and relative atomic masses
- The development of the periodic table, including Mendeleev's contributions
- Periodic trends such as atomic radius, ionization energy, electronegativity, and their explanations

Bonding and Structure

This section explains:

- Ionic, covalent, metallic, and van der Waals forces
- Shapes of molecules (VSEPR theory)
- The influence of bonding on physical properties such as melting points, boiling points, solubility
- The role of d-orbitals in transition metal bonding

Redox Reactions

Students learn:

- Oxidation states and their calculation
- Oxidation and reduction processes
- Displacement reactions
- Redox titrations for quantitative analysis
- Electrochemical cells and standard electrode potentials

Quantitative Chemistry

This involves:

- Calculations involving the mole concept
- Empirical and molecular formulas

- Percentage yields and atom economy
- Concentration calculations (molarity, molality)
- Titration techniques and error analysis

Organic Chemistry Fundamentals

Key organic concepts include:

- Nomenclature of organic compounds
- Isomerism (structural, geometric, optical)
- Reaction mechanisms (substitution, elimination, addition)
- Stereochemistry
- Functional group transformations

Assessment Objectives and Skills Development

The OCR specification emphasizes developing a wide range of skills:

- Knowledge and understanding of chemical concepts
- Application of principles to unfamiliar contexts
- Analysis and evaluation of experimental data
- Practical skills, including planning, conducting, and analyzing experiments
- Mathematical skills relevant to chemical calculations

Assessment objectives are aligned with these skills, ensuring students demonstrate proficiency across theoretical and practical domains.

Practical Skills and Investigations

Practical work is integral to the OCR specification, with students expected to:

- Conduct experiments accurately and safely
- Record and analyze data systematically
- Use appropriate techniques, such as titrations, chromatography, and calorimetry
- Evaluate experimental procedures and results critically

Assessment includes a practical endorsement, which is separate from the written exam but equally vital for overall achievement.

Examination Structure and Question Types

The OCR A Level Chemistry assessment typically comprises:

- Multiple-choice questions testing breadth of knowledge
- Structured questions requiring detailed explanations and calculations
- Extended response questions assessing understanding and application
- Practical-based questions linked to experimental work

Questions are designed to test recall, understanding, and higher-order skills such as analysis and evaluation.

Key Concepts and Their Interconnections

The specification emphasizes understanding the interconnectedness of concepts:

- How atomic structure influences periodic trends
- The relationship between bonding, structure, and physical properties
- The link between energetics, kinetics, and equilibrium
- How organic reactions proceed via mechanisms
- The role of transition metals in catalysis and industrial processes

Mastering these connections enables students to approach problems holistically.

Real-World Applications and Contexts

The specification integrates chemistry with real-world issues:

- Environmental chemistry, such as pollution and green chemistry
- Industrial processes, including extraction and manufacturing
- Medicinal chemistry and pharmaceuticals
- Material science and nanotechnology

This contextual approach enhances engagement and demonstrates the relevance of chemistry in everyday life.

Preparation Tips and Resources

For students aiming to succeed:

- Master core concepts early: Build a solid foundation in atomic structure, bonding, and basic calculations.
- Practice practical skills: Conduct experiments regularly, analyze data, and understand safety protocols.

- Use past papers: Familiarize yourself with question styles and time management.
- Engage with resources: Use textbooks, online tutorials, and revision guides aligned with the OCR specification.
- Stay updated: Be aware of any changes or updates to the specification from OCR.

Conclusion

The OCR A Level Chemistry specification offers a comprehensive and rigorous framework that prepares students not only for university-level chemistry but also for careers in science, medicine, environmental science, and industry. Its balanced emphasis on theory, practical skills, and real-world applications ensures a well-rounded education. By understanding the detailed requirements and structuring your study accordingly, you set yourself on a path to success in this challenging and rewarding subject.

In summary, mastering the OCR A Level Chemistry specification involves understanding a broad spectrum of topics—from atomic theory and bonding to organic synthesis and environmental chemistry—coupled with developing analytical and practical skills. This detailed exploration aims to serve as a guide to navigating the specification effectively and excelling in your chemistry journey.

