hilton design standards: The Space of Sex Shelton Waldrep, 2021-05-20 As film and television become ever more focused on the pornographic gaze of the camera, the human body undergoes a metamorphosis, becoming both landscape and building, part of an architectonic design in which the erotics of the body spread beyond the body itself to influence the design of the film or televisual shot. The body becomes the mise-en-scène of contemporary moving imagery. Opening The Space of

Sex, Shelton Waldrep sets up some important tropes for the book: the movement between high and low art; the emphasis on the body, looking, and framing; the general intermedial and interdisciplinary methodology of the book as a whole. The Space of Sex's second half focuses on how sex, gender, and sexuality are represented in several recent films, including Paul Schrader's *The Canyons* (2013), Oliver Stone's *Savages* (2012), Steven Soderbergh's *Magic Mike* (2012), Lars Von Trier's *Nymphomaniac* (2013), and Joseph Gordon-Levitt's *Don Jon* (2013). Each of these mainstream or independent movies, and several more, are examined for the ways they have attempted to absorb pornography, if not the pornography industry specifically, into their plot. According to Waldrep, the utopian elements of seventies porn get reprocessed in a complex way in the twenty-first century as both a utopian impulse—the desire to have sex on the screen, to re-eroticize sex as something positive and lacking in shame—with a mixed feeling about pornography itself, with an industry that can be seen in a dystopian light. In other words, sex, in our contemporary world, still does not come without compromise.

hilton design standards: Historical Organization Studies Mairi Maclean, Stewart R. Clegg, Roy Suddaby, Charles Harvey, 2020-11-26 We are now entering a new phase in the establishment of historical organization studies as a distinctive methodological paradigm within the broad field of organization studies. This book serves both as a landmark in the development of the field and as a key reference tool for researchers and students. For two decades, organization theorists have emphasized the need for more and better research recognizing the importance of the past in shaping the present and future. By historicizing organizational research, the contexts and forces bearing upon organizations will be more fully recognized, and analyses of organizational dynamics improved. But how, precisely, might a traditionally empirically oriented discipline such as history be incorporated into a theoretically oriented discipline such as organization studies? This book evaluates the current state of play, advances it and identifies the possibilities the new emergent field offers for the future. In addition to providing an important work of reference on the subject for researchers, the book can be used to introduce management and organizational history to a student audience at both undergraduate and postgraduate levels. The book is a valuable source for wider reading, providing rich reference material in tutorials across organizational studies, or as recommended or required reading on courses with a connection to business or management history. hilton design standards: Modernism in Late-Mao China Ke Song, 2023-04-28 This book investigates the architectural history of China in the Mao era (1949–1976), focusing on the rise of modernism in the last seven years of the Cultural Revolution from 1969 to 1976. It highlights the new architecture of this period, exemplified by three clusters of buildings for foreign affairs, namely buildings for foreign diplomacy in Beijing, buildings for foreign trade in Guangzhou and China's foreign aid projects overseas. The emergence of new architecture in the early 1970s is closely associated with China's political and diplomatic shift of the time, from a radical emphasis on ideological struggle to a dynamic balance between leftist ideology and pragmatic concerns. In this context, China's relations with the West quickly improved, culminating with American president Richard Nixon's visit to China in 1972. The increasing foreign affairs brought new opportunities to Chinese architects who referenced both Western modernism and Chinese architectural traditions to create a new version of Chinese modernism. The book brings dimensions of form, politics and knowledge to the analysis of architecture, to construct an understanding of architectural design as an aesthetic, political and intellectual practice. *Modernism in Late-Mao China* will be an enriching and useful reference for students and scholars who are interested in the global architectural history of the twentieth century, especially Cold War modernism.
