Among its key responsibilities, SOCOM plans and synchronizes operations against terrorist networks. Special operations forces (SOF) often operate alone in austere environments with only the items they can carry, which makes equipment size, weight, and power needs especially important. Specialized radios and supporting equipment must be carried by the teams for their radio-frequency (RF) operations. As warfighting demands on SOCOM have intensified, SOCOM's needs for significantly improved radio-frequency (RF) systems have increased. *Toward a Universal Radio Frequency System for Special Operations Forces* examines the current state of the art for both handheld and manpackable platform-mounted RF systems, and determines which frequencies could be provided by handheld systems. The book also explores whether or not a system that fulfills SOF's unique requirements could be deployed in a reasonable time period. Several recommendations are included to address these and other issues.

Francis, 2009-03 The DoD has spent an estimated \$12 billion on the dev't. and production of tactical radios over the last 5 years -- about as much as was spent producing Virginia Class submarines (\$10.8 billion) in the same period. Survivability and lethality in warfare are increasingly dependent on superior information and communication capabilities. DoD is counting on the Joint Tactical Radio System (JTRS) to deliver the breakthroughs in this area. At the same time as it is developing JTRS, DoD wants to ensure that current forces are equipped with sufficient legacy radios. harris an prc 152: *Stinger Missile Publications Combined: Manportable Air Defense (MANPAD) Technical And Doctrinal History From 1980 To 2018* U.S. Army, Over 2,800 total pages ... INTRODUCTION Today's operational environment presents threats the Army has not faced in nearly 20 years. Against peer competitors, the joint force may face air parity or even localized enemy air overmatch, challenging the assumption of air superiority the joint force has held since the Korean War. This will make maneuver forces vulnerable to air attack by fixed- and rotary-wing aircraft, unmanned aircraft systems, and cruise missiles. Maneuver forces lack capacity and capability to address these threats and the Army requires a speedy response. Stinger missiles provide a key capability for maneuver forces to defend themselves from aerial observation and attack. However, without direct involvement from senior brigade combat team leaders and effective leader training, these missiles will become dead weight at best or a fratricide in waiting at worst. Units must plan effectively to utilize this capability and ensure it ties directly to their scheme of maneuver as opposed to simply task-organizing one Stinger team per company. harris an prc 152: Technological Innovation and Defence: The Forza NEC Program in the Euro-Atlantic Framework Alessandro Marrone, Michele Nones, Alessandro R. Ungaro, 2016-04-30 Technological innovation and the military have always been in a state of constant interaction, fostered especially during the post-Cold War period. In this context, the present study focuses on the relationship of Italian, American, British, French and German Armed Forces with Information Communication Technology (ICT). The aim is to analyse in a Euro-Atlantic perspective the path undertaken by the Italian Army to develop Network Enabled Capabilities (NEC) through the "Forza NEC" Program. The acronym NEC refers to the interconnection of different elements of the Armed Forces in a single broad network, making them interact in order to achieve a strategic superiority. The book is composed of three chapters, which offer respectively an analysis of the American case, an overview of recent developments in France, Germany and the UK, and a discussion of the situation in Italy. The volume - which comes four years after the IAI publication *The Transformation of Armed Forces: The Forza NEC Program* - aims at analysing state of the art of the evolving relationship between technological innovation and the Armed Forces. This evolution is hindered by the fact that efforts to digitize and interconnect land forces and their equipment by using ICT sometimes clash with both operational difficulties and budget constraints. Such a clash poses challenges and roadblocks on the way towards NEC undertaken by the Armed Forces of the countries discussed in this book.
