Understanding the Context of Lobotomy in Medical History

The Origins and Development of Lobotomy

Lobotomy, also known as leucotomy, was a pioneering (though now largely discredited) surgical procedure developed in the early 20th century aimed at alleviating severe mental illnesses such as schizophrenia, depression, and bipolar disorder. It involved severing connections in the brain's prefrontal cortex, with the goal of calming or controlling symptoms.

Key historical milestones:

- 1935: Portuguese neurologist Egas Moniz pioneers the procedure, earning him the Nobel Prize in Physiology or Medicine in 1949.
- 1940s-1950s: The procedure gains popularity in North America and Europe as a treatment for various psychiatric conditions.
- 1960s onward: Growing awareness of the serious side effects and ethical issues leads to the decline of lobotomy practices.

The Ethical and Medical Controversies

Lobotomy is now widely regarded as a controversial chapter in psychiatric history, raising questions about consent, autonomy, and the limits of medical intervention. Many patients suffered irreversible cognitive and emotional impairments, often with little understanding or consent.

Main ethical concerns include:

my lobotomy pdf: My Lobotomy Charles Fleming, Howard Dully, 2008-09-04 Howard Dully was 12 years old when he was given a lobotomy. He was 56 years old when he found out why. The four decades in between tell a story of profound love and compassion. In 1960 Howard's father and stepmother delivered him into the hands of the man who had invented the 'ice pick' lobotomy. Expelled from the mainstream medical community, his once-popular procedure now a grisly medical relic, Dr Walter Freeman was eager to turn this temperamental 12-year-old into a submissive boy - especially after hearing the terrible lies his stepmother told about him. Howard, told he was going into the hospital for tests, was instead given electro-shock treatments and a transorbital lobotomy. It took him 40 years to recover. Howard Dully's escape from that dark place is a voyage of enormous hope and universal appeal.

my lobotomy pdf: Disability Politics and Theory, Revised and Expanded Edition A.J. Withers, 2024-05-09T00:00:00Z Disability Politics and Theory, a historical exploration of the concept of disability, covers the late nineteenth century to the present, introducing the main models of disability theory and politics: eugenics, medicalization, rehabilitation, charity, rights and social and disability justice. A.J. Withers examines when, how and why new categories of disability are created and describes how capitalism benefits from and enforces disabled people's oppression. Critiquing the currently dominant social model of disability, this book offers an alternative. The radical framework Withers puts forward draws from schools of radical thought, particularly feminism and critical race theory, to emphasize the role of interlocking oppressions in the marginalization of disabled people and the importance of addressing disability both independently and in conjunction with other oppressions. Intertwining theoretical and historical analysis with personal experience, this book is a poignant portrayal of disabled people in Canada and the U.S. — and a call for social and economic justice. This revised and expanded edition includes a new chapter on the rehabilitation model, expands the discussion of eugenics, and adds the context of the growth of the disability justice movement, Black Lives Matter, calls for defunding the police, decolonial and Indigenous land protection struggles, and the COVID-19 pandemic.

my lobotomy pdf: Countering China's Great Game Michael Scott Sobolik, 2024-04-15 The United States is in the midst of a new cold war with the Chinese Communist Party (CCP), and America is losing. That claim, at the core of Michael Sobolik's new book Countering China's Great

Game: A Strategy for American Dominance, challenges the Washington, D.C. conventional wisdom about U.S.-China relations. Officials in Washington are reacting to the CCP and playing defense. Like America's efforts to contain the Soviet Union in the twentieth-century Cold War, the United States needs a strategic vision to overcome the CCP. Sobolik offers a plan for American victory over the CCP and presents a roadmap to sabotage the crux of the CCP's foreign policy: the Belt and Road Initiative (BRI). At its core, the BRI is not an economic venture. It is a geopolitical gambit. Chinese leader Xi Jinping's "project of the century" has entered its second phase: leveraging yesterday's investments for today's political and military ends. Xi will never do away with the BRI because it is strengthening Beijing's strategic position from Southeast Asia and the Pacific Islands to Africa and Latin America. The BRI is the apotheosis of the CCP's grand strategy. America needs a blueprint to take it down. Sobolik provides this blueprint by identifying the BRI's core weakness: imperial overstretch. After identifying China's penchant for empire-building, he identifies the BRI's key weaknesses globally and traces them back to the CCP's vulnerabilities at home. Sobolik's work offers policymakers a plan to go on the offense and win America's new cold war.

