lifetime learning well answers: *Education* Andrew J. Courtice An American Citizen, 2016-02 Despite the expenditure of over \$607.2 billion yearly and the best professional efforts of over 3.1 million teachers (statistics from the Center for Educational Reform, 2011), and several recent major Department of Education Programs purported to solve all our educational shortfalls in short order, the American Educational System (AES) continues to fail virtually all American students with unsatisfactory educational outcomes that will last lifetimes and deeply impact our global presence. This inability to implement much needed change occurs because at its root the AES is a series of "givens" that have created a caste-like situation where students are unable to perform to their potential because of inflexible system constraints. This book proposes a new paradigm for the AES, based on existing capabilities aimed directly at the American ideal of life, liberty, and happiness (read that as preparation for opportunity and life) for every student. Interestingly, the resulting solutions can be achieved within the existing resources and capabilities. The author structured this book into three highly documented step-by-step discussions: 1) A review of the elements of today's caste environment that require attention; 2) A discussion of the paradigm elements that are needed to change the AES culture and environment; and 3) A vision of how these changes would impact the entire AES as a system, not just as single focuses that always seem to miss the mark. Chapter by chapter, the text builds a case for establishing an AES that is so successful that it would be virtually invisible within the American Democracy we all seek to prosper in and enjoy.

lifetime learning well answers: *Behavioral Public Finance* Edward J. McCaffery, Joel Slemrod, 2006-01-23 Behavioral economics questions the basic underpinnings of economic theory, showing that people often do not act consistently in their own self-interest when making economic decisions. While these findings have important theoretical implications, they also provide a new lens for examining public policies, such as taxation, public spending, and the provision of adequate pensions. How can people be encouraged to save adequately for retirement when evidence shows that they tend to spend their money as soon as they can? Would closer monitoring of income tax returns lead to more honest taxpayers or a more distrustful, uncooperative citizenry? Behavioral Public Finance, edited by Edward McCaffery and Joel Slemrod, applies the principles of behavioral economics to government's role in constructing economic and social policies of these kinds and suggests that programs crafted with rational participants in mind may require redesign. Behavioral Public Finance looks at several facets of economic life and asks how behavioral research can increase public

welfare. Deborah A. Small, George Loewenstein, and Jeff Strnad note that public support for a tax often depends not only on who bears its burdens, but also on how the tax is framed. For example, people tend to prefer corporate taxes over sales taxes, even though the cost of both is eventually extracted from the consumer. James J. Choi, David Laibson, Brigitte C. Madrian, and Andrew Metrick assess the impact of several different features of 401(k) plans on employee savings behavior. They find that when employees are automatically enrolled in a retirement savings plan, they overwhelmingly accept the status quo and continue participating, while employees without automatic enrollment typically take over a year to join the saving plan. Behavioral Public Finance also looks at taxpayer compliance. While the classic economic model suggests that the low rate of IRS audits means far fewer people should voluntarily pay their taxes than actually do, John Cullis, Philip Jones, and Alan Lewis present new research showing that many people do not underreport their incomes even when the probability of getting caught is a mere one percent. Human beings are not always rational, utility-maximizing economic agents. Behavioral economics has shown how human behavior departs from the assumptions made by generations of economists. Now, Behavioral Public Finance brings the insights of behavioral economics to analysis of policies that affect us all.
