a sand county almanac free pdf: *Animals and the Environment* Lisa Kemmerer, 2015-05-01 Contemporary Earth and animal activists rarely collaborate, perhaps because environmentalists focus on species and ecosystems, while animal advocates look to the individual, and neither seems to have much respect for the other. This diverse collection of essays highlights common ground between earth and animal advocates, most notably the protection of wildlife and personal dietary choice. If earth and animal advocates move beyond philosophical differences and resultant divergent priorities, turning attention to shared goals, both will be more effective - and both animals and the environment will benefit. Given the undeniable seriousness of the environmental problems that we face, including climate change and species extinction, it is essential that activists join forces. Drawing on a wide range of issues and disciplines, ranging from wildlife management, hunting, and the work of NGOs to ethics, ecofeminism, religion and animal welfare, this volume provides a stimulating collection of ideas and challenges for anyone else who cares about the environment or animals.

Montgomery, 2011-10-19 Regional Planning for a Sustainable America is the first book to represent the great variety of today's effective regional planning programs, analyzing dozens of regional initiatives across North America. The American landscape is being transformed by poorly designed, sprawling development. This sprawl—and its wasteful resource use, traffic, and pollution—does not respect arbitrary political boundaries like city limits and state borders. Yet for most of the nation, the patterns of development and conservation are shaped by fragmented, parochial local governments and property developers focused on short-term economic gain. Regional planning provides a solution, a means to manage human impacts on a large geographic scale that better matches the natural and economic forces at work. By bringing together the expertise of forty-two practitioners and academics, this book provides a practical guide to the key strategies that regional planners are using to achieve truly sustainable growth.

a sand county almanac free pdf: *Restoring Lands - Coordinating Science, Politics and Action* Herman Karl, Lynn Scarlett, Juan Carlos Vargas-Moreno, Michael Flaxman, 2012-02-03 Environmental issues, vast and varied in their details, unfold at the confluence of people and place. They present complexities in their biophysical details, their scope and scale, and the dynamic character of human action and natural systems. Addressing environmental issues often invokes tensions among battling interests and competing priorities. Air and water pollution, the effects of climate change, ecosystem transformations—these and other environmental issues involve scientific, social, economic, and institutional challenges. This book analyzes why tackling many of these problems is so difficult and why sustainability involves more than adoption of greener, cleaner technologies. Sustainability, as discussed in this book, involves knowledge flows and collaborative decision processes that integrate scientific and technological methods and tools, political and governance structures and regimes, and social and community values. The authors synthesize a holistic and adaptive approach to rethinking the framework for restoring healthy ecosystems that are the foundation for thriving communities and dynamic economies. This approach is that of collective action. Through their research and practical experiences, the authors have learned that much wisdom resides among diverse people in diverse communities. New collaborative decision-making institutions must reflect that diversity and tap into its wisdom while also strengthening linkages among scientists and decision makers. From the pre-publication reviews: “Finally, we have a book that explains how science is irrelevant without people. It’s people who decide when and how to use science, not scientists. This book gives us a roadmap for how to really solve complex problems. It involves hard work, and creating new relationships between scientists and the public that don’t typically exist in our society.” -John M. Hagan, Ph.D. President, Manomet Center for Conservation Sciences

a sand county almanac free pdf: *Radix Naturalis* Craig Cramm, 2020-10-30 The substance of this present work is liberation semiology. The world’s own principle is love (agape). Our fellow creatures are co-symbols of emancipation from human violence. Creation is not, as influential modern thinkers envision, mere material, mere nature, to commodify and dominate for the freedom of an exclusive constituency of our species. The ecological crisis emerges from a tragic misfit between experiments with secular sovereignty and the continuance of Christian historicity. Either the Christian form of life (of time) is replaced, revealing a new ecological worldview, or we revive Christian sovereignty as a creative fit with the actuality of Christian historicity. This work wagers on the latter: Christian civilization is coextensive with ecological civilization.

a sand county almanac free pdf: *Climate Change, Capitalism, and Corporations* Christopher Wright, Daniel Nyberg, 2015-09-23 Climate change is one of the greatest threats facing humanity, a definitive manifestation of the well-worn links between progress and devastation. This book explores the complex relationship that the corporate world has with climate change and examines the central role of corporations in shaping political and social responses to the climate crisis. The principal message of the book is that despite the need for dramatic economic and political change, corporate capitalism continues to rely on the maintenance of 'business as usual'. The authors explore the different processes through which corporations engage with climate change. Key discussion points include climate change as business risk, corporate climate politics, the role of justification and compromise, and managerial identity and emotional reactions to climate change. Written for researchers and graduate students, this book moves beyond descriptive and normative approaches to provide a sociologically and critically informed theory of corporate responses to climate change.