Ocr A Level Chemistry Specification

ocr a level chemistry specification: OCR A level Chemistry Student Book 1 Mike Smith, John Older, 2015-06-26 Exam Board: OCR Level: A-level Subject: Chemistry First Teaching: September 2015 First Exam: June 2016 This is an OCR endorsed resource Stretch and challenge your students' knowledge and understanding of Chemistry, build their mathematical and practical skills, and provide plenty of assessment guidance with this OCR Year 1 Student Book. - Build understanding with a summary of prior knowledge and diagnostic questions at the start of each chapter to help bring students up to speed - Support practical assessment with Practical Skill summaries that help develop your students' knowledge and skills - Test understanding and provide plenty of practice to assess progression, with Test Yourself Questions and multiple choice questions - Provide mathematical support with examples of method integrated throughout and a dedicated 'Maths in Chemistry' chapter - Develop understanding with free online access to Test yourself Answers, an Extended Glossary, Learning Outcomes and Topic Summaries OCR A Level Chemistry Student Book 1 includes AS Level

ocr a level chemistry specification: OCR A Level Chemistry Student Book 2 Mike Smith, John Older, 2015-09-11 Exam Board: OCR Level: A-level Subject: Chemistry First Teaching: September 2015 First Exam: June 2017 This is an OCR endorsed resource Stretch and challenge your students' knowledge and understanding of Chemistry, build their mathematical and practical skills, and provide plenty of assessment guidance with this OCR Year 2 Student Book. - Build understanding with a summary of prior knowledge and diagnostic questions at the start of each chapter to help bring students up to speed - Support practical assessment with Practical Skill summaries that help develop your students' knowledge and skills - Test understanding and provide

plenty of practice to assess progression, with Test Yourself Questions and multiple choice questions - Provide mathematical support with examples of method integrated throughout and a dedicated 'Maths in Chemistry' chapter - Develop understanding with free online access to Test yourself Answers, an Extended Glossary, Learning Outcomes and Topic Summaries

ocr a level chemistry specification: OCR A-level Chemistry Student Guide: Practical Chemistry Nora Henry, 2017-09-11 Exam Board: OCR Level: AS/A-level Subject: Chemistry First Teaching: September 2015 First Exam: Summer 2016 Ensure your students get to grips with the core practicals and develop the skills needed to succeed with an in-depth assessment-driven approach that builds and reinforces understanding; clear summaries of practical work with sample questions and answers help to improve exam technique in order to achieve higher grades. Written by experienced teacher Nora Henry, this Student Guide for practical Chemistry: - Help students easily identify what they need to know with a concise summary of required practical work examined in the A-level specifications. - Consolidate understanding of practical work, methodology, mathematical and other skills out of the laboratory with exam tips and knowledge check questions, with answers in the back of the book. - Provide plenty of opportunities for students to improve exam technique with sample answers, examiners tips and exam-style questions. - Offer support beyond the Student books with coverage of methodologies and generic practical skills not focused on in the textbooks.

ocr a level chemistry specification: *OCR A Level Year 2 Chemistry A Student Guide: Module 5* Mike Smith, 2016-05-16 Exam Board: OCR Level: A-level Subject: Chemistry First Teaching: September 2015 First Exam: Summer 2017 Written by experienced author Mike Smith, this Student Guide for Chemistry: -Identifies the key content you need to know with a concise summary of topics examined in the A-level specifications -Enables you to measure your understanding with exam tips and knowledge check questions, with answers at the end of the guide -Helps you to improve your exam technique with sample answers to exam-style questions -Develops your independent learning skills with content you can use for further study and research.

ocr a level chemistry specification: *OCR(A) A2 Chemistry Student Unit Guide: Unit F325 Equilibria, Energetics and Elements* Mike Smith, 2009-06-26 Student Unit Guides are perfect for revision. Each guide is written by an examiner and explains the unit requirements, summarises the relevant unit content and includes a series of specimen questions and answers. There are three sections to each guide: Introduction - includes advice on how to use the guide, an explanation of the skills being tested by the assessment objectives, an outline of the unit or module and, depending on the unit, suggestions for how to revise effectively and prepare for the examination questions. Content Guidance - provides an examiner's overview of the module's key terms and concepts and identifies opportunities to exhibit the skills required by the unit. It is designed to help students to structure their revision and make them aware of the concepts they need to understand the exam and how they might analyse and evaluate topics. Question and Answers - sample questions and with graded answers which have been carefully written to reflect the style of the unit. All responses are accompanied by commentaries which highlight their respective strengths and weaknesses, giving students an insight into the mind of the examiner.

