ways of being james bridle: *Ways of Being* James Bridle, 2022-04-07 What does it mean to be intelligent? Is it something unique to humans - or do we share it with other beings? Recent years have seen rapid advances in 'artificial' intelligence, which increasingly appears to be something stranger than we ever imagined. At the same time, we are becoming more aware of the other intelligences which have been with us all along, unrecognized. These other beings are the animals, plants, and natural systems that surround us, and are slowly revealing their complexity and knowledge - just as the new technologies we've built are threatening to cause their extinction, and

ours. In *Ways of Being*, writer and artist James Bridle considers the fascinating, uncanny and multiple ways of existing on earth. What can we learn from these other forms of intelligence and personhood, and how can we change our societies to live more equitably with one another and the non-human world? From Greek oracles to octopuses, forests to satellites, Bridle tells a radical new story about ecology, technology and intelligence. We must, they argue, expand our definition of these terms to build a meaningful and free relationship with the non-human, one based on solidarity and cognitive diversity. We have so much to learn, and many worlds to gain.

ways of being james bridle: *Ways of Being* James Bridle, 2022-06-21 Artist, technologist, and philosopher James Bridle's *Ways of Being* is a brilliant, searching exploration of different kinds of intelligence—plant, animal, human, artificial—and how they transform our understanding of humans' place in the cosmos. What does it mean to be intelligent? Is it something unique to humans or shared with other beings—beings of flesh, wood, stone, and silicon? The last few years have seen rapid advances in “artificial” intelligence. But rather than a friend or companion, AI increasingly appears to be something stranger than we ever imagined, an alien invention that threatens to decenter and supplant us. At the same time, we're only just becoming aware of the other intelligences that have been with us all along, even if we've failed to recognize or acknowledge them. These others—the animals, plants, and natural systems that surround us—are slowly revealing their complexity, agency, and knowledge, just as the technologies we've built to sustain ourselves are threatening to cause their extinction and ours. What can we learn from them, and how can we change ourselves, our technologies, our societies, and our politics to live better and more equitably with one another and the nonhuman world? The artist and maverick thinker James Bridle draws on biology and physics, computation, literature, art, and philosophy to answer these unsettling questions. Startling and bold, *Ways of Being* explores the fascinating, strange, and multitudinous forms of knowing, doing, and being that make up the world, and that are essential for our survival. ways of being james bridle: Summary of James Bridle's *Ways of Being* Everest Media,, 2022-10-12T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 I tried to build an autonomous vehicle several years ago. It didn't drive itself, but it did take me to some interesting places. The idea of a self-driving car is fascinating to me not for its capabilities, but for its place in our imagination. #2 I wanted to understand AI better, so I trained the car to drive at random, taking almost every side road and turning I came across. By watching me, the car learned to get lost too. #3 The *umwelt* is the environment of a particular organism, and it is created by that organism's knowledge and perceptions. It is a useful concept in robotics as well as biology. #4 The images above illustrate a little of how the car sees the world. The important details are the lines on the side of the road, which are important to the car because they help it stay on the road.

ways of being james bridle: *Mediating Sustainability in the Consumer Society* Astrid Skjerven, Lisbeth Løvbak Berg, Liv Merete Nielsen, Dagny Stuedahl, 2024-12-30 This book sheds light on the role and impact of sustainability mediation, an effective tool for political authorities and business enterprises to persuade consumers of the integrity of their actions, products, and services. In this era of ecological and societal crises fuelled by increasing consumption, sustainability has become a key buzzword and target to attain. Governments around the world argue that they will meet their sustainability goals through environmental actions, by enabling consumers to make better choices and expecting brands to respond accordingly. At the same time, consumers are overwhelmed by the messaging conveyed in sustainability marketing campaigns, often featuring misleading greenwashing, with political authorities, organisations, and business enterprises all having conflicting interests. In this complex scenario, mediation has become a crucial issue. This book offers a critical and multidisciplinary view of sustainability mediation from experts in the fields of philosophy, consumption research, media studies, fashion, design, and citizenship, offering a unique, holistic view. Each chapter highlights different and problematic aspects of the cultural narratives being communicated, for example, the necessity of growth and the notion of a green economy. They

present current theories, methods, indicators, and strategies used to assess and measure the relation between mediation, behaviour, and sustainable development. This book is of interest to scholars, researchers, and postgraduate students in all subject fields concerned with sustainability, including design, visual communication, fashion, consumption, media and journalism, and sustainable development.