Nothing seems more real than the minds of other people. When you consider what your boss is thinking or whether your spouse is happy, you are admitting them into the mind club. It's easy to assume other humans can think and feel, but what about a cow, a computer, a corporation? What kinds of mind do they have? Daniel M. Wegner and Kurt Gray are award-winning psychologists who have discovered that minds—while incredibly important—are a matter of perception. Their research opens a trove of new findings, with insights into human behavior that are fascinating, frightening and funny. *The Mind Club* explains why we love some animals and eat others, why people debate the existence of God so intensely, how good people can be so cruel, and why robots make such poor lovers. By investigating the mind perception of extraordinary targets—animals, machines, comatose people, god—Wegner and Gray explain what it means to have a mind, and why it matters so much. Fusing cutting-edge research and personal anecdotes, *The Mind Club* explores the moral dimensions of mind perception with wit and compassion, revealing the surprisingly simple basis for what compels us to love and hate, to harm and to protect.

my lobotomy pdf: *The Perpetual Treadmill* Dean Whittington, 2014-09-11 *The Perpetual Treadmill* is a care pathway devised to ensnare the poor within a never ending treatment system for their own good, after they have been labelled with their designated malaise. Once caught within it, similar to Kafkas Trial and Castle, they are wedged within its corridors where they are forever signposted between services. This book draws on the analogies of knights and knaves by building on Bath of Steel to focus on how this system has been constructed and then maintained. To depict its shortcomings, it has been ranged against a psychologically informed perspective (PSIP) to show how those entrapped can eventually exit the perpetual treadmill. But there are numerous vested interests which militate against those clients, duly labelled from ever emotionally recovering. The interplay between politicians, bureaucrats, academics, practitioners and clients is explored to detail how the poor have become a raw material which feeds this machine. This book is relevant to psychotherapists, addiction specialists, psychologists, sociologists, criminologists, clinical psychologists, psychiatrists, social workers, social policy experts and nurses.

my lobotomy pdf: A History of Medicine in 50 Discoveries (History in 50) Marguerite Vigliani, Gale Eaton, Phillip Hoose, 2017-06-27 Vigliani and Eaton's high-interest exploration of medicine begins in prehistory. The 5,000-year-old Iceman discovered frozen in the Alps may have treated his gallstones, Lyme disease, and hardening of the arteries with the 61 tattoos that covered his body—most of which matched acupuncture points—and the walnut-sized pieces of fungus he carried on his belt. The herbal medicines chamomile and yarrow have been found on 50,000-year-old teeth, and neatly bored holes in prehistoric skulls show that Neolithic surgeons relieved pressure on the brain (or attempted to release evil spirits) at least 10,000 years ago. From Mesopotamian pharmaceuticals and Ancient Greek sleep therapy through midwifery, amputation, bloodletting, Renaissance anatomy, bubonic plague, and cholera to the discovery of germs, X-rays, DNA-based treatments and modern prosthetics, the history of medicine is a wild ride through the history of humankind.

my lobotomy pdf: Courageous Love Laura Montané Bailey, LMFT, 2013-08 Raising grandchildren can be challenging for many reasons. Often, the children have experienced complicated family dynamics, heartbreaking loss, abuse, and neglect - all of which may affect their emotions, behavior, and development. my lobotomy pdf: TV Lobotomy Michel Desmurget, 2023-07-04 • TV unleashes the

imagination and feeds intelligence. • A child deprived of TV risks social isolation. • TV dumbs you down. • TV makes you obese. It seems that everything—and its opposite—has already been said about TV. But what is it really? How can we distinguish between the radical No TV of some and the supposedly entertaining virtues touted by others? Michel Desmurget, a doctor in neuroscience, has sifted through and synthesized thousands of research articles published over the last fifty years in the most rigorous international journals. The conclusion is unequivocal—we must stop watching television for good, whatever the program. All content, even that meant to teach, can never come close to any other learning method. The data is clear—television viewing is detrimental to school performance. For a child in elementary school, for example, every hour spent daily watching television increases the likelihood that he or she will one day leave the school system without any qualifications. For specialists, there is no doubt that television has a negative influence, not only on intellectual development but also on behavior. Thus, certain eating disorders (anorexia, bulimia) are related to a frantic consumption of—television programs! In short, watching television has an impact on our life expectancy. However, the harmful impact of this risk is largely underestimated, because of the large sector of the public exposed to television (more than 85% of Western households have at least one television set), and because of a debate on the subject that has become inaudible and confused. Moreover, the results of the research initiated by the big media groups on the subject remain proprietary, i.e., closed to the general public. Believing that we are facing a real public health problem, Michel Desmurget wants to act as a responsible scientist—with a clear, concise and rigorously referenced book, the message cannot go unnoticed. Michel Desmurget is a doctor of neuropsychology. He attended several major American universities (MIT, Emory, UCSF) and is now a research director at INSERM in cognitive neuroscience. He is particularly interested in the problems of brain organization and plasticity. He is the author of the book *TV Lobotomy* (Max Milo, 2022), which is based in part on his personal history. Exasperated by having to constantly justify the choice not to have television at home—and to prevent his children from having access to it—and not to be seen as a sociopath in the eyes of those around him, he has done a massive job to argue his point.

