ashrae 170 pdf: *Creating Healthy and Sustainable Buildings* Mateja Dovjak, Andreja Kukec, 2019-05-28 The open access book discusses human health and wellbeing within the context of built environments. It provides a comprehensive overview of relevant sources of literature and user complaints that clearly demonstrate the consequences of lack of attention to health in current building design and planning. Current designing of energy-efficient buildings is mainly focused on looking at energy problems and not on addressing health. Therefore, even green buildings that place environmental aspects above health issues can be uncomfortable and unhealthy, and can lead to public health problems. The authors identify many health risk factors and their parameters, and the interactions among risk factors and building design elements. They point to the need for public health specialists, engineers and planners to come together and review built environments for human wellbeing and environmental sustainability. The authors therefore present a tool for holistic decision-making processes, leading to short- and long-term benefits for people and their environment.

ashrae 170 pdf: Infections and Pregnancy Sumita Mehta, Anshul Grover, 2022-03-25 This book is a complete guide to the diagnosis and management of any infectious disease which may affect the mother or the fetus during pregnancy. Pregnancy is a unique condition in which the interplay of endocrine and immune influences leads to altered severity and susceptibility to infectious diseases. These infections, in turn, are a substantial cause of maternal and perinatal morbidity. The book discusses the immunologic, clinical and epidemiologic evidence for altered responses during pregnancy. Several infections have unique consequences in pregnancy. Some infections have vertical transmission, and their management focuses on decreasing perinatal transmission. Others can be transmitted transplacentally and cause congenital infection. While still, other common infections like gastroenteritis, UTI, tuberculosis, leprosy or certain dermatological and oral conditions can cause pregnancy complications. This book discusses all such diseases in detail as well as suggests means for early identification and appropriate treatment for them. A separate chapter adequately covers the novel coronavirus infection associated with management challenges in pregnant women. The book includes dedicated sections on postpartum infections and fetal outcomes associated with maternal infections. It reviews strategies to prevent infection in obstetrics that plays a key role in decreasing the global burden of maternal morbidity and mortality. The book is relevant for practicing obstetricians and gynecologists, post-graduate students of obstetrics and gynecology as well as general practitioners, family medicine specialists, primary health care workers and undergraduate medical students.

ashrae 170 pdf: Office Buildings Pranab Kumar Nag, 2018-12-31 This book brings together concepts from the building, environmental, behavioural and health sciences to provide an interdisciplinary understanding of office and workplace design. Today, with changes in the world of work and the relentless surge in technology, offices have emerged as the repositories of organizational symbolism, denoted by the spatial design of offices, physical settings and the built environment (architecture, urban locale). Drawing on Euclidian geometry that quantifies space as the distance between two or more points, a body of knowledge on office buildings, the concept of office and office space, and the interrelationships of spatial and behavioural attributes in office design are elucidated. Building and office work-related illnesses, namely sick building syndrome and ailments arising from the indoor environment, and the menace of musculoskeletal disorders are the alarming manifestations that critically affect employee satisfaction, morale and work outcomes. With a focus on office ergonomics, the book brings the discussion on the fundamentals of work design, with emphasis on computer workstation users. Strategic guidance of lighting systems and visual performance in workplaces are directed for better application of ergonomics and improvement in office indoor environment. It discusses the profiles of bioclimatic, indoor air quality, ventilation intervention, lighting and acoustic characteristics in office buildings. Emphasis has been given to the energy performance of buildings, and contemporary perspectives of building sustainability, such as green office building assessment schemes, and national and international building-related standards and codes. Intended for students and professionals from ergonomics, architecture, interior design, as well as construction engineers, health care professionals, and office planners, the book brings a unified overview of the health, safety and environment issues associated with the design of office buildings.
