bullseye from oliver twist: The Dog in the Dickensian Imagination Beryl Gray, 2016-03-23 Fascinated by them, unable to ignore them, and imaginatively stimulated by them, Charles Dickens was an acute and unsentimental reporter on the dogs he kept and encountered during a time when they were a burgeoning part of the nineteenth-century urban and domestic scene. As dogs inhabited Dickens's city, so too did they populate his fiction, journalism, and letters. In the first book-length work of criticism on Dickens's relationship to canines, Beryl Gray shows that dogs, real and invented, were intrinsic to Dickens's vision and experience of London and to his representations of its life. Gray draws on an array of reminiscences by Dickens's friends, family, and fellow writers, and also situates her book within the context of nineteenth-century attitudes towards dogs as revealed in the periodical press, newspapers, and institutional archives. Integral to her study is her analysis of Dickens's texts in relationship to their illustrations by George Cruikshank and Hablot Knight Browne and to portraiture by late eighteenth- and nineteenth-century artists like Thomas Gainsborough and Edwin Landseer. *The Dog in the Dickensian Imagination* will not only enlighten readers and critics of Dickens and those interested in his life but will serve as an important resource for scholars interested in the Victorian city, the treatment of animals in literature and art, and attitudes towards animals in nineteenth-century Britain.

bullseye from oliver twist: The Cry of Nature Stephen F. Eisenman, 2013-10-15 The eighteenth century saw the rise of new and more sympathetic understanding of animals as philosophy, literature, and art argued that animals could feel and therefore possess inalienable rights. This idea gave birth to a diverse movement that affects how we understand our relationship to the natural world. The Cry of Nature details a crucial period in the history of this movement, revealing the significant role art played in the growth of animal rights. Stephen F. Eisenman shows how artists from William Hogarth to Pablo Picasso and Sue Coe have represented the suffering, chastisement, and execution of animals. These artists, he demonstrates, illustrate the lessons of Montaigne, Rousseau, Darwin, Freud, and others—that humans and animals share an evolutionary heritage of sentience, intelligence, and empathy, and thus animals deserve equal access to the domain of moral right. Eisenman also traces the roots of speciesism to the classical world and describes the social role of animals in the demand for emancipation. Instructive, challenging, and always engaging, The Cry of Nature is a book for anyone interested in animal rights, art history, and the history of ideas.
