uwc ac: Open Learning as a Means of Advancing Social Justice Tabisa Mayisela, Shanali Govender, 2024-01-23 This volume investigates the uptake of 'open learning' in South African Technical Vocational Education and Training (TVET) colleges and higher education institutions.

Comprised of 16 studies focused on activities at a range of colleges and universities across the country, these chapters aim to promote a better understanding of open learning practices across the Post- School Education and Training (PSET) sector, including issues such as: recognition of prior learning, access for students with disabilities, work integrated learning, professional development, novel student funding mechanisms, leadership for open educational practices, institutional culture, student support, blended and online learning, flexible learning, online assessment, open educational resource development models and funding, and micro- credentials. This collection of peer-reviewed chapters contributes to understanding the ways in which South African PSET institutions and educators are interpreting 'open learning' as a means of advancing social justice. It includes a historical and contemporary understanding of the economic, cultural and political obstacles facing PSET, drawing on Nancy Fraser's theory of social justice as 'participatory parity' to better understand the ways in which 'open learning' may address systemic social injustices in order to allow South African students and educators to thrive. This volume emerges from research conducted by the Cases on Open Learning (COOL) project, an initiative by the Department of Higher Education and Training in partnership with the Centre for Innovation in Learning and Teaching (CILT) at the University of Cape Town (UCT) in South Africa.

uwc ac: Corruption Proofing in Africa Dan Kuwali, 2024-03-11 This book outlines evidence-based and data-driven strategies for combating grand corruption in Africa. Although the causes of corruption vary from country to country, this book suggests that corruption in Africa is often a direct consequence of poorly conceived legislation, policies, and institutional loopholes. The authors in this solution-oriented book converge in arguing that effective strategies to combat corruption (corruption proofing) should integrate an independent enforcement system, vigilant civil society, vibrant media, and political leadership. Utilising empirical evidence and a systems thinking approach, the contributors also uncover root causes of corruption and identify high-leverage interventions to prevent abuse of entrusted power for personal gain. The book recommends an integrated proactive strategy that includes top-down, bottom-up, and multi-stakeholder approaches in the implementation of anti-corruption legislation and policies. Bringing together multidisciplinary

and transdisciplinary research, the chapters in this volume include case studies from selected countries on the continent, including Cameroon, Kenya, Malawi, Namibia, Uganda, and Zimbabwe. Providing readers with a range of effective and functional initiatives in combating corruption in Africa, this book will be of interest to students and researchers of corruption, governance, ethics, peace and security, development, and African studies, as well as policymakers, practitioners, development partners, among other stakeholders.

uwc ac: European Traditions in the Study of Religion in Africa Ulrich Berner, Christoph Boechinger, 2004 This volume comprises case studies of five centuries of European encounters with and imaginations of Africa encompassing her triple religious heritage: African Traditional Religions, Christianity and Islam. The introductory chapters outline the challenges and present overviews; some of them also analyze the early accounts of European travelers and missionaries. The following contributions examine the lasting legacy of the European Enlightenment in employing an ambivalent language of human equality and universalism, while in actual fact consigning Africa to an inferior position. It has been difficult for western scholars to divorce themselves wholly from the perceptions thus established. However, there have been quite different approaches. This is indicated in the papers discussing the role and impact of influential European academics (scholars of religion, theologians, historians and social scientists) during the colonial and postcolonial period. Other contributions examine specific institutional centers of African religious studies in Europe. The concluding chapters critically assess European approaches and their use for the study of religion in Africa from an African perspective.

uwc ac: Decolonisation after Democracy Laurence Piper, 2020-05-21 Decolonisation after Democracy addresses the provocative idea that we need to rid higher education of lingering forms of colonial knowledge. This matters because in the colonial era much knowledge was put to the service of subjugating indigenous peoples, and the assumptions from this era may linger into the present. Examples of deep-rooted and 'foundational' forms of knowledge that carry colonial traits are normative binaries such as 'civilised and backward', 'modern and traditional' and 'rational and superstitious'. In addition, some accounts of positive values like freedom, equality, justice and democracy may hide the assumption that the western experience is the norm, from which other kinds are rendered imitations, deviations or pathologies. In this collection, some of South Africa's leading political scientists and academics engage with the challenge of decolonising knowledge in the research and teaching of politics. It includes new insights about the state, international relations, clientelism, statesociety relations and land reform; and introduces new ways to engage the colonial library, curriculum reform, and the marginality of historically black institutions. Finally, the contributors deal with the decolonial challenge posed by the #FeesMustFall student movements, reflecting on issues of revolutionary politics and gender and sexual violence. This book was originally published as a special issue of *Politikon*.

uwc ac: Future-proofing STEAME education in South Africa Rajendran Govender, Josef de Beer, Rouaan Maarman, Rajendra Chetty, 2025-02-28 This book aims to contribute to the discourse of finding innovative solutions to the myriad of challenges facing science education in South Africa. The book positions itself in the multi-disciplinary focus on Science, Technology, Engineering, Arts, Mathematics and Entrepreneurship (STEAME) education, rather than the traditional narrow focus on Science, Technology, Engineering and Mathematics (STEM). The chapters in the book explore the challenges and opportunities facing STEAME education in a complex 21st century and at the advent of a society with a strong artificial intelligence component in its DNA. The leitmotif of the book is how engaging pedagogies could be utilised in the classroom to enhance self-directed learning – a sine qua non to future-proof South Africa's science and technological advancement. This is a book written by scholars for scholars. Its target audience includes academics and researchers in the field of science education and scholars engaged with innovative teaching pedagogies, particularly approaches that would enhance the achievement of learners in disadvantaged contexts. The chapters in the book, although eclectic in approach, all contribute to the central theme of the book. Most of the chapters lean on textual analyses, literature reviews or concept papers which disclose new ideas before full validation.

With contributions by upcoming scientists, this scholarly book provides a synopsis of socio-ecological-economic views on the impact of COVID-19. Through its chapters, the book takes a

multi-disciplinary approach to reflecting on what it was like to be a scientist during the COVID-19 pandemic. By doing so, each chapter re-imagines science from the viewpoint of its discipline, offering insights from the perspective of young scientists that could benefit other scholars, academics and policymakers.

uwc ac: Some Developments in Research in Science and Mathematics in Sub-Saharan Africa Lorna Holtman, 2008 Much attention in late-developing countries is given to providing access to studies which allow school leavers to enter science and technology-related careers. These programmes are driven by the belief that graduates will then substantially contribute to the developmental needs of their countries. But is providing access to institutions enough? Students in developing countries often come from school environments lacking in resources - human, physical and financial. This book, in a number of chapters, reviews research related to the crucial dimension of epistemological access to the disciplines of import, which students need as much as institutional access in order to improve their chances of success. A significant feature of this collection's research studies is that their empirical bases are highly localised, covering areas such as: research methods; access; curriculum, instruction and assessment; and the relevance of science and mathematics education in Zimbabwe, Uganda, Swaziland, South Africa, Namibia, Malawi, Ghana and Lesotho. This volume provides invaluable insights and will be of relevance to researchers, policy makers and lecturers interested in these research outcomes in Sub-Saharan Africa. It is the outcome of a doctoral research capacity-development project, the Graduate Studies in Science, Mathematics and Technology Education (GRASSMATE).
