kingdom of tonga map: Social Structure, Space and Possession in Tongan Culture and Language Svenja Völkel, 2010 This interdisciplinary study investigates the relationship between

culture, language and cognition based on the aspects of social structure, space and possession in Tonga, Polynesia. Grounded on extensive field research, Volkel explores the subject from an anthropological as well as from a linguistic perspective. The book provides new insights into the language of respect, an honorific system which is deeply anchored in the societal hierarchy, spatial descriptions that are determined by socio-cultural and geocentric parameters, kinship terminology and possessive categories that perfectly express the system of social status inequalities among relatives. These examples impressively show that language is deeply anchored in its cultural context. Moreover, the linguistic structures reflect the underlying cognitive frame of its speakers. Just as several cultural practices (sitting order, access to land and gift exchange processes) the linguistic means are not only expressions of stratified social networks but also tools to maintain or negotiate the underlying socio-cultural system.

Today human ecology has split into many different sub-disciplines such as historical ecology, political ecology or the New Ecological Anthropology. The latter in particular has criticised the predominance of the Western view on different ecosystems, arguing that culture-specific world views and human-environment interactions have been largely neglected. However, these different perspectives only tackle specific facets of a local and global hyper-complex reality. In bringing together a variety of views and theoretical approaches, these especially commissioned essays prove that an interdisciplinary collaboration and understanding of the extreme complexity of the human-environment interface(s) is possible.

Ottmar Edenhofer, Ramón Pichs-Madruga, Youba Sokona, Kristin Seyboth, Susanne Kadner, Timm Zwickel, Patrick Eickemeier, Gerrit Hansen, Steffen Schlömer, Christoph von Stechow, Patrick Matschoss, 2011-11-21 This Intergovernmental Panel on Climate Change Special Report (IPCC-SRREN) assesses the potential role of renewable energy in the mitigation of climate change. It covers the six most important renewable energy sources – bioenergy, solar, geothermal, hydropower, ocean and wind energy – as well as their integration into present and future energy systems. It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non-technical obstacles to their application and diffusion. SRREN brings a broad spectrum of technology-specific experts together with scientists studying energy systems as a whole. Prepared following strict IPCC procedures, it presents an impartial assessment of the current state of knowledge: it is policy relevant but not policy prescriptive. SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers, the private sector and academic researchers.

Macro-social marketing is an approach to solving wicked problems. Wicked problems include obesity, environmental degradation, smoking cessation, fast fashion, gambling, and drug and alcohol abuse. As such, wicked problems are those problems that are so complex and multifaceted, it is difficult to define the exact problem, its contributing factors, and paths to a solution. Increasingly,

governments, NGOs, and community groups are seeking to solve these types of problems. In doing so, the issues with pursuing macro-level change are beginning to emerge. Issues stem from the interconnected nature of stakeholders involved with a wicked problem—where one change may create a negative ripple effect of both intended and unintended consequences. Macro-social marketing, then, provides a holistic and systemic approach to both studying and solving wicked problems. Within the chapters of this book, macro-social marketing approaches to analysing and defining wicked problems, to identifying stakeholders and potential ripple effects, and to implementing macro-level change are presented. In this emerging area of academia, the theories, models, and approaches outlined in this book are cutting edge and provide a critical approach from top researchers in the area. Both practical and theoretical aspects are presented as well as caveats on such societal and/or country-wide change. A must-have for social marketing academics and those interested in macro-level change at a practical or theoretical level.
