alcaligenes faecalis characteristics

Alcaligenes faecalis Characteristics

Alcaligenes faecalis is a versatile and intriguing bacterium that belongs to the genus Alcaligenes within the family Alcaligenaceae. Recognized for its diverse metabolic capabilities and environmental resilience, A. faecalis has garnered significant interest in microbiology, environmental science, and biotechnology. Its unique characteristics enable it to thrive in various habitats, perform specific biochemical functions, and play roles in both natural and engineered ecosystems. Understanding the detailed traits of Alcaligenes faecalis is essential for appreciating its significance in scientific research and practical applications.

Taxonomy and Morphology

Taxonomic Classification

- Domain: Bacteria
- Phylum: Proteobacteria
- Class: Betaproteobacteria
- Order: Burkholderiales
- Family: Alcaligenaceae
- Genus: Alcaligenes
- Species: Alcaligenes faecalis

Morphological Features

- Cell shape: Rod-shaped (bacillus)
- Size: Usually 0.5 to 0.8 micrometers in width and 1.0 to 3.0 micrometers in length
- Gram staining: Gram-negative
- Motility: Motile due to the presence of flagella
- Colony appearance: Typically form smooth, circular, and convex colonies on nutrient agar; often translucent or slightly pigmented

Physiological and Biochemical Characteristics

Metabolic Capabilities

Alcaligenes faecalis exhibits facultative anaerobic metabolism, allowing it to grow in both the presence and absence of oxygen. It can utilize a wide range of organic compounds,

making it metabolically flexible.

- Carbon source utilization: Capable of metabolizing various sugars, amino acids, and organic acids.
- Nitrogen fixation: Some strains can fix atmospheric nitrogen, contributing to nitrogen cycling.
- Degradation of pollutants: Known for breaking down hydrocarbons, phenols, and other environmental contaminants.

Enzymatic Activities

A. faecalis produces several enzymes that facilitate its diverse metabolic processes:

- Catalase: Breaks down hydrogen peroxide, protecting cells from oxidative damage.
- Oxidase: Typically positive, indicating the presence of cytochrome c oxidase.
- Urease: Some strains are urease-positive, hydrolyzing urea into ammonia and carbon dioxide.
- Nitrate reduction: Capable of reducing nitrates to nitrites or nitrogen gases under anaerobic conditions.

Growth Conditions

- Temperature range: 20°C to 37°C, with optimal growth around 30°C.
- pH range: Grows in neutral to slightly alkaline conditions (pH 7.0–8.5).
- Salinity: Tolerant of moderate salt concentrations but generally prefers freshwater environments.

Genetic and Molecular Features

Genomic Insights

Recent genomic studies have shed light on the genetic makeup of A. faecalis, revealing genes responsible for:

- Metabolic versatility: Genes encoding enzymes for biodegradation pathways.
- Stress response: Genes that help adapt to oxidative stress, osmotic stress, and toxic environments.
- Mobile genetic elements: Plasmids and transposons facilitating horizontal gene transfer, which can contribute to antibiotic resistance or degradation capabilities.

Genetic Manipulation

Due to its genetic plasticity, A. faecalis has been used as a model organism for studying gene expression and regulation in environmental bacteria. Its genetic tools allow researchers to engineer strains for specific biotechnological applications.

Environmental and Ecological Roles

Habitat Distribution

Alcaligenes faecalis is commonly found in various environments, including:

- Soil: Ubiquitous in terrestrial ecosystems where it participates in nutrient cycling.
- Water bodies: Present in freshwater and wastewater systems.
- Animal intestines: Isolated from human and animal feces, hence the name 'faecalis'.
- Decaying organic matter: Contributing to organic matter decomposition.

Role in Biogeochemical Cycles

- Nitrogen cycle: Some strains can convert nitrogen compounds, aiding in soil fertility.
- Organic matter decomposition: Breaks down complex organic molecules, facilitating nutrient recycling.
- Pollutant degradation: Capable of breaking down hydrocarbons, phenols, and other toxic substances, making it valuable in bioremediation.