Bell, Ebba Högström, Joshua Evans, Alak Paul, Ronan Foley, 2024-11-20 This handbook critically examines spaces of mental health and wellbeing across multiple, often intersecting, domains from green and blue spaces to lived and embodied spaces, creative spaces, work and home spaces, and institutional and post-institutional spaces. The Routledge Handbook on Spaces of Mental Health and Wellbeing features 45 chapters from leading international scholars who collectively interrogate the spatial dimensions of mental health and wellbeing from conceptual and experiential viewpoints. The ways in which these theoretical developments prompt a re-thinking of mental health and wellbeing as concepts is also discussed before presenting some highlights from the handbook's five main sections – (1) green and blue spaces, (2) lived and embodied spaces, (3) creative spaces, (4) work and home spaces, and (5) institutional and post-institutional spaces. The key benefits of this book include a great appreciation of the complex networks and assemblages of mental health and wellbeing, the value of a geographical/spatial approach to thinking about mental health, and the vast array of spaces and places that are implicated in human and posthuman notions of wellbeing. This book will be of interest to students and scholars across the social sciences and the humanities as well as researchers and practitioners in the fields of psychology, psychiatry, social work, nursing, health geography, social and cultural geography, anthropology, mental health social studies, cultural theory, and architecture.

ways of being james bridle: *Mutants, Androids, and Aliens* James A. Tyner, 2025-05-19 In both literature and film, mutants, androids, and aliens have long functioned as humanity's Other—nonhuman bodies serving as surrogates to explore humanity's prejudice, bigotry, and hatred. Scholars working in fields of feminism, ethnic studies, queer studies, and disability studies, among others, have deconstructed representations of the Othered body and the ways these fictional depictions provide insight into the contested terrains of identity, subjectivity, and personhood. In science fiction more broadly and the superhero genre in particular, the fictional Other—often a superhero or a villain—is juxtaposed against the normal human, and such Others have long been the subject of academic investigation. Author James A. Tyner shifts this scholarly focus to consider the ordinary humans who ally with or oppose Othered superheroes. Law enforcement officers, military officials, politicians, and the countless, nameless civilians are all examples of humans who try to make sense of a rapidly changing more-than-human and other-than-human universe. The resulting volume, *Mutants, Androids, and Aliens: On Being Human in the Marvel Cinematic Universe*, provides a critical posthumanist reading of being human in the Marvel Cinematic Universe (MCU). Centering the MCU's secondary human characters, including Matthew Ellis, Ellen Nadeer, Rosalind Price, as well as Jimmy Woo, Sadie Deever, Holden Radcliffe, and others, Tyner considers how these characters attempt to monitor, incarcerate, or exterminate those beings considered unnatural and thus threatening. Placing into conversation posthumanism, environmental ethics, and myriad philosophical and biological ontologies of life and death, Tyner maintains that the superhero genre reflects the current complexities of meaningful life—and of what happens in society when the human is no longer the unquestioned normative standard.