ocr a level chemistry specification: **OCR A Chemistry A2 Student Unit Guide: Unit F325 New Edition: Equilibria, Energetics and Elements ePub** Mike Smith, 2013-02-22 Written by a former senior examiner, Mike Smith, this OCR(A) A2 Chemistry Student Unit Guide is the essential study companion for Unit F325: Equilibria, Energetics and Elements. This full-colour book includes all you need to know to prepare for your unit exam: clear guidance on the content of the unit, with topic summaries, knowledge check questions and a quick-reference index examiner's advice throughout, so you will know what to expect in the exam and will be able to demonstrate the skills required exam-style questions, with graded student responses, so you can see clearly what is required to get a better grade

ocr a level chemistry specification: Essential A2 Chemistry for OCR Janet Renshaw, Ted Lister, 2004 Essential A2 Chemistry for OCR provides clear progression with challenging material

for in-depth learning and understanding. Written by the best-selling authors of New Understanding Chemistry these texts have been written in simple, easy to understand language and each double-page spread is designed in a contemporary manner. Fully networkable and editable Teacher Support CD-ROMs are also available for this series containing worksheets, marking schemes and practical help.

ocr a level chemistry specification: OCR AS/A Level Chemistry A Student Guide: Modules 3 and 4 Mike Smith, 2015-11-30 Exam Board: OCR Level: AS/A-level Subject: Chemistry First Teaching: September 2015 First Exam: Summer 2016 Written by experienced author Mike Smith, this Student Guide for Chemistry: - Helps identify what you need to know with a concise summary of the topics examined in the AS and A-level specifications - Consolidates understanding with tips and knowledge check questions - Provides opportunities to improve exam technique with sample answers to exam-style questions - Develops independent learning and research skills - Provides the content for generating individual revision notes

ocr a level chemistry specification: Essential AS Chemistry for OCR Ted Lister, Janet Renshaw, 2004 Essential AS Chemistry for OCR provides clear progression with challenging material for in-depth learning and understanding. Written by the best-selling authors of New Understanding Chemistry these texts have been written in simple, easy to understand language and each double-page spread is designed in a contemporary manner. Fully networkable and editable Teacher Support CD-ROMs are also available for this series; they contain worksheets, marking schemes and practical help.

ocr a level chemistry specification: My Revision Notes: OCR A Level Chemistry A Mike Smith, 2017-02-06 Exam Board: OCR Level: A-Level Subject: Chemistry First Teaching: September 2015 First Exam: Summer 2016 With My Revision Notes: OCR A Level Chemistry A you can: - Manage your own revision with step-by-step support from experienced teacher and examiner Mike Smith - Apply biological terms accurately with the help of definitions and key words - Plan and pace your revision with the revision planner - Test understanding with questions throughout the book - Get exam ready with last minute quick quizzes available on the Hodder Education website

ocr a level chemistry specification: Aiming for an A in A-level Chemistry Sarah Longshaw, 2018-10-01 Exam Board: AQA, Edexcel, CCEA, OCR, WJEC Eduqas Level: A-level Subject: Chemistry First teaching: September 2015 First exams: Summer 2017 Master the skills you need to set yourself apart and hit the highest grades; this year-round course companion develops the higher-order thinking skills that top-achieving students possess, providing step-by-step guidance, examples and tips for getting an A grade. Written by experienced author and teacher Sarah Longshaw, Aiming for an A in A-level Chemistry: - Helps you develop the 'A grade skills' of analysis, evaluation, creation and application - Takes you step by step through specific skills you need to master in A-level Chemistry, including scientific reading, quantitative and practical skills, so you can apply these skills and approach each exam question as an A/A* candidate - Clearly shows how to move up the grades with sample responses annotated to highlight the key features of A/A* answers - Helps you practise to achieve the levels expected of top-performing students, using in-class or homework activities and further reading tasks that stretch towards university-level study - Perfects exam technique through practical tips and examples of common pitfalls to avoid - Cultivates effective revision habits for success, with tips and strategies for producing and using revision resources - Supports all exam boards, outlining the Assessment Objectives for reaching the higher levels under the AQA, Edexcel, OCR, WJEC/Eduqas and CCEA specifications.

ocr a level chemistry specification: Chemistry Max Parsonage, 2001 A guide designed to cover the A/AS-level specifications being implemented in schools from September 2000. Many students will take modular exams throughout the course, and these guides will support their revision and exam preparation over the two A-level years (or over a single year for AS level).