Applications in Biotechnology and Industry

Bioremediation

A. faecalis's ability to degrade pollutants makes it a promising candidate for cleaning up contaminated environments, such as oil spills or industrial waste sites.

Wastewater Treatment

- Used in activated sludge processes for removing organic contaminants.
- Contributes to nitrogen removal via nitrification and denitrification processes.

Industrial Enzyme Production

- Produces enzymes like urease, which have applications in agriculture and waste management.
- Potential for producing bioplastics or biodegradable materials through metabolic engineering.

Genetic Engineering and Synthetic Biology

- Its genetic flexibility allows for the development of strains tailored for specific tasks, such as pollutant degradation or biosynthesis of valuable compounds.

Pathogenicity and Safety Aspects

Pathogenic Potential

Alcaligenes faecalis is generally considered non-pathogenic to humans; however, it can cause opportunistic infections in immunocompromised individuals.

Antibiotic Resistance

- Some strains have exhibited resistance to antibiotics, raising concerns about treatment options in case of infection.
- Its role in horizontal gene transfer can influence the spread of resistance genes.

Safety Considerations

- Used mainly in environmental and industrial applications under controlled conditions.
- Proper handling and safety protocols are recommended to prevent unintended exposure.

Summary of Key Characteristics

- Gram-negative, rod-shaped, motile bacterium
- Facultative anaerobe, capable of thriving in various environments
- Metabolically versatile, capable of degrading multiple organic pollutants
- Produces key enzymes like catalase, oxidase, urease, and nitrate reductase
- Genetically adaptable, with potential for biotechnological engineering
- Found in soil, water, fecal matter, and decaying organic material
- Contributes to environmental nutrient cycling and bioremediation efforts
- Generally non-pathogenic but can be opportunistic in vulnerable hosts

Conclusion

Alcaligenes faecalis stands out as a bacterium with remarkable adaptability, metabolic diversity, and environmental significance. Its ability to degrade pollutants and participate actively in ecological processes makes it a valuable organism in bioremediation, wastewater treatment, and industrial applications. While generally considered non-

pathogenic, understanding its characteristics ensures safe and effective utilization in various sectors. Ongoing research into its genetics and metabolic pathways continues to unlock new potentials, positioning A. faecalis as a key player in sustainable environmental management and biotechnological innovation.

Frequently Asked Questions

What are the key morphological characteristics of Alcaligenes faecalis?

Alcaligenes faecalis is a Gram-negative, rod-shaped bacterium that is motile with peritrichous flagella. It typically appears as aerobic, catalase-positive, and oxidase-positive bacteria, often forming smooth, convex colonies on agar plates.

What are the common biochemical features used to identify Alcaligenes faecalis?

Alcaligenes faecalis is characterized by its ability to oxidize glucose and amino acids, produce catalase and oxidase enzymes, and often reduce nitrates to nitrites. It generally does not produce acid from glucose fermentation, aiding in its differentiation from other bacteria.

In which environments is Alcaligenes faecalis typically found?

Alcaligenes faecalis is commonly found in soil, water, and sewage environments. It is also part of the normal flora in the human gastrointestinal tract and can be isolated from clinical specimens, especially in hospital settings.

What are the clinical significance and pathogenic potential of Alcaligenes faecalis?

Although generally considered non-pathogenic, Alcaligenes faecalis can cause opportunistic infections such as bacteremia, urinary tract infections, and wound infections, particularly in immunocompromised patients or those with indwelling medical devices.

What are the antibiotic susceptibility patterns of Alcaligenes faecalis?

Alcaligenes faecalis often exhibits variable antibiotic susceptibility, but it is generally resistant to penicillins and first-generation cephalosporins. It may be susceptible to aminoglycosides, fluoroquinolones, and carbapenems, though susceptibility testing is recommended for effective treatment.

