Overview of the Honda RSX Fuse System

The Honda RSX has two primary fuse locations:

1. Main Fuse Box (Under the Hood)
2. Interior Fuse Box (Cabin/Passenger Side)

Understanding the purpose and layout of each is crucial for effective diagnosis and repair.

Main Fuse Box (Under the Hood)

The main fuse box is typically located in the engine bay, near the battery or on the driver's side fender. It houses high-current fuses and relays that control critical engine functions and other major electrical systems.

Location and Access

- Usually found on the driver's side corner of the engine bay.
- Secured with a cover that can be removed by releasing clips or screws.
- Contains large fuses and relays.

Layout of the Main Fuse Box

The fuse box contains multiple slots, each assigned to specific functions. The diagram printed on the cover or in the vehicle's manual helps identify each fuse.

Typical Fuses and Relays in the Main Fuse Box:

- Engine Control Module (ECM) Fuse
- Fuel Pump Fuse
- Main Relay
- Cooling Fan Relay
- Horn Fuse
- Headlight Fuses
- Powertrain Control Module (PCM) Fuse

Interior Fuse Box (Cabin)

Located inside the vehicle, usually beneath the dashboard on the driver's side or in the glove compartment, the interior fuse box manages secondary systems.

Location and Access

- Found beneath the dashboard or behind a cover on the driver's side.
- The cover can be removed to access the fuse layout.
- Contains smaller fuses and sometimes relays.

Layout of the Interior Fuse Box

The interior fuse box's diagram is often printed on the cover or included in the owner's manual.

Common Fuses in the Interior Fuse Box:
