- ISO: Sensitivity to light. Lower ISO (100-400) for bright conditions; higher ISO (800+) for low light.
- Shutter Speed: Controls motion blur. Faster speeds (1/500s or higher) freeze motion; slower speeds (1/30s or lower) create motion blur.

Recommended Settings for Common Scenarios

Scenario	ISO	Shutter Speed	Aperture	Notes
Bright daylight	100	1/1000s	f/8	Minimize noise, sharp images
Indoor/low light	800-1600	1/60s or slower	f/2.8-f/4	Increase ISO or use wider aperture
Portraits	100-400	1/100s-1/200s	f/1.8-f/2.8	Blur background, focus on subject
Action/Moving subjects	400-800	1/500s or faster	f/3.5-f/5.6	Freeze motion

3. Autofocus and Shooting Tips

Autofocus Modes

- One-Shot AF: Still subjects; locks focus when shutter is half-pressed.
- AI Servo AF: Moving subjects; continuous focus adjustment.
- AI Focus AF: Switches between One-Shot and Servo automatically.

Tip: For static scenes, One-Shot is reliable; for moving subjects, switch to

AI Servo.

Focus Points

- Use the manual selection of focus points for precise control.
- Central focus point is usually the most accurate; switch to peripheral points for composition flexibility.

4. Using the LCD Screen and Viewfinder

The Rebel T7 offers both optical viewfinder and live view modes. Familiarity with both enhances versatility.

- Viewfinder: Ideal for bright sunlight; preserves battery.
- Live View: Useful for framing, especially with tripod shots or video.

Tip: Use the LCD screen's touch controls and menu for quick adjustments when shooting in live view.

5. White Balance and Picture Styles

White Balance (WB)

Adjust WB to match lighting conditions:

- Auto WB: Most situations.
- Daylight/Sunny: Clear skies.
- Cloudy: Overcast conditions.
- Tungsten: Indoor incandescent.
- Fluorescent: Fluorescent lighting.
- Custom WB: Manually set using a white/gray card.

Picture Styles

- Standard: Default, vibrant colors.
- Portrait: Softer skin tones.
- Landscape: Rich greens and blues.
- Neutral/Monochrome: For editing.

Tip: Use Picture Styles to set the mood; shoot in RAW for maximum editing flexibility.

6. Shooting Tips for Different Photography Genres

Portrait Photography

- Use wide apertures (f/1.8-f/2.8) to blur backgrounds.
- Focus on the eyes.
- Use natural light or softboxes for softer skin tones.

Landscape Photography

- Use small apertures (f/8-f/16) for depth of field.

- Incorporate foreground interest.

Night Photography

- Use tripod.
- Set ISO to 800–1600.
- Use long exposures (1-30 seconds).
- Use remote shutter or timer to avoid shake.

7. Post-Processing Tips

While a cheat sheet focuses on camera settings, post-processing maximizes image quality.

- Use software like Lightroom or Photoshop.

8. Maintenance and Storage

Proper care extends your camera's lifespan.