Additional Resources

Alcaligenes faecalis Characteristics: A Comprehensive Guide

Alcaligenes faecalis is a fascinating bacterium that has garnered significant attention in microbiology and environmental science due to its unique characteristics and versatile metabolic capabilities. Recognized as a gram-negative, rod-shaped bacterium, Alcaligenes faecalis plays vital roles in natural ecosystems, wastewater treatment, and even biotechnological applications. Understanding its characteristics is essential for microbiologists, environmental engineers, and anyone interested in microbial diversity and function.

Introduction to Alcaligenes faecalis

Alcaligenes faecalis belongs to the genus Alcaligenes, which comprises several species known for their aerobic nature and environmental resilience. Originally isolated from human feces, the species faecalis highlights its association with intestinal environments, although it is also widely found in soil, water, and various contaminated sites.

This bacterium's ability to adapt to diverse environments and its metabolic versatility make it a subject of ongoing research. Its characteristics influence its role in environmental processes and its potential application in bioremediation.

Morphological Characteristics of Alcaligenes faecalis

Shape and Size
- Cell Morphology: Alcaligenes faecalis displays a rod-shaped or bacillus morphology.
- Size Range: Typically measures between 0.5 to 0.8 micrometers in width and 1.5 to 3.0 micrometers in length.

Arrangement
- Cell Arrangement: Usually exists as single cells, but can form pairs or short chains under certain conditions.

Motility
- Flagella: Possesses peritrichous flagella, enabling motility and navigation through aqueous environments.
- Motility Behavior: Exhibits active swimming behavior, which facilitates colonization and biofilm formation.

Gram Staining and Cell Wall Characteristics

Gram Reaction
- Gram-Negative: Alcaligenes faecalis stains pink or red with Gram stain, indicative of a thin peptidoglycan layer surrounded by an outer membrane.

Cell Wall Composition
- Contains lipopolysaccharides (LPS) in the outer membrane, contributing to its structural integrity and interactions with the environment.
- The outer membrane also provides resistance to certain antibiotics and environmental stresses.

Physiological and Metabolic Traits

Oxygen Requirements
- Strict Aerobe: Requires oxygen for growth and metabolic activity.
- Can utilize oxygen as the terminal electron acceptor in the respiratory chain.

Growth Conditions
- Temperature Range: Optimally grows between 25°C and 37°C.
- pH Range: Prefers neutral to slightly alkaline pH (about 7.0 to 8.0).
- Salinity Tolerance: Can tolerate low to moderate salt concentrations, making it adaptable to various environments.

Nutritional Capabilities
- Carbon Sources: Capable of metabolizing a variety of organic compounds, including carbohydrates, amino acids, and organic acids.
- Nitrogen Fixation: Some strains can fix atmospheric nitrogen, although this capability varies among isolates.
- Enzymatic Activities: Produces enzymes such as catalase and oxidase, which are useful in identifying and understanding its metabolic pathways.

Biochemical Properties

Enzyme Production
- Catalase: Breaks down hydrogen peroxide into water and oxygen, contributing to oxidative stress resistance.
- Oxidase: Indicates presence of cytochrome c oxidase, linked to its respiratory capacity.
- Urease: Some strains produce urease, enabling urea hydrolysis.

Metabolic Flexibility
- Capable of utilizing diverse substrates, including:
- Glucose
- Fructose
- Mannose
- Organic acids

This metabolic versatility underscores its adaptability to various environments, especially in nutrient-rich or contaminated habitats.

Environmental and Ecological Roles

Natural Habitats
- Found naturally in soil, freshwater, and marine environments.
- Frequently isolated from wastewater and sewage, reflecting its role in waste decomposition.

Role in Bioremediation
- Known for degrading pollutants such as hydrocarbons, phenols, and other organic contaminants.
- Its ability to metabolize toxic compounds makes it valuable in cleaning polluted environments.

Interaction with Other Microorganisms
- Participates in microbial communities, often forming biofilms on surfaces.
- Contributes to nutrient cycling and organic matter decomposition.