ocr a level chemistry specification: Learning to Teach Science in the Secondary School Rob Toplis, Jenny Frost, 2010-04-15 Learning to Teach Science in the Secondary School, now in its third edition, is an indispensable guide to the process and practice of teaching and learning science. This

new edition has been fully updated in the light of changes to professional knowledge and practice – including the introduction of master level credits on PGCE courses – and revisions to the national curriculum. Written by experienced practitioners, this popular textbook comprehensively covers the opportunities and challenges of teaching science in the secondary school. It provides guidance on: the knowledge and skills you need, and understanding the science department at your school development of the science curriculum in two brand new chapters on the curriculum 11-14 and 14-19 the nature of science and how science works, biology, chemistry, physics and astronomy, earth science planning for progression, using schemes of work to support planning, and evaluating lessons language in science, practical work, using ICT, science for citizenship, Sex and Health Education and learning outside the classroom assessment for learning and external assessment and examinations. Every unit includes a clear chapter introduction, learning objectives, further reading, lists of useful resources and specially designed tasks – including those to support Masters Level work – as well as cross-referencing to essential advice in the core text *Learning to Teach in the Secondary School*, fifth edition. *Learning to Teach Science in the Secondary School* is designed to support student teachers through the transition from graduate scientist to practising science teacher, while achieving the highest level of personal and professional development.

ocr a level chemistry specification: *Advanced Chemistry* Michael Clugston, Rosalind Flemming, 2000-06-08 Carefully researched by the authors to bring the subject of chemistry up-to-date, this text provides complete coverage of the new A- and AS-level core specifications. The inclusion of objectives and questions make it suitable for self study.

ocr a level chemistry specification: *Why Teach Philosophy in Schools?* Jane Gatley, 2023-03-09 This book presents a case for teaching philosophy in schools. It develops two original arguments for teaching philosophy to all students at some point over the course of their education. Gatley argues that teaching philosophy is the best way to help students to think clearly using ordinary, or non-specialist concepts such as 'good', 'truth', or 'happiness'. She goes on to argue that teaching philosophy is the best way to help students to make sense of the different conceptual schemes used by different school subjects. Combining these two arguments, Gatley suggests that these two roles for philosophy are central to the task of educating people, and so philosophy ought to be included on school curricula. Building on the work of philosophers of education including Richard Stanley Peters, Harry Brighouse, Matthew Lipman, Mary Midgley and Martha Nussbaum, the book covers a range of topics including Philosophy for Children (P4C), the aims education, religious education, curriculum design and education policy.

ocr a level chemistry specification: *Salters Advanced Chemistry* George Burton, 2000-07-31 The texts in the Salters' Advanced Chemistry series have been updated to match the specifications for A Level Chemistry from September 2000. This supplement pack is designed to help teachers to use the original editions of the texts until they can be replaced.

ocr a level chemistry specification: *Advanced Economics Through Diagrams* Andrew Gillespie, 2001 DT These highly successful revision guides have been brought right up-to-date for the new A Level specifications introduced in September 2000. DT Oxford Revision Guides are highly effective for both individual revision and classroom summary work. The unique visual format makes the key concepts and processes, and the links between them, easier to memorize. DT Students will save valuable revision time by using these notes instead of condensing their own. DT In fact, many students are choosing to buy their own copies so that they can colour code or highlight them as they might do with their own revision notes.

ocr a level chemistry specification: *OCR(B) AS Chemistry (Salters) Student Unit Guide: Unit F332 Chemistry of Natural Resources* Ashley Wheway, 2008-11-28 Student Unit Guides are perfect for revision. Each guide is written by an examiner and explains the unit requirements, summarises the relevant unit content and includes a series of specimen questions and answers. There are three sections to each guide: Introduction - includes advice on how to use the guide, an explanation of the skills being tested by the assessment objectives, an outline of the unit or module and, depending on the unit, suggestions for how to revise effectively and prepare for the examination questions.

Content Guidance - provides an examiner's overview of the module's key terms and concepts and identifies opportunities to exhibit the skills required by the unit. It is designed to help students to structure their revision and make them aware of the concepts they need to understand the exam and how they might analyse and evaluate topics. Question and Answers - sample questions and with graded answers which have been carefully written to reflect the style of the unit. All responses are accompanied by commentaries which highlight their respective strengths and weaknesses, giving students an insight into the mind of the examiner.

ocr a level chemistry specification: Learning to Teach Science in the Secondary School Jenny Frost, 2004-07-15 The second edition of this popular student textbook presents an up-to-date and comprehensive introduction to the process and practice of teaching and learning science in the secondary school.

ocr a level chemistry specification: Chemical Storylines George Burton, 2000 This advanced chemistry text has been updated to match the specification for A Level Chemistry from September 2000. The chemical storylines and related data include the latest developments and they are split clearly into AS and A2 units.
