acls provider manual 2020 pdf: Textbook of Patient Safety and Clinical Risk Management Liam Donaldson, Walter Ricciardi, Susan Sheridan, Riccardo Tartaglia, 2020-12-14 Implementing safety practices in healthcare saves lives and improves the quality of care: it is therefore vital to apply good clinical practices, such as the WHO surgical checklist, to adopt the most appropriate measures for the prevention of assistance-related risks, and to identify the potential ones using tools such as reporting & learning systems. The culture of safety in the care environment and of human factors influencing it should be developed from the beginning of medical studies and in the first years of professional practice, in order to have the maximum impact on clinicians' and nurses' behavior. Medical errors tend to vary with the level of proficiency and experience, and this must be taken into account in adverse events prevention. Human factors assume a decisive importance in resilient organizations, and an understanding of risk control and containment is fundamental for all medical and surgical specialties. This open access book offers recommendations and examples of how to improve patient safety by changing practices, introducing organizational and technological

innovations, and creating effective, patient-centered, timely, efficient, and equitable care systems, in order to spread the quality and patient safety culture among the new generation of healthcare professionals, and is intended for residents and young professionals in different clinical specialties.

acls provider manual 2020 pdf: *Antimicrobial Resistance and Therapy in Critically Ill Patients* Jian-cang Zhou, Lei Fang, Fuhong Su, 2023-11-02 The Centers for Disease Control and Prevention of the United States has deemed extended-spectrum β -lactamases (ESBLs)-producing Enterobacterales and multidrug-resistant (MDR) *Pseudomonas aeruginosa* as serious threats and carbapenem-resistant (CR) Enterobacterales (CRE) and CR *Acinetobacter* as urgent threats. Due to the prevalent drug resistance of these strains and lack of antimicrobial alternatives, the treatment of infections caused by these MDR Gram-negative pathogens rely on tigecycline, polymyxins (colistin and polymyxin B) or new β -lactam/ β -lactamase inhibitor combinations (such as ceftazidime-avibactam, CAZ/AVI). However, the critically ill patients with antimicrobial infection are associated with high mortality. Hence, the prevalence and optimal therapy for critically ill patients with antimicrobial resistance are worth further study.