intimate, courageous memoir of a woman shattered by witnessing her eldest brother's horrific suicide when she was a teenager. The book traces her creative journey of recovery and healing with poetry as a constant companion. The primary means of Cyra Dumitru's healing process, from age sixteen through adulthood, is writing poetry and journaling. During this decades-long journey, Cyra experiences a transcendent, loving presence called Voice who guides her and helps her imagine wholeness. She finds community with others through the sharing of poems. She studies poetry as craft and as medicine—becoming a published poet with multiple books, an award-winning college instructor of poetry writing, and a certified practitioner of poetic medicine who creates spaces where others can heal through poetry. In *Words Make a Way through Fire*, Cyra explores the specific medicinal properties of poetry—giving order to interior anxiety, trusting the wisdom within—and invites her brother David to speak through her as he reflects upon his final hours. In doing so, poem by poem, she shifts gradually from being traumatized and feeling haunted to feeling empowered and spiritually expansive.

ways of being james bridle: Machine Vision Jill Walker Rettberg, 2023-09-11 Humans have used technology to expand our limited vision for millennia, from the invention of the stone mirror 8,000 years ago to the latest developments in facial recognition and augmented reality. We imagine that technologies will allow us to see more, to see differently and even to see everything. But each of these new ways of seeing carries its own blind spots. In this illuminating book, Jill Walker Rettberg examines the long history of machine vision. Providing an overview of the historical and contemporary uses of machine vision, she unpacks how technologies such as smart surveillance cameras and TikTok filters are changing the way we see the world and one another. By analysing fictional and real-world examples, including art, video games and science fiction, the book shows how machine vision can have very different cultural impacts, fostering both sympathy and community as well as anxiety and fear. Combining ethnographic and critical media studies approaches alongside personal reflections, *Machine Vision* is an engaging and eye-opening read. It is suitable for students and scholars of digital media studies, science and technology studies, visual studies, digital art and science fiction, as well as for general readers interested in the impact of new technologies on society.

ways of being james bridle: *Solidarity Between Species* Frederic Keck, 2025-05-06 This book examines how the Covid-19 pandemic can be described as a biopolitical crisis, taking into account a fact often overlooked by commentators: Covid-19 is a zoonosis, a disease transmissible between animal species. The Sars-Cov2 virus causing this respiratory disease circulated in bats before passing to humans under as-yet mysterious conditions, and it was transmitted from humans to other species, notably mink and deer. Building on Michel Foucault's revival of the term "biopolitics" and related notions (disciplinary power, pastoral power, cynegetic power), this book traces a set of public health measures taken over the last two centuries to control epidemics. It underlines how the need to conserve virus strains in order to identify and anticipate their mutations has given rise to cryopolitics, a set of techniques aimed at suspending the living in order to defer death. The book then questions the emancipatory scope of this cryopolitics by examining interspecies solidarity built by the warning signals sent by animals to humans about coming threats, be they pandemics, natural disasters, or climate change. By blurring the boundaries between the wild and the domestic resulting from the process of domestication, the politics of zoonoses relies on sentinels who preserve the memory of signs from the past to prepare living beings for future threats by involving them in a common ideal.

ways of being james bridle: *Routledge Handbook of Climate Change and Health System Sustainability* Jeffrey Braithwaite, Yvonne Zurynski, Carolyn K-lynn Smith, 2024-05-20 The Routledge Handbook on Climate Change and Health System Sustainability takes the reader on a journey to understand the interconnectedness of human health, climate change, and healthcare systems. The book begins by exploring how climate change is affecting human health through the increasing frequency of natural disasters, such as bush fires, droughts and heatwaves, and the emergence of new infectious diseases, such as the SARS-CoV2 virus, all of which drive up demand for health services that are already heavily burdened by increasing rates of chronic diseases and ageing populations. Chapters then turn to the contribution of the healthcare system itself to climate change—explaining how current clinical practices, including wasteful care of low value, create an unsustainable carbon footprint and threaten the very viability of healthcare systems. Throughout the volume, descriptions of practical solutions and implemented case studies are used to illustrate the feasibility of taking action in the real world of the healthcare delivery ecosystem. Bringing together a mix of forward-thinking environmental and health researchers, policymakers, leaders, managers, clinicians, patients, and health industry leaders to clarify the current state and future of sustainable healthcare systems, this book will be of interest to researchers and policymakers of climate and health systems.