my lobotomy pdf: Helping Children with Troubled Parents Margot Sunderland, Nicky Armstrong, 2017-04-28 This book is designed to enable practitioners to help children whose emotional wellbeing is being adversely affected by troubled parents. These are children who live with the burden of having to navigate their parent's troubled emotional states, often leaving them with a mass of painful feelings about a chaotic and disturbing world. They can feel alarmed by their parent rather than experiencing them as 'home', and a place of safety and solace. The author explores the fact that when parents are preoccupied with their own troubles, they are often unable to effectively address their child's core relational needs, e.g. soothing, validating, attunement, co-adventure, interactive play. As a result, children are left self-helping, which all too often means drugs, drink, self-harm, depression, anxiety, eating disorders or problems with anger in the teenage years. This guidebook offers readers a wealth of vital theory and effective interventions for working with these children and, specifically, the key feelings such children need help with. Particular focus is given to the effects on children of: family breakdown; separation and divorce; witnessing parents fighting; and parents who suffer from depression or anxiety, mental or physical ill-health, alcohol or drug addiction. Readers will learn: the complexity of children's feelings about their troubled parents; how to enable children to address their unspoken hurt, fear, grief, rage, and resentment about their troubled parent in order to move forward in their lives; how to empower children to find their voice when they have been left in the role of impotent bystander; effective parent-child intervention when parental troubles are adversely affecting the child; and how to help a parent and child 'find' each other again.

my lobotomy pdf: Women and the Politics of Representation in Southeast Asia Adeline Koh, Yu-Mei Balasingamchow, 2015-06-03 Singapore and Malaysia are rapidly modernising, globalising Asian states which, although being distinct nations since 1965, share common elements in the on-going struggle over the meaning of gender and sexuality in their societies. This is the first book to discuss a range of discourses around gender in these two countries. Women and the Politics of Representation in Southeast Asia: Engendering Discourse in Singapore and Malaysia seeks to give an overview of how gender and representation come together in various configurations in the history and contemporary culture of both nations. It examines the discursive construction of gender, sexuality and representation in a variety of areas, including the politics of everyday life, education, popular culture, literature, film, theatre and photography. Chapters examine a range of tropes such as the Orientalist Sarong Party Girl, the iconic Singapore Girl of Singapore Airlines, and the figure of pious Muslim femininity celebrated by Malaysian NGO IMAN, all of which play important roles in delineating limitations for gender roles. The collection also draws attention to resistance to these gender boundaries in theatre, film, blogs and social media, and pedagogy. Bringing together research from a variety of humanistic and social science fields, such as film, material culture, semiotics, literature and pedagogy, the book is a comprehensive feminist survey that will be of use for students and scholars of Women’s Studies and Asian Studies, as well as on courses on gender, media and popular culture in Asia.

my lobotomy pdf: Recoding America Jennifer Pahlka, 2023-06-13 Named one of NPR's Best Books of 2023 Named one of Ezra Klein's Books That Explain Where We Are in 2023, The New York Times Learn more about Jennifer Pahlka's work at recodingamerica.us. “The book I wish every policymaker would read.” —Ezra Klein, The New York Times A bold call to reexamine how our

government operates—and sometimes fails to—from President Obama’s former deputy chief technology officer and the founder of Code for America. Just when we most need our government to work—to decarbonize our infrastructure and economy, to help the vulnerable through a pandemic, to defend ourselves against global threats—it is faltering. Government at all levels has limped into the digital age, offering online services that can feel even more cumbersome than the paperwork that preceded them and widening the gap between the policy outcomes we intend and what we get. But it’s not more money or more tech we need. Government is hamstrung by a rigid, industrial-era culture, in which elites dictate policy from on high, disconnected from and too often disdainful of the details of implementation. Lofty goals morph unrecognizably as they cascade through a complex hierarchy. But there is an approach taking hold that keeps pace with today’s world and reclaims government for the people it is supposed to serve. Jennifer Pahlka shows why we must stop trying to move the government we have today onto new technology and instead consider what it would mean to truly recode American government.

my lobotomy pdf: Feuer im Kopf Susannah Cahalan, 2013-08-09 Susannah Cahalan ist jung, attraktiv, frisch verliebt, eine aufstrebende Journalistin – und gerät über Nacht in den schlimmsten Albtraum ihres Lebens. Innerhalb kürzester Zeit erkrankt sie schwer, leidet an Wahnvorstellungen und wird binnen weniger Wochen zum Schwerstpflegefall in der Psychiatrie. Vollgepumpt mit Medikamenten wird sie ans Bett gefesselt und vegetiert vor sich hin – dem Tod näher als dem Leben. Doch ihre Familie gibt nicht auf bis endlich der renommierte Neurologe Souhel Najjar hinzugezogen wird. Er findet heraus, dass Susannah an einer erst vor kurzem entdeckten Autoimmunerkrankung leidet, in deren Verlauf der Körper das eigene Gehirn angreift und Symptome wie Schizophrenie, Autismus und Wahnvorstellungen erzeugt. Einmal richtig diagnostiziert, sorgen die geeigneten Medikamente rasch und dauerhaft für Genesung und Susannah gewinnt ihr Leben zurück. Ihre Schilderung des Leidensweges ist eine bewegende und aufregende Geschichte über Familie, Liebe, Hoffnung und darüber, wie sich ein perfektes Leben innerhalb kürzester Zeit in eine Katastrophe verwandeln kann. Ein fesselndes Buch, das man nicht aus der Hand legen kann, bis die letzte Seite verschlungen ist.