Pathogenic Potential and Safety Aspects

While Alcaligenes faecalis is generally considered non-pathogenic, there are rare reports of opportunistic infections, especially in immunocompromised individuals. It has been isolated from clinical specimens, but its role as a pathogen is minimal compared to more virulent bacteria.

Safety considerations:
- Usually classified as a biosafety level 1 organism.
- Used in laboratory and industrial settings with standard precautions.

Practical Applications of Alcaligenes faecalis

Wastewater Treatment
- Utilized for biological treatment processes due to its ability to degrade organic pollutants.
- Promotes the removal of nitrogen compounds in sewage and industrial effluents.

Bioremediation
- Employed in cleaning up oil spills and contaminated soils.
- Capable of breaking down complex hydrocarbons, making it a candidate for environmental remediation projects.

Industrial Biotechnology
- Investigated for enzyme production, such as proteases and lipases.
- Potential in biosynthesis of value-added products through microbial fermentation.

Summary of Key Characteristics

| Characteristic | Details |

|---|---|
Gram Reaction	Gram-negative
Cell Shape	Rod-shaped (bacillus)
Motility	Motile via peritrichous flagella
Oxygen Requirement	Strict aerobe
Optimal Temperature	25°C - 37°C
pH Range	7.0 - 8.0
Metabolic Capabilities	Degrades organic compounds, nitrogen fixation (some strains)
Enzymes Produced	Catalase, oxidase, urease (variable)
Habitat	Soil, water, sewage, contaminated environments
Pathogenicity	Generally non-pathogenic, opportunistic infections rare

---

Conclusion

Alcaligenes faecalis is a versatile and environmentally significant bacterium with distinctive morphological, physiological, and biochemical characteristics. Its ability to thrive in diverse environments, coupled with its metabolic flexibility, makes it a valuable organism for biotechnological and environmental applications. While primarily considered non-pathogenic, understanding its characteristics is crucial for harnessing its potential safely and effectively.

As research advances, Alcaligenes faecalis continues to reveal new possibilities, from bioremediation to industrial enzyme production. Its characteristics exemplify the remarkable adaptability of bacteria and highlight the importance of microbial diversity in maintaining ecological balance and supporting sustainable technologies.

Alcaligenes Faecalis Characteristics

alcaligenes faecalis characteristics: *Bergey's Manual® of Systematic Bacteriology* James T. Staley, Don J. Brenner, Noel R. Krieg, 2006-07-25 Includes a description of the Alpha-, Beta-, Delta-, and Epsilonproteabacteria (1256 pages, 512 figures, and 371 tables). This large taxa include many well known medically and environmentally important groups. Especially notable are Acetobacter, Agrobacterium, Aquospirillum, Brucella, Burkholderia, Caulobacter, Desulfovibrio, Gluconobacter, Hyphomicrobium, Leptothrix, Myxococcus, Neisseria, Paracoccus, Propionibacter, Rhizobium, Rickettsia, Sphingomonas, Thiobacillus, Xanthobacter and 268 additional genera.

alcaligenes faecalis characteristics: Principles and Practice of Clinical Bacteriology Stephen Gillespie, Peter M. Hawkey, 2006-05-12 Since the publication of the last edition of Principles and Practice of Clinical Bacteriology, our understanding of bacterial genetics and pathogenicity has been transformed due to the availability of whole genome sequences and new technologies such as proteomics and transcriptomics. The present, completely revised second edition of this greatly valued work has been developed to integrate this new knowledge in a clinically relevant manner. Principles and Practice of Clinical Bacteriology, Second Edition, provides the reader with invaluable information on the parasitology, pathogenesis, epidemiology and treatment strategies for each pathogen while offering a succinct outline of the best current methods for diagnosis of human bacterial diseases. With contributions from an international team of experts in the field, this book is an invaluable reference work for all clinical microbiologists, infectious

disease physicians, public health physicians and trainees within these disciplines.

