manchus and han: Manchus and Han Edward J. M. Rhoads, 2015-08-03 Open-access edition: DOI 10.6069/9780295997483 China's 1911–12 Revolution, which overthrew a 2000-year succession of dynasties, is thought of primarily as a change in governmental style, from imperial to republican, traditional to modern. But given that the dynasty that was overthrown—the Qing—was that of a minority ethnic group that had ruled China's Han majority for nearly three centuries, and that the revolutionaries were overwhelmingly Han, to what extent was the revolution not only anti-monarchical, but also anti-Manchu? Edward Rhoads explores this provocative and complicated question in *Manchus and Han*, analyzing the evolution of the Manchus from a hereditary military caste (the “banner people”) to a distinct ethnic group and then detailing the interplay and dialogue between the Manchu court and Han reformers that culminated in the dramatic changes of the early 20th century. Until now, many scholars have assumed that the Manchus had been assimilated into Han culture long before the 1911 Revolution and were no longer separate and distinguishable. But Rhoads demonstrates that in many ways Manchus remained an alien, privileged, and distinct group. *Manchus and Han* is a pathbreaking study that will forever change the way historians of China view the events leading to the fall of the Qing dynasty. Likewise, it will clarify for ethnologists the unique origin of the Manchus as an occupational caste and their shifting relationship with the Han, from border people to rulers to ruled. It shows how Chinese political elites have competed to promote different types of nationalism linked to their political values and interests and imposed them on the nation while trying to repress other types of nationalism. In particular, the book reveals how leaders of the PRC have adopted a pragmatic strategy to use nationalism while struggling to prevent it from turning into a menace rather than a prop.

manchus and han: *China* Joseph W. Esherick, C.X. George Wei, 2013-12-17 The Qing dynasty was China's last, and it created an empire of unprecedented size and prosperity. However in 1911 the empire collapsed within a few short months, and China embarked on a revolutionary course that

lasted through most of the twentieth century. The 1911 Revolution ended two millennia of imperial rule and established the Republic of China, but dissatisfaction with the early republic fuelled further revolutionary movements, each intended to be more thoroughgoing than the last, from the National Revolution of the 1920s, to the Communist Revolution, and finally the Cultural Revolution. On the centenary of the 1911 Revolution, Chinese scholars debated the causes and significance of the empire's collapse, and this book presents twelve of the most important contributions. Rather than focusing on Sun Yat-sen's relatively weak and divided revolutionary movement, as much previous scholarship has, these studies examine the internal dynamics of political and socio-economic change in China. The chapters reveal how reforms in education, army organization, and constitutional rule created new social forces and political movements that undermined dynastic legitimacy within China and on its frontiers. Through detailed analyses, using new archival, memoir, diary, and newspaper sources, the authors cast new light on the sudden collapse of an empire that many thought was at last embarked on a road to reform and national rejuvenation. *China: How the Empire Fell* will be of huge interest to students and scholars of modern Chinese history as well as those of contemporary China.

manchus and han: The Making of the Modern Chinese State Huaiyin Li, 2019-08-13 *The Making of the Modern Chinese State: 1600-1950* offers an historical analysis of the formation of the modern Chinese state from the seventeenth century to the mid-twentieth centuries, providing refreshing and provocative interpretations on almost every major issue regarding the rise of modern China. This book explores the question of why today's China is unlike any other nation-state in size and structure. It inquires into the reasons behind the striking continuity in China's territorial and ethnic compositions over the past centuries, and explicates the genesis and tenacity of the Chinese state as a highly centralized and unified regime that has been able to survive into the twenty-first century. Its analysis centres on three key variables, namely geopolitical strategy, fiscal constitution, and identity building, and it demonstrates how they worked together to shape the outcome of state transformation in modern China. Enhanced by a selection of informative tables and illustrations, *The Making of the Modern Chinese State: 1600-1950* is ideal for undergraduates and graduates studying East Asian history, Chinese history, empires in Asia, and state formation.

