gsmweb: Social Sensing and Big Data Computing for Disaster Management Zhenlong Li, Qunying Huang, Christopher T. Emrich, 2020-12-17 *Social Sensing and Big Data Computing for Disaster Management* captures recent advancements in leveraging social sensing and big data computing for supporting disaster management. Specifically, analysed within this book are some of the promises and pitfalls of social sensing data for disaster relevant information extraction, impact area assessment, population mapping, occurrence patterns, geographical disparities in social media use, and inclusion in larger decision support systems. Traditional data collection methods such as remote sensing and field surveying often fail to offer timely information during or immediately following disaster events. Social sensing enables all citizens to become part of a large sensor network which is low cost, more comprehensive, and always broadcasting situational awareness information. However, data collected with social sensing is often massive, heterogeneous, noisy, and unreliable in some aspects. It comes in continuous streams, and often lacks geospatial reference information. Together, these issues represent a grand challenge toward fully leveraging social sensing for emergency management decision making under extreme duress. Meanwhile, big data computing methods and technologies such as high-performance computing, deep learning, and multi-source data fusion become critical components of using social sensing to understand the impact of and response to the disaster events in a timely fashion. This book was originally published as a special issue of the *International Journal of Digital Earth*.

gsmweb: Leveraging Corporate Responsibility C. B. Bhattacharya, Sankar Sen, Daniel Korschun, 2011-09-15 The corporate social and environmental responsibility movement, known more generally as corporate responsibility (CR), shows little sign of waning. simultaneously improve societal welfare and corporate performance, most companies are largely in the dark when it comes to understanding how their stakeholders think and feel about these programs. This book argues that all companies must understand how and why stakeholders react to such information about companies and their actions. It examines the two most important stakeholder groups to companies - consumers and employees - to comprehend why, when and how they react to CR. Armed with this insight, it shows how companies can maximize the value of their CR initiatives by fostering strong stakeholder relationships to develop, implement and evaluate compelling social responsibility programs that generate value for both the company and its stakeholders.
