wgu objective assessments: Handbook of Research on Student-Centered Strategies in Online

Adult Learning Environments Fitzgerald, Carlton J., Laurian-Fitzgerald, Simona, Popa, Carmen, 2018-06-08 As traditional classroom settings are transitioning to online environments, teachers now face the challenge of using this medium to promote effective learning strategies, especially when teaching older age groups. Because adult learners bring a different set of understandings and skills to education than younger students, such as more job and life experiences, the one-size-fits-all approach to teaching does not work, thus pushing educators to create a student-centered approach for each learner. The Handbook of Research on Student-Centered Strategies in Online Adult Learning Environments is an important resource providing readers with multiple perspectives to approach issues often associated with adult learners in an online environment. This publication highlights current research on topics including, but not limited to, online competency-based education, nontraditional adult learners, virtual classrooms in public universities, and teacher training for online education. This book is a vital reference for online trainers, adult educators, university administrators, researchers, and other academic professionals looking for emerging information on utilizing online classrooms and environments in student-centered adult education.

Simpson, 2017-11-02 Historically, nursing, in all of its missions of research/scholarship, education and practice, has not had access to large patient databases. Nursing consequently adopted qualitative methodologies with small sample sizes, clinical trials and lab research. Historically, large data methods were limited to traditional biostatistical analyses. In the United States, large payer data has been amassed and structures/organizations have been created to welcome scientists to explore these large data to advance knowledge discovery. Health systems electronic health records (EHRs) have now matured to generate massive databases with longitudinal trending. This text reflects how the learning health system infrastructure is maturing, and being advanced by health information exchanges (HIEs) with multiple organizations blending their data, or enabling distributed computing. It educates the readers on the evolution of knowledge discovery methods that span qualitative as well as quantitative data mining, including the expanse of data visualization capacities, are enabling sophisticated discovery. wgu objective assessments: The College Devaluation Crisis Jason Wingard, 2022-08-02
Employers are stepping in to innovate new approaches to training talent that increasingly operates independently of the higher education sector. The value proposition of the college degree, long the most guaranteed route to professional preparation for work, is no longer keeping pace with rapidly evolving skill needs that derive from technological advancements impacting today's work force. If the university system does not engage in responsive restructuring, more and more workplaces will bypass them entirely and, instead, identify alternative sources of training that equip learners with competencies to directly meet dynamic needs. The College Devaluation Crisis makes the case that employers and other learning and development entities are emerging to innovate new approaches to training talent that, at times, relies on the higher education sector, but increasingly operates independently in order to satisfy talent needs more agilely and effectively. Written primarily for managers, the book focuses on case studies from leading companies, including Google, Ernst & Young, and General Assembly, to illustrate their innovative strategies for talent development across varying levels of individual education, age, and background. The book also addresses professionals on the university side, urging readers to consider the question: Will higher education pivot and adapt, or will it resist change and, therefore, be replaced?

wgu objective assessments: *Credentials* Michelle Van Noy, Paul L. Gaston, 2023-07-03 The credentials environment grows more complicated by the day, but key questions help us understand why we need this book to help us grapple with those complexities: • Given the expansion in the variety of higher education credentials and in approaches to earning them, why are so many students disappointed with their post-secondary credentials? • Despite the proliferation of credentials tailored to specific careers, why do so many employers complain that the preparation of their new hires is inadequate? • Despite their investment in new programs meant to attract new enrollees, why are so many colleges and universities facing issues with student persistence, timely credential completion, and career success? The plan of the book reflects the authors' practical aim. In the first of three parts, they offer a broad view of the credentials environment—how credentials work, how a proliferation in credentials has created an unprecedented array of educational choices, and why this abundance is a mixed blessing. In the second part, they focus on categories of credentials, from the associate degree to doctoral degrees to non-degree credentials. The book concludes with two chapters that consider the implications of the information the authors provide for leadership in volatile times: one discusses the importance of maintaining a priority on equity; the other offers 12 propositions for action. To help make the book useful, each chapter begins with a paragraph that summarizes the emphases to follow, and ends with a list of initiatives, i.e., “takeaways,” that leaders (and those attentive to what leaders are doing) should consider.
