2019 vw maintenance schedule pdf: The UAW's Southern Gamble Stephen J. Silvia, 2023-05-15 The UAW's Southern Gamble is the first in-depth assessment of the United Auto Workers' efforts to organize foreign vehicle plants (Daimler-Chrysler, Mercedes-Benz, Nissan, and Volkswagen) in the American South since 1989, an era when union membership declined precipitously. Stephen J. Silvia chronicles transnational union cooperation between the UAW and its counterparts in Brazil, France, Germany, and Japan and documents the development of employer strategies that have proven increasingly effective at thwarting unionization. Silvia shows that when organizing, unions must now fight on three fronts: at the worksite; in the corporate boardroom; and in the political realm. The UAW's Southern Gamble makes clear that the UAW's failed campaigns in the South can teach hard-won lessons about challenging the structural and legal roadblocks to union participation and effectively organizing workers within and beyond the auto industry.

2019 vw maintenance schedule pdf: *Renewable Energy Production from Energy Crops and Agricultural Residues* Luigi Pari, 2021-03-04 *Energies* is open to submissions for a Special Issue on "Renewable Energy Production from Energy Crops and Agricultural Residues". Biomass represents an important source of renewable and sustainable energy production. Its increasing consumption is mainly related to the increase in global energy demand and fossil fuel prices, but also to a lower environmental impact compared to non-renewable fuels. These factors take RED II directives into consideration. In the past, forestry interventions were the main supply source of biomass, but in recent decades two others sources have entered the international scene. These are dedicated energy crops and agricultural residues, which are important sources of biomass for biofuel and bioenergy. Below, we consider four main value chains: • Oil crops: Oil production from non-food oilseed crops (such as camelina, Crambe, safflower, castor, cuphea, cardoon, etc.), oil extraction, and oil utilization for fuel production. • Lignocellulosic crops: Biomass production from perennial grasses (miscanthus, giant reed, switchgrass, reed canary grass, etc.), woody crops (willow, poplar, Robinia, eucalyptus, etc.), and agricultural residues (pruning, maize cob, maize stalks, wheat chaff, sugar cane straw, etc.), considering two main transformation systems: 1. Electricity/heat production 2. Second-generation ethanol production • Carbohydrate crops (cereals, sweet sorghum, sugar beets, sugar cane, etc.) for ethanol production. • Fermentable crops (maize, barley, triticale, Sudan grass, sorghum, etc.) and agricultural residues (chaff, maize stalks and cob, fruit and vegetable waste, etc.)