ways of being james bridle: *Where the Axe Is Buried* Ray Nayler, 2025-04-01 All systems fail. All societies crumble. All worlds end. In the authoritarian Federation, there is a plot to assassinate and replace the President, a man who has downloaded his mind to a succession of new bodies to maintain his grip on power. Meanwhile, on the fringes of a Western Europe that has renounced human governance in favor of ostensibly more efficient, objective, and peaceful AI Prime Ministers, an experimental artificial mind is malfunctioning, threatening to set off a chain of events that may spell the end of the Western world. As the Federation and the West both start to crumble, Lilia, the brilliant scientist whose invention may be central to bringing down the seemingly immortal President, goes on the run, trying to break out from a near-impenetrable web of Federation surveillance. Her fate is bound up with a worldwide group of others fighting against the global status quo: Palmer, the man Lilia left behind in London, desperate to solve the mystery of her disappearance; Zoya, a veteran activist imprisoned in the taiga, whose book has inspired a revolutionary movement; Nikolai, the President's personal physician, who has been forced into more and more harrowing decisions as he navigates the Federation's palace politics; and Nurlan, the hapless parliamentary staffer whose attempt to save his Republic goes terribly awry. And then there is Krotov, head of the Federation's security services, whose plots, agents, and assassins are everywhere. Following the success of his debut novel, *The Mountain in the Sea*, Ray Nayler launches

readers into a thrilling near-future world of geopolitical espionage. A cybernetic novel of political intrigue, *Where the Axe is Buried* combines the story of a near-impossible revolutionary operation with a blistering indictment of the many forms of authoritarianism that suffocate human freedom.

ways of being james bridle: Art, Labour, Text and Radical Care Adam Walker, 2023-12-05 Through developing an ethical-methodological approach of 'radical care', this book explores how critical artistic practice might contribute to the materialisation of more equal, more collectively fulfilling, possibilities of being. The chapters trace a set of interweaving lineages perpetuating inequalities: through labour, the body, and onto-epistemology. Art's all too frequent a-criticality, cooption, or even complicity amidst these lineages is observed, and radical care and the disruptive arttext are developed as twin aspects of an alternative, resistant framework. The book contributes to the critical understanding of inequitable, abstracting processes' growing determination of increasing parts of our world, and foregrounds art's position amidst these. It also functions as an interface, both extending the fertile current discourse around care to a contemporary art focus, and at the same time exploring how radical art practices might contribute to a politics rooted in an ethics of care. The book will be of interest to scholars working in art history, studio art, philosophy and politics.

ways of being james bridle: Turning Points Richard Jochum, Judith M. Burton, Jason Watson, 2023 *Turning Points* invites readers to join in a dialogue about creating more responsive studio art pedagogies for all, following a global pandemic that forced art educators to do what many believed to be impossible: teach studio art online. Amidst this sudden shift, long-simmering social and political challenges pushed to the forefront, such as racial injustice, access to educational resources, economic inequality, and environmental degradation. As these issues compounded, art educators and art students navigated a radical shift in priorities—rethinking the materials, spaces, and relationships that form the foundation of the discipline. This collection of essays brings together international voices from across the field to share the lived experience of responsive teaching during the pandemic, and how we might rebuild a better educational ecosystem. Chapters address how new technologies, more inclusive spaces, and a heightened focus on relationships will reshape the studio art programs of the future. Book Features: Synthesizes diverse cultural viewpoints from both leaders and practitioners in the field of art education. Focuses on the impact of the pandemic and its aftermath on studio art teaching and learning. Connects art education to sociocultural world issues, student wellness, mentorship, equity, and racial inequality. Offers suggestions for how to move the field forward to meet the challenges of the 21st century. Contributors include David Bogen, Bill Gaskins, Michelle Grabner, Samuel Hoi, Steven Henry Madoff, Ernesto Pujol, Seph Rodney, Stacey Salazar, Kimberly Sheridan, Paul A. C. Sproll, Jessica Stockholder, Robert Storr, and Mick Wilson.