In this landmark text, Huang Xingtao uses a cultural approach to the history of ideas. He traces the complex contours in the discursive debates around the concept of the Chinese nation (*Zhonghua minzu*) from its origins in the late Qing; through the pivotal moment of the 1911 Revolution; into the contentious revolutionary upheavals of the 1920s, amidst the national crisis brought on by Japanese invasions in the 1930s; and culminating in the widespread acceptance of the concept during the Civil War. By the late 1940s, the Chinese nation came to represent the idea that all peoples within the country, whatever their ethnicity, were equal citizens who shared common goals and aspirations.

manchus and han: Rereading Modern Chinese History Zhu Weizheng, 2015-04-21 *Rereading Modern Chinese History* is a collection of short essays on aspects of the history of the Qing dynasty, a regime dominated by Manchus that ruled China from 1644 to 1911. Using sources from that period and earlier it addresses key themes on the nature of Qing rule. These include the defeat by the British in the Opium Wars, the twin-track administration of Manchus and Han Chinese, the rise of Chinese military leaders in southern China, the purchase of office and endemic corruption, the challenge of the Taiping Heavenly Kingdom, and the failure of political reform. There are new insights on all the Qing emperors and the Empress Dowager Cixi, who ruled China between 1861 and 1908.

manchus and han: Ethnic China Xiaobing Li, Patrick Fuliang Shan, 2015-10-16 There are some serious concerns and critical questions about the on-going minority protesting in China, such as Tibetan monks' self-immolations, Muslims' suicide bombings, and Uyghur large-scale demonstrations. Why are minorities such as the Uyghur dissatisfied, when China is rising as a world power? What kind of struggle must they go through to maintain their identity, heritage, and rights? How does the government deal with this ethnic dissatisfaction and minority riots? And what is ethnic China's future in the 21st century? *Ethnic China* examines these issues from the perspective of Chinese-American scholars from fields such as economics, political science, criminal justice, law, anthropology, sociology, and education. The contributors introduce and explore the theory and practice of policy patterns, political systems, and social institutions by identifying key issues in Chinese government, society, and ethnic community contained within the larger framework of the international sphere. Their endeavors move beyond the existing scholarship and seek to spark new debates and proposed solutions while reflecting on established schools of history, religion, linguistics, and gender studies.

manchus and han: Bannermen Tales (Zidishu) Elena Suet-Ying Chiu, 2020-10-26 *Bannermen Tales* is the first book in English to offer a comprehensive study of zidishu (bannermen tales)—a popular storytelling genre created by the Manchus in early eighteenth-century Beijing. Contextualizing zidishu in Qing dynasty Beijing, this book examines both bilingual (Manchu-Chinese) and pure Chinese texts, recalls performance venues and features, and discusses their circulation and reception into the early twentieth century. With its original translations, musical score, and numerous illustrations of hand-copied and printed zidishu texts, this study opens a new window into Qing literature and provides a broader basis for evaluating the process of cultural hybridization. To go beyond readily available texts, author Elena Chiu engaged in intensive fieldwork and archival research, examining approximately four hundred hand-copied and printed zidishu texts housed in libraries in Mainland China, Taiwan, Germany, and Japan. Guided by theories of minority literature, cultural studies, and intertextuality, Chiu explores both the Han and Manchu cultures in the Qing dynasty through bannermen tales, and argues that they exemplified elements of Manchu cultural hybridization in the eighteenth and nineteenth centuries while simultaneously attempting to validate and perpetuate the superiority of Manchu identity. With its original translations, musical score, and numerous illustrations of hand-copied and printed zidishu texts, this study opens a new window into Qing literature and provides a broader basis for evaluating the process of cultural hybridization.

manchus and han: Reinventing Modern China Huaiyin Li, 2012-10-31 This work offers the first systematic analysis of writings on modern Chinese history by historians in China from the early twentieth century to the present. It traces the construction of major interpretive schemes, the evolution of dominant historical narratives, and the unfolding of debates on the most controversial issues in different periods. Placing history-writing in the context of political rivalry and ideological contestation, Huaiyin Li explicates how the historians' dedication to faithfully reconstructing the past was compromised by their commitment to an imagined trajectory of history that fit their present-day agenda and served their needs of political legitimation. Beginning with an examination of the contrasting narratives of revolution and modernization in the Republican period, the book scrutinizes changes in the revolutionary historiography after 1949, including its disciplinization in the 1950s and early 1960s and radicalization in the rest of the Mao era. It further investigates the rise of the modernization paradigm in the reform era, the crises of master narratives since the late 1990s, and the latest development of the field. Central to the author's analysis is the issue of truth and falsehood in historical representation. Li contends that both the revolutionary and modernization historiographies before 1949 reflected historians' lived experiences and contained a degree of authenticity in mirroring the historical processes of their own times. In sharp contrast, both the revolutionary historiography of the Maoist era and the modernization historiography of the reform era were primarily products of historians' ideological commitment, which distorted and concealed the past no less than revealed it. In search of a more effective approach to rewriting modern Chinese history, *Reinventing Modern China* proposes a within-time, open-ended perspective,

