jumpmaster study guide: Headhunter Peter C. Svoboda, 2021-10-01 An Army squadron of paratroopers share the story of their fifteen-month deployment in Iraq in 2006. Selected in 2005 by the Army to be the first airborne reconnaissance squadron, 5th Squadron, 73rd Cavalry Regiment, better known as 5-73 CAV, was formed from 3rd Battalion, 505th Parachute Infantry Regiment. The members of the squadron were hand-selected by the squadron command team, Lieutenant Colonel Poppas and Command Sergeant Major Edgar. With just more than 400 paratroopers, they were half the size of a full-strength battalion and the smallest unit in the Panther Brigade. The squadron deployed to eastern Diyala in August, 2006. Despite their size, they were tasked with an enormous mission and were given the largest area of operations within the brigade. Appropriately for a unit known by the call sign of its CO—Headhunter—5-73 would go on to pursue various terrorist factions including Al Qaeda in Iraq. They got results, and 5-73 was awarded the Presidential Unit Citation for launching the Turki Bowl campaign from November 2006 to January 2007 against insurgent groups in Diyala Province. However the toll would be heavy—the squadron lost twenty-two paratroopers during the deployment. Headhunter is a unique account of the War on Terror. It's a soldier's story, told by those very paratroopers who gallantly fought to tame Diyala. Based on dozens of interviews conducted by the author, the narrative describes the danger of combat, the loss of comrades and the struggles of returning from a deployment. The voice of the families left behind are also included, describing the challenges they faced, including the ultimate challenge—grappling with the death of a loved one. This book explores the human dimensions of loss and struggle and illustrates the sacrifices our service members and their loved ones make. Finalist, 2020 Army Historical Foundation Distinguished Writing Awards Praise for Headhunter A gut punch that pulls out the raw

emotion of combat and the feelings of losing those closest to you. If one is unfamiliar with war, Headhunter will shock the senses. — ARMY Magazine A highly interesting and detailed account. — Journal of Counterterrorism & Homeland Security International

jumpmaster study guide: *A Prototype Windflow Modeling System for Tactical Weather Support Operations* John M. Lanicci, 1987 This report documents the culmination of a three-year development and testing effort on a two-dimensional (x-y plane) surface-layer windflow model for complex terrain. The model was acquired from the U.S. Army Atmospheric Sciences Laboratory (ASL) at White Sands, New Mexico in 1984. The version of the model described in this report has been adapted to run using real time data on both the Zenith-100 and IBM-compatible Zenith-248 computers. The model accepts input of a single surface observation (or forecast) of wind, temperature, and cloud cover, and uses this information along with terrain information and the date/time to diagnose the surface-layer stability. The model then performs a variational analysis of the windfield, adjusting the winds through a relaxation technique until the windfield conforms to effects of topography, stability, ambient flow conditions, and mass continuity. The model is designed to produce high-resolution wind analyses, typically running on domains on the order of 10 X 10 km, with horizontal grid spacing of 100 to 200 m. We present an overview of potential military and nonmilitary uses for the model, and describe the relevant physics and computer architecture of the model and its two utility plotting routines. A user's guide, included here as Section 4, is primarily aimed at providing operational users such as forecasters some guidelines for using the model and interpreting the output. Finally, we present the results of an operational test of the model in support of Army Special Forces operations at Ft. Devens, Massachusetts. The test results illustrate the model's potential as a tactical weather support tool for low-level aviation and paradrop activities.