alcaligenes faecalis characteristics: Bailey & Scott's Diagnostic Microbiology Patricia M. Tille, 2021-02-04 **Textbook and Academic Authors Association (TAA) Textbook Excellence Award Winner, 2024****Selected for Doody's Core Titles® 2024 in Laboratory Technology**Perfect your lab skills with the essential text for diagnostic microbiology! Bailey & Scott's Diagnostic Microbiology, 15th Edition Is known as the #1 bench reference for practicing microbiologists and as the preeminent text for students in clinical laboratory science programs. With hundreds of full-color illustrations and step-by-step methods for procedures, this text provides a solid, basic understanding of diagnostic microbiology and also covers more advanced techniques such as matrix-assisted laser desorption time-of-flight mass spectrometry. Written by noted CLS educator Dr. Patricia Tille, Diagnostic Microbiology has everything you need to get accurate lab test results in class and in clinical practice. - More than 800 high-quality, full-color illustrations help you visualize concepts. - Expanded sections on parasitology, mycology, and virology allow you to use just one book, eliminating the need to purchase other microbiology textbooks for these topics. - Hands-on procedures show exactly what takes place in the lab, including step-by-step methods, photos, and expected results. - Case studies allow you to apply your knowledge to diagnostic scenarios and to develop critical thinking skills. - Genera and Species boxes provide handy, at-a-glance summaries at the beginning of each organism chapter. - Learning objectives at the beginning of each chapter provide measurable outcomes to achieve by completing the chapter material. - A glossary defines terms at the back of the book and on the Evolve companion website. - New! Updated content includes infectious disease trends and new illustrations such as culture plate images of real specimens, complex gram stains, lactophenol cotton blue microscopy, and more. - NEW COVID-19 information has been added. - UPDATED topics include the Human Microbiome Project, expanded MALDI-TOF applications and molecular diagnostics in conjunction with traditional microbiology, additional streps, and significant news in mycology. - EXPANDED glossary defines terms on the Evolve companion website.

alcaligenes faecalis characteristics: Hagan and Bruner's Microbiology and Infectious Diseases of Domestic Animals William Arthur Hagan, Dorsey William Bruner, John Francis Timoney, 1988

alcaligenes faecalis characteristics: Nitrogen in Soils of China Zhu Zhao-liang, Wen Qi-xiao, J.R. Freney, 2012-12-06 The study of soil nitrogen has long been an active field, but it was generally pivoted on agricultural and forestry production, and animal husbandry. With the rapid increase in the use of fertilizer nitrogen, more attention has been paid to the rela tionship between nitrogen management and environmental quality and human of soil nitrogen has become more comprehensive with health. In addition, the study the development of related sciences. The quantitative study of the processes in nitrogen cycling and their interrelationships has been an important part of this project and has attracted the attention of scientists allover the world. Nitrogen is one of the most important nutrients for plant growth and the applica tion of fertilizer nitrogen is playing an important role in agricultural production. The annual consumption of fertilizer nitrogen in the world has reached 70 million tons, and China has an annual consumption of more than 15 million tons and is the largest fertilizer nitrogen consumer in the world. However, the efficiency of nitro gen fertilizer is low and losses are large. It is estimated that nitrogen losses from agriculture in our country can be as high as 40-60% of the nitrogen applied. Some of the lost nitrogen enters the atmosphere and contributes to the greenhouse effect and some enters water bodies to pollute the water.

alcaligenes faecalis characteristics: Environmental Chemistry of Arsenic Jr, William T. Frankenberger, 2001-12-04 With contributions from world-renowned experts in the field, this book explores developments in the transport kinetics, seasonal cycling, accumulation, geochemistry, transformation, and toxicology of arsenic. It details advances in the prevention and control of arsenic and arsenic compounds in the air, soil, and water and offers analytical methods for the detection and study of arsenic in the environment and human body. Providing bioremediation techniques for effective treatment of contaminated water supplies, the book discusses factors that influence the

removal of arsenic from water as well as diurnal and seasonal variations in the arsenic concentration of surface water supplies.

