acls book 2020 pdf: Islamic Finance and Sustainable Development Abdulkader Thomas, 2025-01-23 The proliferation of energy, agricultural, water and food insecurity can be attributed to a multitude of factors, including advancements in technology that have facilitated the technical and economic utilization of energy and water resources, environmental degradation, climate anomalies, mounting pressure on water resources due to escalating demand, and surging energy requirements. These challenges have been addressed from multiple perspectives, ranging from Islamic social finance to large scale project finance. Large corporations are also involved in tackling the environmental impact of climate change or operating in water stressed regions. This book argues, however, that there is little value to be gained from this activity when sustainability initiatives and frameworks are not being measured. The book surveys Islamic finance and sustainability theories, setting the stage to detail the actual work of businesses, banks, non-governmental organizations (NGOs), and multilateral agencies addressing water, food and energy insecurity. It examines case studies, which cover diverse aspects of sustainability, mostly, in the context of fragile economic and ecological situations, and discusses practical cases from an Islamic perspective, in which local and regional problems are addressed. An important feature of the book is the description of how Islamic social finance builds pathways to scale for the mobilization of funds as well as the expansion of sustainable ventures. Further, the unique issues of carbon markets are explored from the perspective of Shariah compliance as well as managing adverse events. The cases present replicable, scalable solutions. These unique stories align theory to reality and sometimes, they highlight the shortfalls in the theory. The cases allow researchers, academics and policy makers an

opportunity to examine the effectiveness of theories and policies opposite real-life experiences and also give business and NGO leaders clear examples to follow.

Books and Social Media considers the way in which readers and writers come together in digital communities to discover and create new works of fiction. This new way of engaging with fiction stretches the boundaries of what has been considered a book in the past by moving beyond the physical or even digitally bound object to the consideration of content, containers, and the ability to share. Using empirical data and up-to-date research methods, Miriam Johnson introduces the ways in which digitally social platforms give rise to a new type of citizen author who chooses to sidestep the industry's gatekeepers and share their works directly with interested readers on social platforms. Gender and genre, especially, play a key role in developing the communities in which these authors write. The use of surveys, interviews, and data mining brings to the fore issues of gender, genre, community, and power, which highlight the push and pull between these writers and the industry. Questioning what we always thought we knew about what makes a book and traditional publishing channels, this book will be of interest to anyone studying or researching publishing, book history, print cultures, and digital and contemporary literatures.