a sand county almanac free pdf: *The Protection of Traditional Knowledge at the Frontiers of Drug Discovery* Peter S Harrison, 2024-09-19 This book concerns the often fractious interface between drug discovery and commercialisation, environmental degradation, the biodiversity crisis, the exploitation of indigenous peoples and the destruction of their culture, the right to health, inequalities of power, and the ability of the law to protect knowledge. For millennia, medicinal plants

have provided a trove of treatments for human ailments, and the key to that treasure has been the traditional knowledge of the indigenous peoples who have lived alongside these plants. More recently that knowledge has been taken, often without consent or recompense, by Western science as a springboard for the development of pharmaceutical agents. As a response to threats to biodiversity and indigenous culture, international mechanisms have created, or are creating, enforceable rights for indigenous peoples to control such knowledge. With a background in pharmacology and molecular biology and significant experience as a lawyer in pharmaceutical and biotech patent litigation, the author brings a fresh perspective to understanding the difficulties of enforcing such rights and, in particular, examines whether there is a philosophically justifiable limit to the downstream scope of such rights. This book is aimed at all those with an interest in the control of indigenous genetic knowledge and the protection of indigenous culture, whether academics, anthropologists or pharmaceutical researchers, and those seeking to make indigenous rights work, as activists, legislators or practising lawyers.

a sand county almanac free pdf: Strategic Sustainability Daniel Fogel, 2016-03-22 Strategic Sustainability examines how organizations can implement environmental sustainability science, theories, and ways of thinking to become more competitive. Including examples and ideas implemented in various countries, it is based on known scientific principles about the natural world and organizational principles focusing on the work domain. The intersection of these two realms of research creates a powerful and new approach to comprehensive, seemingly contradictory issues. Daniel S. Fogel draws from disparate fields and creates a story about organizations, their future and how people are part of the problem and, more importantly, part of the solution. Readers will find ways to take action to improve organizations and avoid denigrating our natural environment, learning to be mindful of the urgency we should feel to improve our impact on the world. The focus on the natural environment provides a powerful focus for creating value in organizations and addressing the major challenges we all face. Advanced sustainability students, working professionals and board members, managers and legislators responsible for governing organizations or implementing public policy will find this book useful. A companion website features an instructor's manual with test questions, as well as 38, 10-minute videos for classroom use.

a sand county almanac free pdf: The Coming Good Society William F. Schulz, Sushma Ramen, 2020-06-09 "Challenge[s] all of us to think deeply about what kind of society we and our children and our children's children will want to live in." (Margaret L. Huang, former Executive Director, Amnesty International USA) A rights revolution is under way. Today the range of nonhuman entities thought to deserve rights is exploding. Changes in norms and circumstances require the expansion of rights: What new rights, for example, are needed if we understand gender to be nonbinary? Does living in a corrupt state violate our rights? When biotechnology is used to change genetic code, whose rights might be violated? What rights, if any, protect our privacy from the intrusions of sophisticated surveillance techniques? Drawing on their vast experience as human rights advocates, William Schulz and Sushma Raman challenge us to think hard about how rights evolve with changing circumstances, and what rights will look like ten, twenty, or fifty years from now. The Coming Good Society details the many frontiers of rights today and the debates surrounding them. Schulz and Raman equip us with the tools to engage the present and future of rights so that we understand their importance and know where we stand. "Thoughtful and provocative." —Human Rights Quarterly "[A] trail-blazing map through the new frontiers of rights . . . downright riveting." —Gloucester Times "An accessible primer for anyone who wishes to understand the current limitations in our notions of rights and the future challenges for which we

must prepare.” —Kerry Kennedy, President, Robert F. Kennedy Human Rights “Schulz and Raman outline brilliantly where [human rights] growth may take rights in the generations to come.” —Zeid Ra’ad al-Hussein, former United Nations High Commissioner for Human Rights

a sand county almanac free pdf: *Climate Change and Liberal Priorities* Gideon Calder, Catriona McKinnon, 2013-09-13 Can, and should, liberalism make itself hospitable to a politics which does justice to climate change? To what extent are the values, methods, and assumptions of liberalism adaptable to the challenges raised? Liberal thinking – broadly construed – may dominate the Academy and the political landscape. Are the environmental priorities that are thrown into relief by climate change a threat to it, or are they an opportunity for it to show its worth? This book explores fresh arguments by leading scholars, both of whom are sceptical of liberalism’s capacity to meet these challenges, and sympathetic to the project of developing liberal values so as to create a liberal approach that can deliver climate change justice. The chapters appeal to new insights and considerations reveal the complexity of the issues at stake in the real world of climate change politics.