alcaligenes faecalis characteristics: Biomaterials David Byrom, 1991-06-18 Biomaterials are produced from biological material and are used for their physical characteristics. This book looks at the range of biomaterials and their applications which range from the use of polysaccharides as thickening agents to the use of proteins as fibres and adhesives.

alcaligenes faecalis characteristics: Denitrification in Soil and Sediment Niels Peter Revsbech, Jan Sørensen, 2013-11-11 The formation of atmospheric nitrogen gas by denitrifying bacteria may represent a significant nutrient sink in natural ecosystems. The rate of denitrification has often been difficult to measure in situ, however, and new methodologies should stimulate research on distribution of activity in space and time. The load of fertilizer nitrogen in modem agriculture has led to increasing nutrient reservoirs in recipient subsoils, aquifers, inland waters and coastal seas. By its conversion of nitrate to atmospheric nitrogen, bacterial denitrification is the only biological process to potentially reduce the impact of increasing nutrient loadings by fertilizer nitrogen in the environment. As part of a scientific program set up by the Danish Ministry of Environment to study environment cycling of nitrogen, phosphorous and organic matter (NPO program) in the light of agricultural, domestic and industrial activities, a symposium on DENITRIFICATION IN SOIL AND SEDIMENT was held at the University of Aarhus, Denmark from 6-9 June 19i\9. On the basis of lectures given at the symposium, this book contains a number of invited contributions on the regulation of denitrification activity (control of enzyme synthesis and activity) and measurement of in situ rates of denitrification in terrestrial and aquatic environments (control factors, diel and seasonal variations, etc). Emphasis has been placed on including the recent improvements in methodologies and current understanding of process regulation, however the book also contains examples of integrated research on the significance of denitrification in environmental nutrient cycling.

alcaligenes faecalis characteristics: Cellulose and Cellulose Derivatives in the Food Industry Tanja Wuestenberg, 2014-08-05 Cellulose and its derivatives can be found in many forms in nature and is a valuable material for all manner of applications in industry. This book is authored by an expert with many years of experience as an application engineer at renowned cellulose processing companies in the food industry. All the conventional and latest knowledge available on cellulose and its derivatives is presented. The necessary details are elucidated from a theoretical and practical viewpoint, while retaining the focus on food applications. This book is an essential source of information and includes recommendations and instructions of a general nature to assist readers in the exploration of possible applications of cellulose and its derivatives, as well as providing food for thought for the generation of new ideas for product development. Topics include gelling and rheological properties, synergistic effects with other hydrocolloids, as well as nutritional and legal aspects. The resulting compilation covers all the information and advice needed for the successful development, implementation, and handling of cellulose-containing products.

alcaligenes faecalis characteristics: Emerging Infectious Diseases , 2017-07

alcaligenes faecalis characteristics: Comparative Virology Karl Maramorosch, Edouard Kurstak, 2014-06-28 Comparative Virology provides an integrated comparison of viruses, based on their chemical and morphological characteristics. These descriptions will not only give the reader a background but also a detailed analysis of the various groups. In some instances the groups are still host related, as in the case of bacteriophages and polyhedral insect viruses. In others, for instance in pox viruses, the group comprises viruses of vertebrates and invertebrates. The hosts of the bacilliform Rhabdovirales range from man and other warm-blooded vertebrates through invertebrate animals to plants. A special chapter is devoted to viruses devoid of protein—a group that is of great interest and that has only recently been recognized. Since there is historical and practical interest in écologie groupings, such as arboviruses and oncogenic viruses, chapters on such groups have also been included. The book opens with a discussion on the classification of viruses. Chapters dealing with DNA viruses and RNA viruses follow, and the ecologically and disease-oriented groups

complete the volume. It is hoped that Comparative Virology will help bring unity to the science of virology through the comparative approach that is not dependent on virus-host interactions. The combined efforts of eminent contributors to discuss and evaluate new information will hopefully benefit all who are interested in virology