which allows for different directions in interpreting the events in modern China and views modern Chinese history as an unfinished process remaining to be defined as the country entered the twenty-first century.

It also examines China's modern and postmodern architecture, considered as derivative or lacking spiritual meaning or personality, and showcases how China's traditional culture underpins the emergence of China's modern cities. Focusing on the notion of "courtyard spirit" in China, it offers a study of the urban public squares central to Chinese society, and examines the disruption of the traditional Square model and the rise and growth of new architectural models.

manchus and han: Remote Homeland, Recovered Borderland Shao Dan, 2011-08-31 Remote Homeland, Recovered Borderland addresses a long-ignored issue in the existing studies of community construction: How does the past failure of an ethnic people to maintain sovereignty over their homeland influence their contemporary reconfigurations of ethnic and national identities? To answer this question, Shao Dan focuses on the Manchu, the second largest non-Han group in contemporary China, whose cultural and historical ancestors, the Manchus, ruled China from 1644 to 1912. Based on deep and rigorous empirical research, Shao analyzes the major forces responsible for the transformation of Manchu identity from the ruling group of the Qing empire to the minority of minorities in China today: the de-territorialization and provincialization of Manchuria in the late Qing, the remaking of national borders and ethnic boundaries during the Sino-Japanese contestation over Manchuria, and the power of the state to re-categorize borderland populations and ascribe ethnic identity in post-Qing republican states. Within the first half of the twentieth century, four regimes—the Qing empire under the Manchu royal clan, the Republic of China under the Nationalist Party, Manchukuo under the Japanese Kanto Army, and the People's Republic of China under the Communist Party—each grouped the Manchus into different ethnic and national categories while re-positioning Manchuria itself on their political maps in accordance with their differing definitions of statehood. During periods of state succession, Manchuria was transformed from the Manchu homeland in the Qing dynasty to an East Asian borderland in the early twentieth century, before becoming China's territory recovered from the Japanese empire. As the transformation of territoriality took place, the hard boundaries of the Manchu community were reconfigured, its ways of self-identification reformed, and the space for its identity representations redefined. Taking the borderland approach, Remote Homeland goes beyond the single-country focus and looks instead at regional and cross-border perspectives. It is a study of China, but one that transcends traditional historiographies. As such, it will be of interest to scholars of modern China, Japanese empire, and Northeast Asian history, as well as to those engaged in the study of borderlands, ethnic identity, nationalism, and imperialism.

manchus and han: Tibetan Buddhists in the Making of Modern China Gray Tuttle, 2005 Gray Tuttle reveals the surprising role Buddhism and Buddhist leaders played in the development of the modern Chinese state and in fostering relations between Tibet and China from the Republican period (1912-1949) to the early years of Communist rule. Tuttle offers new insights on the impact of modern ideas of nationalism, race, and religion in East Asia. He draws on previously unexamined archival and governmental materials, as well as personal memoirs of Chinese politicians and Buddhist monks, and ephemera from religious ceremonies.

manchus and han: The Human Tradition in Modern China Kenneth J. Hammond, Kristin Stapleton, 2008 Through compelling biographies of a wide range of historical figures, this engaging text presents a panorama of modern Chinese history that illustrates the great social and political

changes that have occurred over the past 500 years. Through the lives of both the famous and the obscure, the contributors explore such enduring themes of the flexibility of the definition of Chinese in an era of imperialism and revolution, the tremendous transformations in gender relations, and the wide gap between the lives of urban and rural Chinese. Richly researched, these biographies are written in an accessible and appealing style that will engage all readers interested in modern China.
