Sample Questions from the Gizmo Water Pollution Activity and Their Answers

Below are some typical questions from the Gizmo water pollution activity along with detailed answers, serving as a reference for the answer key.

Q1: What is the primary difference between point-source and non-point-source pollution?

Answer:

Point-source pollution originates from a single, identifiable source, such as a pipe or a factory discharge. Non-point-source pollution comes from multiple, diffuse sources like runoff from agricultural fields or urban

areas. The key difference lies in the ease of identifying the pollution source.

Q2: How does thermal pollution affect aquatic ecosystems?

Answer:

Thermal pollution occurs when water temperature rises due to human activities like industrial cooling processes. Elevated temperatures decrease oxygen levels in water, stressing or killing aquatic organisms, disrupting breeding patterns, and leading to reduced biodiversity.

Q3: Name three human activities that contribute to water pollution and briefly explain their impacts.

Answer:

- Industrial waste disposal: introduces toxic chemicals and heavy metals, contaminating water bodies.
- Agricultural runoff: carries pesticides and fertilizers, causing nutrient overload and algal blooms.
- Untreated sewage: introduces pathogens and organic matter, leading to waterborne diseases and oxygen depletion.

Q4: What are some effective strategies to reduce water pollution?

Answer:

- Implementing strict pollution regulations and enforcement
- Developing and maintaining wastewater treatment facilities
- Promoting sustainable agricultural practices like organic farming
- Restoring natural wetlands to filter pollutants
- Educating communities about pollution prevention