ways of being james bridle: Sense-Making Sheryl Boyle, Genevieve Collins, David Howes, 2025-08-22 In this highly innovative work, the senses are liberated from the confines of the present to serve as vehicles for accessing other historical periods and imagined futures. *Sense-Making* builds on the burgeoning field of sensory ethnography by introducing a pair of methodologies—sensory (re)construction and sensorial extrapolation—expressly devised to facilitate time-travel. The first part offers a survey and critique of extant work in sensory archeology and sensory futures. The second part presents a case study of sensory (re)construction in action, focusing on Thornbury Castle (1508–1521) in the UK. The third part probes the life of the senses on the final frontier, the next habitat of humanity—namely, outer space. These sensory case studies are not purely architectural or purely futuristic. They are, at the same time, exercises in arts-based practice or research-creation, where the authors do not just carry out bibliographic research and write about pasts and futures, they make them. *Sense-Making* is necessary reading for the international community of sensory studies scholars, as well as those with interests spanning material culture, museum and heritage studies, visual and auditory culture, experimental psychology, design and digital technology.

ways of being james bridle: Global Indigenous Horror Naomi Simone Borwein, 2025-04-15 Contributions by Katrin Althans, Jayson Althofer, Naomi Simone Borwein, Persephone Braham, Krista Collier-Jarvis, Shane Hawk, Jade Jenkinson, June Scudeler, and Sabrina Zacharias *Global*

Indigenous Horror is a collection of essays that positions Indigenous Horror as more than just a genre, but as a narrative space where the spectral and social converge, where the uncanny becomes a critique, and the monstrous mirrors the human. While contentions swirl around the genre category, this exploratory anthology is the first critical edited collection dedicated solely to ways of theorizing and analyzing Indigenous Horror literature. The essays, curated by scholar Naomi Simone Borwein, ask readers to consider what Global Indigenous Horror is—and to whom. The volume opens with a preface by international bestselling horror writer Shane Hawk (enrolled Cheyenne-Arapaho, Hidatsa, and Potawatomi descent), followed by an overview of Global Indigenous Horror trends, aesthetics, and approaches. The carefully selected contributions explore Indigenous Horror literature and mixed-media narratives worldwide, unraveling the intricate dynamics between the local and global, traditional and contemporary, and human and monstrous. Contributor chapters are grouped not by geographical or cultural variation, but along a spectrum, from a strong emphasis on ways of knowing to a critical inspection of Horror through Indigenous Gothic aesthetics across cultural boundaries and against and beyond nation states.

ways of being james bridle: The Power of Money Robert Pringle, 2019-12-06 Innovation in money is just as important as innovation in any other sphere of activity; money is always a “work in progress.” In fact, history shows societies have tried out a wide diversity of monetary arrangements. Ideas about money have played key roles at crucial turning points in world history and during national histories. Recently, a new global money space has been created, a joint venture between the public and private sector. This book explores the new money society that has grown up to inhabit this new space. The book has several aims: Firstly, the book shows how beliefs about money, as well as attitudes and values towards it, have varied between societies and over time, and specifically how they have changed over the modern era. Secondly, the book shows the powerful effects that changing ideas have had on events, including wars and revolutions, recessions, booms and financial crises. Thirdly, the book recounts the creation of a global money space, dated to the last quarter of the 20th century, and explores its features. Fourthly, the book describes some characteristics of the new money society that inhabits the global money space. Fifthly, the book shows how each society, and indeed successive generations of the same society, has made its own unique arrangements to govern money – i.e. how it comes to terms with the power of money. The author argues that we need to develop a new arrangement now and suggests that we have much to learn from recent creative work in a number of fields ranging from the sociology of money to contemporary art. This approach sheds new light on a number of controversial issues, including the rise of crony capitalism, growing social divisions, currency wars, and asset price bubbles.
