rfi template pdf: Digital Asset Management for Museums Margaret C. McKee, Jessica Herczeg-Konecny, 2025-10-02 Our cultural heritage institutions live today in a world that persistently blends the alternating currents of the known and touchable world with an immediate and intimate digital unfolding with shapes and intentions beyond what we can know. These digital twins may start as just that – twins – but often quickly become different. A scan of a sculpture can be used for research, to deepen a visitor's sight of what's underneath, become a model for a licensed derivative destined for the gift shop, or help curators plan an exhibition. Our museum holdings throughout the world require careful management – from access, to storage, to conservation, and they create the wonder we experience in the hands of gifted museum staff. Our museums' digital assets demand the same level of attention, concern, legacy preservation as they embrace our minds and infuse experience from the invisible reach of ones and zeroes made manifest and all around us. This is the realization at the core of Digital Asset Management for Museums. The chapters in this book will guide readers through strategies for unlocking an asset's potential, implementing digital assets into cultural institutions successfully, managing potential failures in implementation, and training museum staff to utilize digital assets effectively. Digital asset management strategies consider the ever-evolving nature of technology, which makes this book's approach relevant to the needs of cultural institutions today as well as to institutions' needs for the future.

rfi template pdf: War and Governance Richard Weitz, 2011-10-05 An insightful and expert assessment examines how best to end—and avert—wars. How do we avoid war? To arrive at an answer, master analyst Richard Weitz explores the ways nations, international organizations, and individuals have sought to bring order to an inherently disorderly phenomenon—potential and actual violent conflict among organized political entities. Specifically, *War and Governance: International Security in a Changing World Order* analyzes a number of critical issues such as whether regional security institutions have distinct advantages and liabilities in promoting international security, as compared with universal organizations like the United Nations. Other important questions are addressed, as well. How will international organizations, such as the UN, EU, and NATO, change the nature of war in the 21st century—and be changed by it? What role might less formal institutions and nongovernmental organizations play in peacemaking? Will the nation-state remain the most important international security actor? The book ends with a gap analysis that identifies incongruities between international needs and capabilities—and suggests ways to overcome them.

rfi template pdf: Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt, 2017-08-08 This book combines elementary theory from computer science with real-world challenges in global geodetic observation, based on examples from the Geodetic Observatory Wettzell, Germany. It starts with a step-by-step introduction to developing stable and safe scientific software to run successful software projects. The use of software toolboxes is another essential aspect that leads to the application of generative programming. An example is a generative network middleware that simplifies communication. One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques. The complete software design of a satellite laser ranging system is taken as an example. Such automated systems are then combined for global interaction using secure communication tunnels for remote access. The network of radio telescopes is used as a reference. Combined observatories form coordinated multi-agent systems and offer solutions for operational aspects of the Global Geodetic Observing System (GGOS) with regard to "Industry 4.0".
