korean listening practice: Rhythm, Play and Interaction Design Brigid M. Costello, 2018-04-03

There are rhythms of action and response to all human-computer interactions. As we click, swipe, tap and sway to their beats, these rhythms intersect with the rhythms of our everyday lives. Perhaps they synchronize, perhaps they disrupt each other or maybe they dance together. Whatever their impact our experience of these rhythms will colour our experience of an interaction design. In playful interactive applications, rhythm is especially crucial because of the role it performs in building and maintaining the precarious spirit of play. Play involves movement and this movement has a rhythm that drives the experience. But what is the character of these rhythms of play and how can they be used in the design of interactive applications? These questions are the focus of this book. Drawing on traditions of rhythmic design practice in dance, performance, music and architecture, this book reveals key insights into practical strategies for designing playful rhythmic experience. With playful experiences now being incorporated into almost every type of computer application, interaction design practitioners and researchers need to develop a deeper understanding of the specific character of rhythms within play. Written from a designer's perspective, with interviews from leading creative artists and interaction design practitioners, *Rhythm, Play and Interaction Design* will help practitioners, researchers and students understand, evaluate and create rhythmic experiences.

korean listening practice: *Acoustics of Empire* Peter L. McMurray, Priyasha Mukhopadhyay, 2024 Music and sound studies have increasingly turned their attention to questions of empire and postcolonial thought in recent years, raising new questions about the forms and circulation of cultural, technological, political, and military power as manifest in and through sound. However, most of this scholarship has focused on the twentieth and twenty-first centuries. Conversely, sound and media studies have made nineteenth-century histories of science and technology a central part of their canonical repertoire, but largely overlooked the ways in which these technological developments emerged from contexts of empire. *Acoustics of Empire* provides a cultural history of global acoustics in the Age of Empire. Examining histories of sound, listening practices, and audiovisual technologies of the long nineteenth century through the lens of geopolitical power, the authors recover a sonic history that is irrefutably entangled with questions of imperial power and colonial rule. This volume brings together historians, musicologists, anthropologists, and literary scholars to consider topics ranging from Indian music treatises and vocal practices in Brazil to Egyptian traffic noises and stethoscopes-as-props in South Africa. Across its chapters more broadly, it also draws attention to a period when Euro-American academic disciplines like musicology and linguistics were created, shaped by the imperial contexts in which they emerged. These intertwined legacies of sound and power are not simply historical curiosities; rather, they stand as formative influences in cultural modernity and its discontents that continue to shape the ways we hear and experience the world today.

The book presents, and provides practice in, spoken Korean gambits that will help speakers organise their conversations and frame the type of extended discourse that is common in spoken Korean. The book introduces students to strategies for getting thinking time, dealing with breakdowns in comprehension, asking for and providing clarification, exemplifying, floor-holding, interrupting, checking understanding, disagreeing, reformulating and organising longer stretches of discourse; for example, when giving presentations, telling stories or providing self-introductions. *Korean Conversation Gambits: Developing Spoken Language* comes complete with classroom-ready practice materials. Using the transnational Korean context as a case in point, the authors analyse how the practices and ideologies of the English language reflect the complex and unexpected flows of globalisation. Examining topics such as the spoken English of South Korean youth and English education in North Korea, this interdisciplinary work gathers both established and emerging scholars from a range of language-related fields to evaluate English as a dynamic and evolving language beyond purely 'English-speaking' countries. This edited collection will be a valuable resource for students and scholars of world Englishes, multilingualism, second language acquisition and globalisation.

korean listening practice: Design Solutions for Adaptive Hypermedia Listening Software Turel, Vehbi, 2021-06-18 Adaptive hypermedia listening software enables materials writers to combine and deliver a wide range of digital elements on the same digital computer platform more efficiently. Such a combination and delivery provides a multidimensional, multi-sensory digital environment in which rich, efficient, instant, comprehensible, optimum, and meaningful input and feedback can be presented effectively and efficiently. Moreover, language learners' attention can be drawn to forms and meanings in input. Such aspects correspond with different theories and hypotheses of language learning and teaching. This presents users/learners with an environment that is easy to use, tension-free, and optimal during self-study. However, to be able to design and develop cost effective and professional adaptive hypermedia listening software, there are certain scientific educational findings and implications that need to be implemented at every single stage. To have access to such vital findings is not so easy, and research must address this area. Design Solutions for Adaptive Hypermedia Listening Software explores how to design and create technically and pedagogically sound and efficient interactive adaptive hypermedia listening software for language learners in any language. The chapters will cover learner strategy tools, the effectiveness of this technology, best practices in adaptive hypermedia listening software, and the benefits and challenges of this technology for language learning. It is ideal for companies, institutions, teachers,

policymakers, academicians, researchers, advanced-level students, technology developers, and decision-making pertinent government officials interested in designing and developing multimedia listening environments for language learners.

korean listening practice: Pronunciation Myths Linda Grant, Donna Brinton, 2014-02-21 This volume was conceived as a best practices resource for pronunciation and speaking teachers in the way that Vocabulary Myths by Keith S. Folse is one for reading and vocabulary teachers. Like others in the Myths series, this book combines research with good pedagogical practices. The book opens with a Prologue by Linda Grant (author of the Well Said textbook series), which reviews the last four decades of pronunciation teaching, the differences between accent and intelligibility, the rudiments of the English sound system, and other factors related to the ways that pronunciation is learned and taught. The myths challenged in this book are: § Once you've been speaking a second language for years, it's too late to change your pronunciation. (Derwing and Munro) § Pronunciation instruction is not appropriate for beginning-level learners. (Zielinski and Yates) § Pronunciation teaching has to establish in the minds of language learners a set of distinct consonant and vowel sounds. (Field) § Intonation is hard to teach. (Gilbert) § Students would make better progress if they just practiced more. (Grant) § Accent reduction and pronunciation instruction are the same thing. (Thomson) § Teacher training programs provide adequate preparation in how to teach pronunciation (Murphy). The book concludes with an Epilogue by Donna M. Brinton, who synthesizes some of the best practices explored in the volume.
