Ainu was not a written language, but it possesses a huge documented stock of oral literature, yet is significantly under-described in terms of grammar. It is the only non-Japonic language of Japan and is typologically different not only from Japanese but also from other Northeast Asian languages. Revolving around but not confined to its head-marking and polysynthetic character, Ainu manifests many typologically interesting phenomena, related in particular to the combinability of various voice markers and noun incorporation. Other interesting features of Ainu include vowel co-occurrence restrictions, a mixed system of expressing grammatical relations, which includes the elements of a rare tripartite alignment, nominal classification distinguishing common and locative nouns, elaborate possessive classes, verbal number, a rich four-term evidential system, and undergrammaticalized aspect, which are all explained in the volume. This handbook, the result of unprecedented cooperation of the leading experts of Ainu, will definitely help to increase the clarity of our understanding of Ainu and in a long-term perspective may provide answers to problems of human prehistory as well as open the field of Ainu studies to the world and attract many new students. kuta calculus: Visual Perception: Theory and Practice Terry Caelli, 2014-05-09 Visual Perception: Theory and Practice focuses on the theory and practice of visual perception, with emphasis on technologies used in vision research and in visual information processing. Central areas of vision research including spatial vision, motion perception, and color are discussed. Light and optics, convolutions and Fourier methods, and network theory and systems are also examined. Comprised of nine chapters, this book begins with an overview of language and processes underlying specific areas of vision such as measures of neural activity, feature specificity, and individual cells and psychophysics. The reader is then systematically introduced to the more essential properties of light and optics relevant to visual perception; the use of convolutions, Fourier series, and Fourier transform to model processes in visual perception; and network theory and systems. Subsequent chapters deal with the geometry of visual perception; spatial vision; the perception of motion; and some specific issues in visual perception, including color perception, binocular vision, and stereopsis. This monograph is intended for students, practitioners, and investigators in physiology.

kuta calculus: Tourism, Development and Terrorism in Bali Michael Hitchcock, 2023-01-06 This book investigates tourism as a form of globalization within the context of the island of Bali, which has been voted the world's top island destination for the third time running by American travellers. The volume covers the onset of the Asian Crisis, the largest stock-market crash since the Great Depression. The authors chart the turbulence that has afflicted the island at a time of market uncertainty and global political strife and analyze the responses of Bali's business and community leaders to the crises that have buffeted the island since the fall of Suharto. In particular, the book analyzes crisis management with regard to the Bali Bombings, the impact of the bombings on the tourism development cycle and investigates the motives of the bombers. The authors argue that the actions of the bombers can best be understood with regard to the rise of political Islam as a global issue and the book breaks new ground with an analysis of the bombers' global experiences. The book also examines home-grown resistance to certain aspects of globalization, notably the attempt to turn Besakih, the island's mother temple, into a World Heritage Site and top tourist destination.

kuta calculus: Peace Not War: Traditions of Restorative Justice in Imperial Ethiopia, 1769 - 1960 Charles Schaefer, 2025-05-27 Examines one of the few documented early examples of restorative justice from Africa or Latin America. With a writing system, Ethiopian emperors as well as pretenders to the throne chronicled their exploits including peace-building feats, and this book showcases and analyses historically verified instances, from as early as 1769, where restorative

justice modalities were used to resolve conflict and bring peace to the country. Peace not War traces Ethiopia's evolving understanding of restorative justice from the 'forgive and forget' approach which characterized the Zemene Mesafint (Era of the Princes), where perpetrators were exonerated, allowing them to recoup and build their armies to fight another day, to conditional forgiveness, recorded by the imperial court and dependent on atonement. Ethiopia's long history of experimentation with different forms of restorative justice demonstrates ingenuity, flexibility, and adaptability, but as the twentieth century progressed, workable, indigenous forms of restorative justice were sidelined by Western codified law that emphasized retribution.