alcaligenes faecalis characteristics: Current Developments in Biotechnology and Bioengineering Xuan-Thanh Bui, Wenshan Guo, Chart Chiemchaisri, Ashok Pandey, 2023-02-06 Current Developments in Biotechnology and Bioengineering: Membrane Technology for Sustainable Water and Energy Management covers a variety of advanced technologies for membrane processes, including water/wastewater treatment and reuse, membrane materials, operation and maintenance, fouling control, life cycle assessment, removal of micro/emerging pollutants, and operational cost of membrane processes. Supported by prominent editors and global contributors, this reference contains chapters on membrane treatment strategies for the current pollution of complex organic matters, nutrients, toxic substances, microplastics, membrane fouling control in different water resources, and reusing water resources through promising separation technologies, including reverse osmosis, forward osmosis, and membrane distillation. - Delivers advances on membrane processes, including water and wastewater treatment and reuse by membranes - Provides state-of-the-art information on design and operation of novel membrane systems, energy consumption, fouling control, etc. - Describes hybrid membrane processes

alcaligenes faecalis characteristics: Beneficial Microbes in Agro-Ecology N. Amaresan, M. Senthil Kumar, K. Annapurna, Krishna Kumar, A. Sankaranarayanan, 2020-05-14 Beneficial Microbes in Agro-Ecology: Bacteria and Fungi is a complete resource on the agriculturally important beneficial microflora used in agricultural production technologies. Included are 30 different bacterial genera relevant in the sustainability, mechanisms, and beneficial natural processes that enhance soil fertility and plant growth. The second part of the book discusses 23 fungal genera used in agriculture for the management of plant diseases and plant growth promotion. Covering a wide range of bacteria and fungi on biocontrol and plant growth promoting properties, the book will help researchers, academics and advanced students in agro-ecology, plant microbiology, pathology, entomology, and nematology. - Presents a comprehensive collection of agriculturally important bacteria and fungi - Provides foundational knowledge of each core organism utilized in agro-ecology - Identifies the genera of agriculturally important microorganisms

alcaligenes faecalis characteristics: *Food Hydrocolloids* Katsuyoshi Nishinari, Etsushiro Doi, 1993 About 70 papers from an international conference in Tsukuba, Japan, in November 1992, discuss the various hydrocolloids that are widely used to control the viscoelasticity, emulsification, gelation, dispersion, thickening, and other textural qualities of food products. They consider the recent devel

alcaligenes faecalis characteristics: Handbook of Biodegradable Polymers Catia Bastioli, 2005 This book is a complete guide to polymers, which degrade naturally once they are finished with. This is an especially important topic at the moment as landfill space is getting less and other methods of recycling can be very costly. This book discusses the different types of biodegradable polymers, both naturally occurring and synthetic, and how they are used and the mechanisms for degradation.

alcaligenes faecalis characteristics: *Bailey & Scott's Diagnostic Microbiology - E-BOOK* Patricia M. Tille, 2024-11-06 **Selected for 2025 Doody's Core Titles® in Laboratory Technology**Perfect your lab skills with the essential text for diagnostic microbiology! Bailey & Scott's Diagnostic Microbiology, 16th Edition Is known as the #1 bench reference for practicing microbiologists and the preeminent text for students in clinical laboratory science programs. With hundreds of full-color illustrations and step-by-step methods for procedures, this text provides a solid, basic understanding of diagnostic microbiology and covers more advanced techniques such as matrix-assisted laser desorption time-of-flight mass spectrometry. Written by noted CLS educator Dr. Patricia Tille, Diagnostic Microbiology has everything you need to get accurate lab test results in class and in clinical practice. - NEW! Expanded molecular content enhances each specific organism

area - NEW! Revised life cycle illustrations clarify and reinforce important components - More than 800 high-quality, full-color illustrations help you visualize key concepts - Expanded sections on parasitology, mycology, and virology allow you to use just one book, eliminating the need to purchase other microbiology textbooks for these topics - Case studies and step-by-step procedures in the ebook version (sold separately) and on the Evolve companion website allow you to see what takes place in the lab and to apply your knowledge to diagnostic scenarios - Learning objectives at the beginning of each chapter provide measurable outcomes to achieve by completing the chapter material - Review questions at the end of each chapter in the ebook version (sold separately) and on the Evolve companion website help you apply and assess the knowledge you've learned - Genera and Species boxes provide handy, at-a-glance summaries at the beginning of each organism chapter - A glossary defines terms at the back of the book

alcaligenes faecalis characteristics: *Advances in Energy, Environment and Materials Science* Yeping Wang, Shiquan Zhou, 2016-11-30 The 2016 International Conference on Energy, Environment and Materials Science (EEMS 2016) took place on July 29-31, 2016 in Singapore. EEMS 2016 has been a meeting place for innovative academics and industrial experts in the field of energy and environment research. The primary goal of the conference is to promote research and developmental activities in energy and environment research and further to promote scientific information exchange between researchers, developers, engineers, students, and practitioners working all around the world. The conference will be organized every year making it an ideal platform for people to share views and experiences in energy, environment and materials science and related areas.

alcaligenes faecalis characteristics: The Prokaryotes M.P. Starr, H. Stolp, H.G. Trüper, A. Balows, H.G. Schlegel, 2013-11-11 The purpose ofthis brief Foreword is to make you, the reader, hungry for the scientific feast that follows. These two volumes on the prokary otes offer a truly unique scientific menu-a comprehensive assembly of articles, exhibiting the biochemical depth and remarkable physiological and morphological diversity of prokaryote life. The size of the volumes might initially discourage the unprepared mind from being attracted to the study of prokaryote life, for this landmark assemblage thoroughly documents the wealth of present knowledge. But in confronting the reader with the state of the art, the Handbook also defines where new work needs to be done on well-studied bacteria as well as on unusual or poorly studied organisms. There are basically two ways of doing research with microbes. A classical approach is first to define the phenomenon to be studied and then to select the organism accordingly. Another way is to choose a specific organism and go where it leads. The pursuit of an unusual microbe brings out the latent hunter in all of us. The intellectual chal lenges of the chase frequently test our ingenuity to the limit. Sometimes the quarry repeatedly escapes, but the final capture is indeed a wonder ful experience. For many of us, these simple rewards are sufficiently gratifying so that we have chosen to spend our scientific lives studying these unusual creatures.

alcaligenes faecalis characteristics: The Prokaryotes Stanley Falkow, Eugene Rosenberg, Karl-Heinz Schleifer, Erko Stackebrandt, 2006-10-12 The revised Third Edition of The Prokaryotes, acclaimed as a classic reference in the field, offers new and updated articles by experts from around the world on taxa of relevance to medicine, ecology and industry. Entries combine phylogenetic and systematic data with insights into genetics, physiology and application. Existing entries have been revised to incorporate rapid progress and technological innovation. The new edition improves on the lucid presentation, logical layout and abundance of illustrations that readers rely on, adding color illustration throughout. Expanded to seven volumes in its print form, the new edition adds a new, searchable online version.

alcaligenes faecalis characteristics: Nitrogen Fixation with Non-Legumes K.A. Malik, M. Sajjad Mirza, J.K. Ladha, 2012-12-06 Diazotrophic bacteria convert atmospheric nitrogen to plant-useable form and this input of nitrogen through biological fixation is of great agronomic importance. The contributions presented in this volume relate to free-living nitrogen fixers and the diazotrophs associated with plants. Symbiotic association of Frankia with non-legumes and

cyanobacterial associations are also discussed. Research topics covered in this volume include the biochemistry and genetics of diazotrophs, recent developments in improvement of plant-microbe interactions and their molecular basis, the use of molecular probes in taxonomy and ecology of diazotrophs and reports on field applications, agronomic importance and improvement in methodologies for assessing their contribution to plants. This book provides valuable information not only for researchers working in the field of biological nitrogen fixation but also for biochemistry, molecular biologists, microbiologists and agronomists.
